## Executive Summary

---

The Oklahoma Department of Mental Health and Substance Abuse Services (ODMHSAS) analyzed data from 36 Adult Drug and DUI Courts operating in 50 counties within Oklahoma. This included active participants beginning July 1, 2001 through June 30, 2005, totaling 3,532 participants.

### Drug Court Participant Characteristics at Entry:

- 34 is the average age;
- 66.2% were Caucasian;
- 68.5% were male;
- 39.3% were employed with full-time positions;
- \$633.31 was the average monthly income;
- 67.7% had a high school diploma;
- 26.6% were married;
- 67.9% had at least one child;
- 46.5% received prior alcohol or other drug treatment;
- At least 12.3% were diagnosed with a chronic mental health problem and 14.9% had a chronic medical problem;
- 48.0% pled guilty to Drug Possession (this offense, which was the most frequently occurring among drug court participants, accounted for 19.5% of all prison receptions in FY'05);
- 35.8% had no prior felony convictions (this decreased to 29.5% for FY'05 participants). Typically, prison-bound offenders have prior felony convictions, although it is possible that other extenuating factors such as numerous prior arrests, misdemeanors, or a sentence that is about to be revoked may cause some offenders with no priors to be prison-bound; and
- Top drugs of choice were Methamphetamine (30.8%), Alcohol (26.5%), or Cannabis (20.0%).

### Outcomes:

To determine whether drug courts are effective and successful, outcomes must be assessed. The retention rate for Oklahoma's drug courts, which includes active and graduate participants, was 75.2% for the period studied. That is higher than the national retention rate for drug courts, which is 67-71%, according to the National Drug Court Institute.

**To assess outcomes among drug court graduates, comparisons were made between graduates' characteristics at entry and at graduation on a number of indicators. The findings are as follows:**

- there was a 84.4% decrease in unemployment;
- there was a 59.7% increase in income;
- there was a 19.5% decrease in the percent of participants without a high school diploma;
- there was a 20.5% increase in the number of participants who had children living with them; and
- graduates with methamphetamine as their drug of choice had better outcomes on unemployment, income, and child custody, than graduates with another drug of choice.

**Comparing the recidivism rate, measured by re-arrest, of drug court graduates to that of successful standard probation offenders or released prison inmates indicates the following:**

- drug court graduates were 63% less likely to be re-arrested than successful standard probation offenders; and
- drug court graduates were more than two times (or 131%) less likely to be re-arrested than released prison inmates.

**Findings on other performance and outcome measures indicate the following:**

- Drug use, as measured by drug tests, decreased as participants progressed through drug court;
- 53 infants were born to drug court participants;
- 86 infants were born to the partners of drug court participants;
- 58 participants earned their GED;
- 55 participants received other degrees including Vocational/Professional Certificate, Associates Degree, Bachelors or Graduate Degree;
- the statewide average length of drug court for graduates was 19 months, with a range from 14 months in Payne County and Tulsa DUI Court to 31 months in McClain County; and
- the statewide average length of drug court for those participants who terminated was 13 months, with a range from 4 months in Grady County to 39 months in McClain County.

**Cost Effectiveness:**

A cost comparison model was developed to analyze the cost of sending 3,532 offenders (the number of participants analyzed during the reporting time period) to drug court, instead of prison. The model is based on the performance of the courts during the last 4 years, in which drug court graduates were more than four times less likely to be re-incarcerated than released prison inmates. The model indicates that the 4-year cost to the Oklahoma Department of Corrections, if drug court did not exist, is \$87,123,725.

The medical and social costs required to care for a drug-exposed infant are estimated at \$250,000 in the first year of life. Data indicates that at least 13 drug-free infants were born between July 2001 - June 2005, which resulted in preventing costs totaling \$3,250,000.

**Sentencing:**

- When offenders entered a plea to participate in drug courts, 62.6% received a delayed imposition of prison sentence (i.e., the prison sentence was not imposed if the participant completed drug court), while 25.7% of participants received a deferred judgment or a suspended sentence.
- If participants successfully completed drug court, their case was dismissed 58.1% of the time, while 29.1% received a deferred judgment or suspended sentence.
- There was wide variance in the average length of the failure prison sentence given at entry (i.e., the sentence participants would be required to serve if they failed drug court). The range was 17 months in Creek County to 281 months in Ottawa County, while the statewide average was 80 months.

