Re: Form 1071

Dear Ms. Adams:

On November 25, 1985 we submitted OCC Form 1071 to the Commission to include our most recent salt water disposal well, the Carpenter No. 1-8 SWD. At that time we inadvertently omitted the Swinger #1-4 SWD which had been reported on previous 1071's.

Enclosed please find our corrected Form 1071 which is a complete inventory of our existing disposal wells at this time.

Thank you.

Sincerely,

Shirley Porter

ANALYST [illegible]

[1] Reported as $CaCO_3$.

[2] Concentrations will be determined if justified specifically or as part of statewide public water supply monitoring program.

[3] Total, includes dissolved and suspended fractions.

A brief discussion of the relative significance is on the reverse side.

ODH Form No. 813

Significance of Water Supply Analysis

Total Hardness is generally considered to be an expression of the relative amount of soap required to produce a suds or lather. Waters with a Total Hardness less than 75 mg/l are considered to be soft, between 75 and 150 mg/l are moderately hard, 150 to 300 mg/l are hard, and greater than 300 mg/l are very hard. Excessive hardness may cause laundering difficulties or produce scale in hot water tanks and cooking utensils. Hard waters are as satisfactory for human consumption as soft waters, except for the economically detrimental effects. The components of Total Hardness may be classified in two ways: (1) with respect to the metallic cations which cause by far the greatest portion of hardness in natural waters, Calcium (Calcium Hardness) and Magnesium (Magnesium Hardness); and (2) with respect to the anions associated with the metallic cations, Carbonate Hardness and Non-Carbonate Hardness (or temporary and permanent hardness, respectively). The major cause of hardness problems is Carbonate Hardness. Hardness is generally derived from the natural accumulation of salts from contact with soil and geological formations, principally limestone, dolomite, and gypsum.

Total Alkalinity is a measure of the buffering capacity, or the ability to resist sudden changes in pH. Within the range of 30 to 500 mg/l, Total Alkalinity should be that value which from experience is satisfactory for a particular water supply. Frequent variations from normal values would be detrimental to water supply processing mechanisms. "P" Alkalinity measures a portion of the Total Alkalinity and enables one to determine the levels of the component parts of Total Alkalinity, namely Hydroxide, Carbonate, and Bicarbonate. Waters with a low alkalinity and a pH approaching pH 7 may have a tendency to corrode water lines. Bicarbonates in combination with Calcium and Magnesium form scale in hot water units.

The recommended upper limit for Dissolved Solids is 500 mg/l and waters over that value should not be used if less mineralized supplies are available. Alkalinity, Chloride, and Sulfate are primarily responsible for Dissolved Solids content.

High Nitrate concentrations may cause methemoglobinemia (blue baby). An upper limit of 45 mg/l has been recommended. The source(s) of Nitrate may be soil, sewage, and/or fertilizer.

Iron and/or Manganese may stain laundry, utensils, and sinks a reddish-brown as well as produce reddish to black colored water. Limits of 0.3 mg/l for Iron and 0.05 mg/l for Manganese have been recommended.

Excessive concentrations of Sulfate in water may act as a laxative to unaccustomed consumers. A bitter epsom taste is often associated with high Sulfate concentrations. The recommended maximum is 250 mg/l.

Chloride, a major constituent of common table salt, may impart a salty taste. An upper limit of 250 mg/l has been recommended.

The Hydrogen ion concentration expressed as pH and the Hydroxyl ion concentration expressed as pOH reflect the acidity or basicity of a water. It is normally desirable to maintain a pH somewhat above pH 7.0 as corrosiveness tends to increase with decreasing pH.

FORM NO. 1000 1973(REV.) FILE IN DUPLICATE

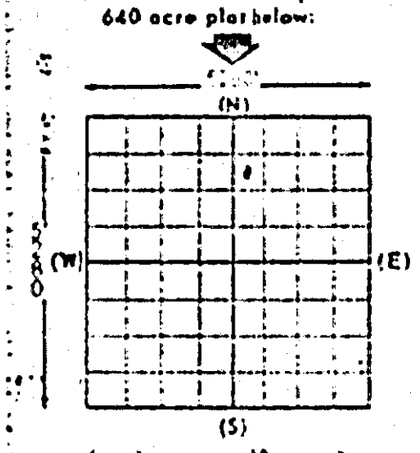

NOTICE OF INTENTION TO: ( ) DRILL ( ) DEEPEN (X) PLUG-BACK ( ) OTHER - Describe _____

INSTRUCTIONS
(please follow)

Rule 3-201 -- Order No. 94618

API No. 35-071-20,464

Spot well location and outline lease boundary on 640 acre plat below:

(each square 10 acres)

Spacing Order No. _____

Exception Order No. _____

(X) No ( ) Yes Order No. _____

(1) Indicate above by (X) type of operation intended - two cards to each well.
(2) Record spacing order number and location exception order number below.
(3) Consult rules regarding Logs, Blowout Preventers and Surface Casing.
(4) Use Form No. 1001 to report intention to plug a well.
(5) Use Form No. 1002A to file well record.
(6) This card void if drilling not started within six (6) months.

COUNTY Kay DATE 1-21 19 74

WELL LOCATED IN THE SW ¼ OF THE SW ¼ OF THE NE ¼

SECTION 31 TOWNSHIP 27N RANGE 2E

WELL TO BE DRILLED 1650 FT. FROM SL OF ¼ SEC. & 330 FT. FROM WL OF ¼ SEC.

WELL WILL BE LOCATED 330 FEET FROM NEAREST LEASE LINE

ESTIMATED TOTAL DEPTH 3625 IN THE Skinner Sand FORMATION

OPERATOR Dave Morgan Oil Co.

ADDRESS Box 820 CITY Blackwell STATE Okla ZIP 74631

LEASE NAME Minnie Schmitt WELL NO. 4 GROUND ELEVATION _____

DATE OPERATION TO BEGIN immediately SURFACE CASING DEPTH _____

DRILLING EQUIPMENT TO BE USED: ROTARY _____ CABLE _____

A SECURED OPERATOR'S AGREEMENT HAS BEEN FILED _____ YES _____ NO

RETURN TO:

OPERATOR OR AGENT Dave Morgan

ADDRESS Box 820 CITY Blackwell STATE Okla ZIP 74631

DO NOT WRITE IN THIS SPACE. FOR USE OF CONSERVATION DIVISION ONLY. (RULE 3-204, CCO NO. 94418)

When signed by authorized agent of Conservation Division will constitute approval for the commencement of drilling operations provided that the operator and or drilling contractor observes all special and general orders of the Corporation Commission applicable to this well.
