

OKLAHOMA **Department** **of Labor**

ANNUAL ASBESTOS REPORT

February 2025

The Oklahoma Department of Labor (ODOL) submits the following annual report to the Honorable Lonnie Paxton, President Pro Tempore of the Oklahoma State Senate and the Honorable Kyle Hilbert, Speaker of the Oklahoma House of Representatives. This report details the number of asbestos-related inspections conducted and the number of asbestos licenses issued by ODOL personnel. Additionally, this report provides for the amount per agency of all state, federal, and local funds received, directly or indirectly, for asbestos abatement during the FY2024 period.

Two regulatory state agencies, the Oklahoma Department of Labor (ODOL) and the Oklahoma Department of Environmental Quality (DEQ), have jurisdiction over asbestos-containing materials in the State of Oklahoma.

ODOL has responsibility for verification of training and the issuance of licenses to asbestos workers and contractors, for setting minimum asbestos abatement standards and for inspecting asbestos abatement projects to determine compliance with those standards. ODOL also has the responsibility, through a Federal grant from EPA, to administer the Asbestos Hazard Emergency Response Act (AHERA) for public and private schools and public and commercial buildings.

In FY2024, ODOL performed **840** Compliance Inspections on asbestos abatement projects, **8** Consultation inspections, **2** Investigation inspections, and **22** leased building inspections. In FY2023-24 through a cooperative agreement and grant with EPA, the Asbestos Division completed **24** AHERA inspections of K-12 public and private schools and **80** Oklahoma Accreditation/Training inspections (EPA FY Oct. 1, 2023, to Sept. 30, 2024). ODOL licensed **38** Asbestos Contractors, **26** Project Designers, **30** Management Planners, **102** Supervisors, **272** Inspectors, and **334** Workers.

Income from license fees, abatement project fees and O&M fees totaled **\$452,050.00** in FY2024. The federal FY2024 cooperative grant with EPA included **\$84,000.00**, from federal funds and a required 25% match of **\$28,000.00** from the state.

Asbestos abatement consists of the enclosure, encapsulation, or removal of asbestos. An enclosure is the construction of an air-tight barrier around the asbestos. Encapsulation consists of spraying the asbestos with a coating that penetrates the asbestos fibers and binds them together or forms an air-tight skin over the material. These methods are so little used, however, that it is generally accurate to consider abatement to be removal.