**Intermediate Sanctions:**

A key component of Drug Court is that rule violations, including substance abuse relapse, result in swift and certain sanctions, though not immediate termination to prison.

- The most frequent violation resulting in a sanction was positive drug tests at 22.0%. The next two most frequent violations involved missing group treatment sessions and missing drug tests. The top three violations accounted for 49.8% of all the violations.
- The most frequently given sanction was jail incarceration, which was followed by community service. These two sanctions accounted for 63.5% of the sanctions given.

## Background on Drug Courts

---

### What is a Drug Court?

Drug court is a district court-supervised substance abuse treatment program that offers nonviolent, felony drug offenders an opportunity to return to the community as productive members of society instead of being incarcerated in prison.

Drug court is a team that includes a district court judge, district attorney, defense counsel, coordinator, substance abuse treatment provider, and law enforcement. The team puts aside traditional adversarial roles to focus on the best interests of the participant. The success of every drug court depends upon each member of the team approaching the participant in a non-adversarial, problem-solving way.

All drug courts share common elements:

- Rapid Intervention
- Non-Adversarial Court Approach
- Immediate Treatment
- Coordinated Team
- Program Phases
- Staffing & Status Hearing
- Drug Testing & Supervision
- Sanctions & Incentives
- Termination
- Graduation

However, no two drug court programs are exactly alike. Drug courts must address the unique needs of the jurisdiction in which they exist, taking into account local resources, political realities, and the traits of the participants. For that reason,

drug court programs are designed at the local level with the resources and perspectives of a particular community.

Drug courts create an environment of clear and certain rules. The rules are definite, easy to understand, and most important, within the individual's control to comply. The rules are based on the participant's measurable performance. For example, the participant appears in court or does not, attends treatment sessions or does not; drug tests reveal drug use or abstinence. Performance is immediately and directly communicated to the judge, who rewards progress or punishes noncompliance. Drug court establishes an environment that the participant can understand – a system in which clear choices are presented and individuals are encouraged to take control of their own recovery.

An individual enters drug court by pleading guilty to a specific charge. Reception to prison is delayed pending a plea agreement between the drug court and the offender, who agrees to program rules. In exchange for successful completion of the treatment program, the court often dismisses the original charge. However, for repeated noncompliance with the program, an individual is swiftly terminated from the program and sent directly to prison.

### National History

In 1989, the drug court concept was developed in Dade County (Miami, Florida) stemming from a federal mandate to reduce the inmate population or suffer the loss of federal funding. It was determined that a large majority of inmates had been incarcerated because of drug charges and were revolving back through the criminal justice system because of

underlying problems of drug addiction. It was decided that the delivery of treatment services needed to be linked with the criminal justice system and the need for strong judicial leadership and partnerships to bring treatment services and the criminal justice system together. Today, according to the National Drug Court Institute (NDCI), over 1,600 Adult Drug/DUI Courts are either operational or in planning in all 50 states, plus the District of Columbia, Puerto Rico, and Guam. In fact, the intensive judicial supervision and team approach has proven so successful with drug court that it has lead to the development of similar approaches to deal with other issues, such as mental illness (Mental Health Court), domestic violence (Domestic Violence Court), gambling (Gambling Court), school absenteeism (Truancy Court), prison drug offender reintegration (Re-Entry Drug Court), and a host of other problems addressed through a wide variety of problem solving courts.

### **Oklahoma History**

In 1995, Oklahoma's first drug court started in Payne County. It was followed in 1996 by Tulsa County and Creek County. Oklahoma's drug court initiative grew with the passage of the Oklahoma Drug Court Act in 1997. The Act gave broad powers to drug court teams to assist nonviolent, felony drug offenders across Oklahoma. The Oklahoma Juvenile Drug Court Act followed in 1998, along with a legislative appropriation to partially defray cost of treatment for indigent offenders. Today, Oklahoma has 36 Adult Drug/DUI Courts in operation and 6 in planning. Additionally, Oklahoma has 12 Juvenile/Family Drug Courts.

