# Co-Administration

- You may administer COVID-19 and Influenza vaccines without regard to timing (both live, attenuated and non-live influenza vaccines).
- This includes administration of COVID-19 and Influenza vaccines on the same day, as well as co-administration at any time interval.
- Administer the COVID-19 vaccines and vaccines that may be more likely to cause a local reaction (i.e., adjuvanted influenza vaccines) in different limbs, if possible.
- When deciding whether to co-administer other vaccine(s) with COVID-19 vaccine, consider:
  - Whether the patient is behind or at risk of becoming behind on recommended vaccines
  - The patient's risk of vaccine-preventable disease
  - The reactogenicity profile of the vaccines
  - The likelihood of avoiding a missed opportunity to vaccinate
