

NEVER
touch a BAT with
your BARE HANDS!

Bats can have **RABIES**

 You can't tell if a bat has rabies just by looking at it!

 Any bat can have rabies, which is a DEADLY disease.

 If a bat is down, it may be sick with rabies.

 A bat that lets you touch it may be sick and bite you.

 If you see a bat, DON'T TOUCH IT WITH YOUR BARE HANDS!

(Refer to our "I've Found a Bat..." infographic for instructions on how to safely capture and release.)