Recognizing the need to evaluate drug courts, the ODMHSAS developed a data collection and evaluation process. A management information system (MIS) has been implemented, allowing efficient data collection and the development of reports for existing and new drug courts. Data

collection allows outcome and performance measures regarding the effectiveness of Oklahoma drug courts to be tracked, which culminates in this report, published yearly.

# Statistical Definitions

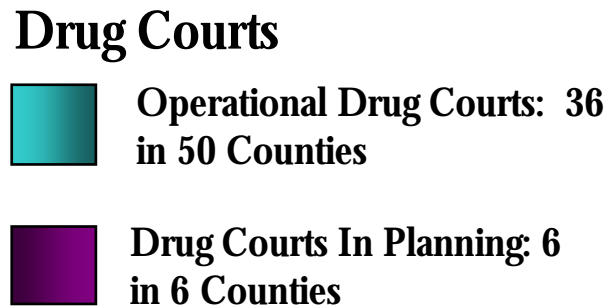

<b>Mean -</b>	An average, computed by summing the values of several observations and dividing by the number of observations.
<b>Median -</b>	An average, representing the value of the "middle" case in a rank-ordered set of observations.
<b>Mode -</b>	An average, representing the most frequently observed value or attribute.

---

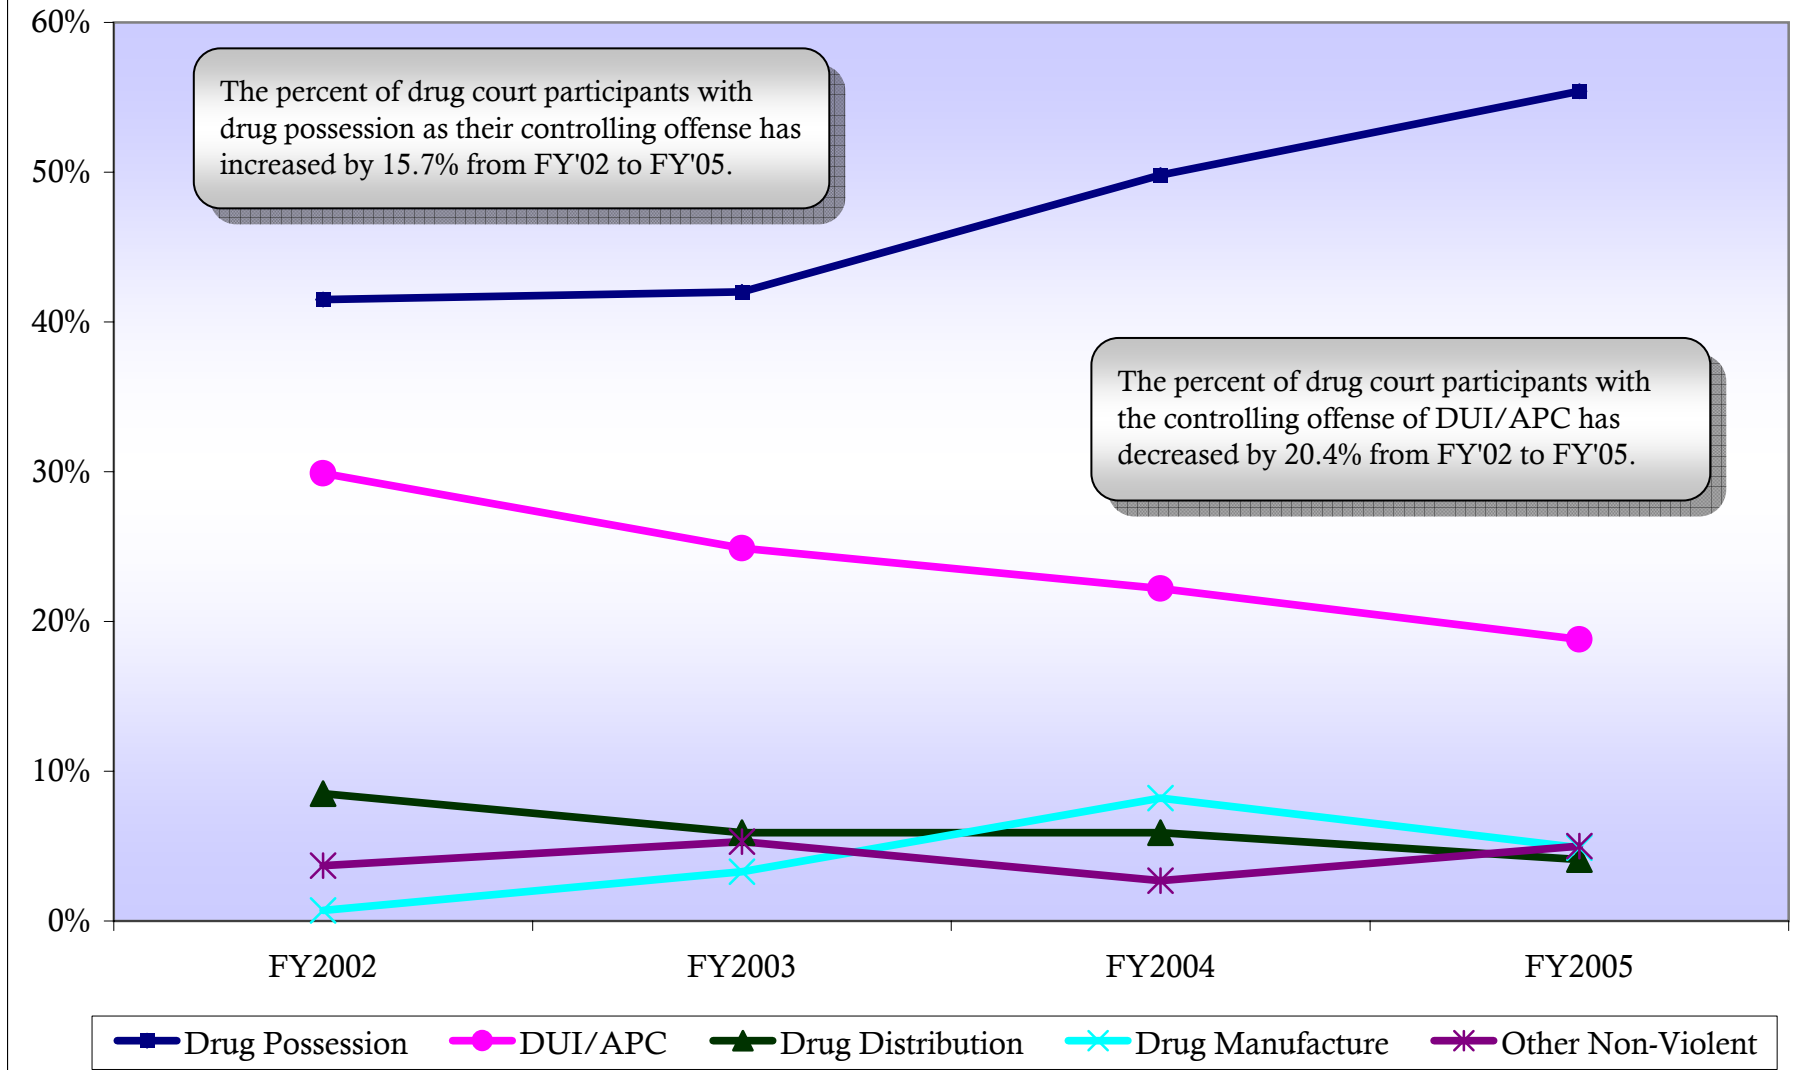

# Criminal Justice Definitions

<b>Deferred Judgment -</b>	Includes a probation sentence, typically for first time, non-violent offenders, under which the offender's record is expunged once the sentence is completed.
<b>Suspended Sentence -</b>	Includes a prison sentence that has been suspended (i.e., is not executed), allowing the offender to serve the sentence under probation (provisional freedom, usually under DOC supervision).
<b>Delayed Imposition of Sentence -</b>	Includes offenders convicted of a felony, whose sentence has been delayed. During this delay of sentence the offender generally completes some program (drug court) as required by the court. Upon completion or failure of said program, the court may sentence the offender or dismiss the charges.
<b>Prison -</b>	Includes offenders sentenced to the DOC in a state correctional facility. Once the offenders have completed their sentences, they are released without supervision. Paroled inmates are supervised until their sentence expires.
<b>Split Sentence -</b>	Includes both a period to be served with the DOC in a state correctional facility and a suspended probation sentence. Once offenders have completed their sentences in prison, they are released to probation for the remainder of the sentence, contingent upon lawful behavior.
<b>DUI/APC -</b>	Includes driving under the influence or having actual physical control of a vehicle in an impaired state.
<b>Drug Other -</b>	Includes obtaining drugs by fraud, cultivation of drugs, maintaining a place where drugs are kept, and possession of precursor substances.
<b>Other Non-Violent -</b>	Includes unauthorized use of a motor vehicle, eluding an officer/running a road block, making false statements to a pawn broker, omitting to provide for a minor child, conspiring to commit a felony, and other non-violent offenses not accounted for in other categories.

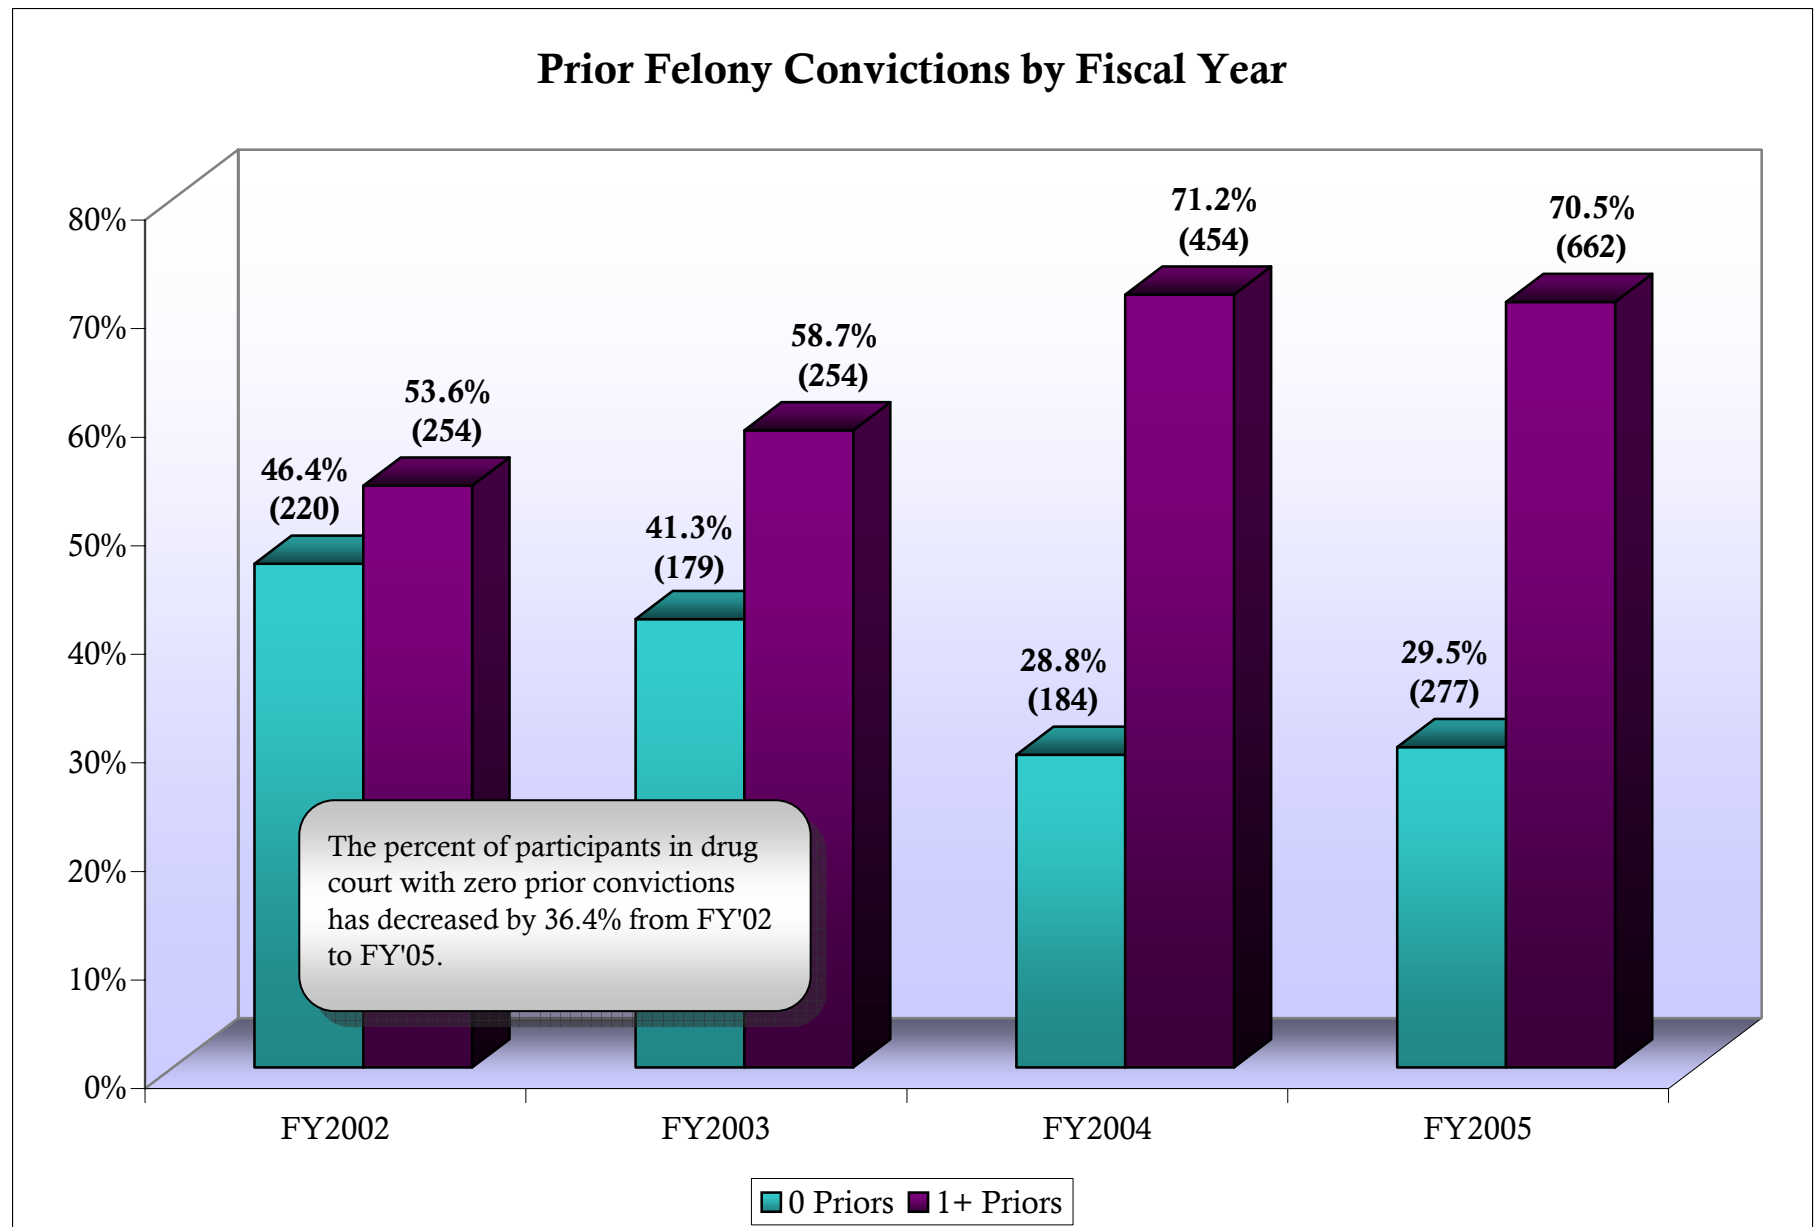

## Top Five Felony Charges by Fiscal Year

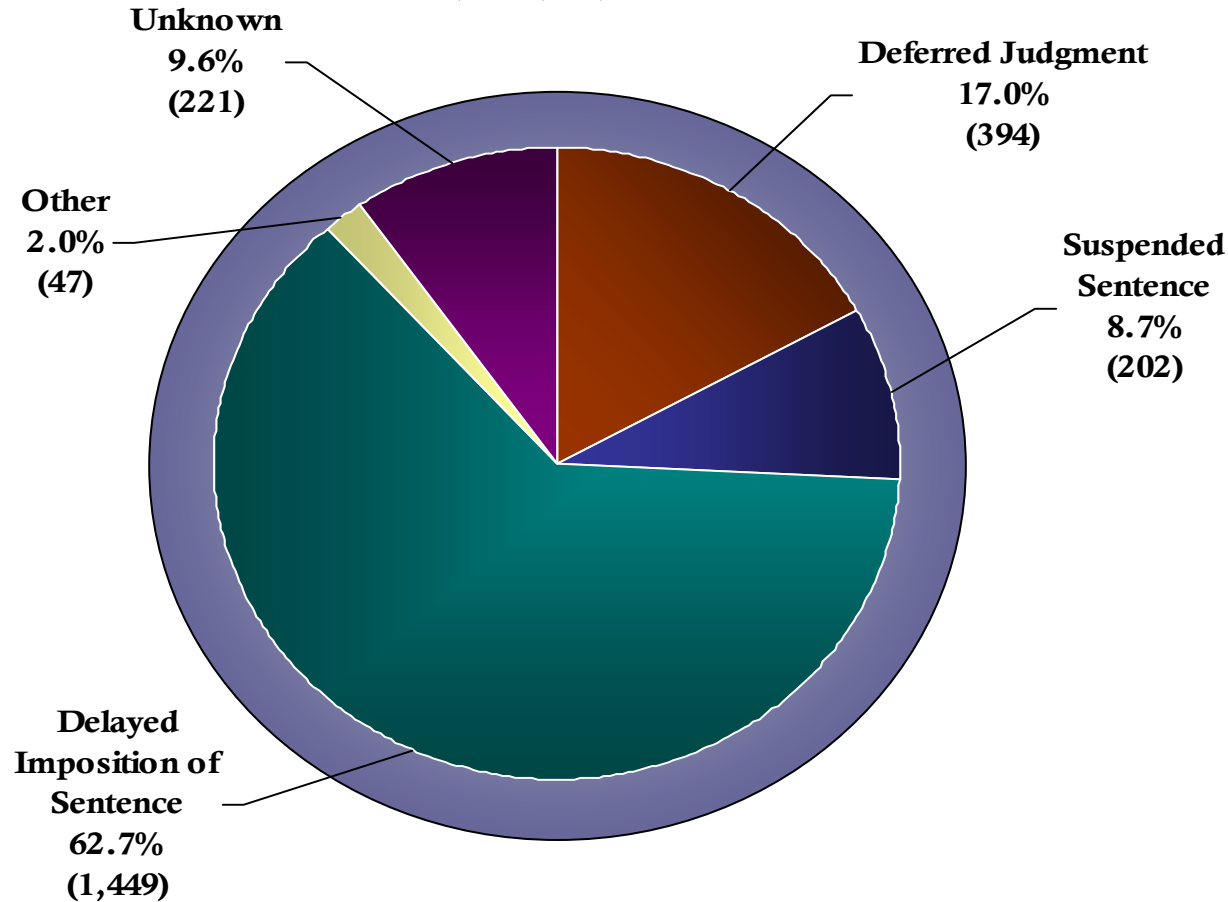

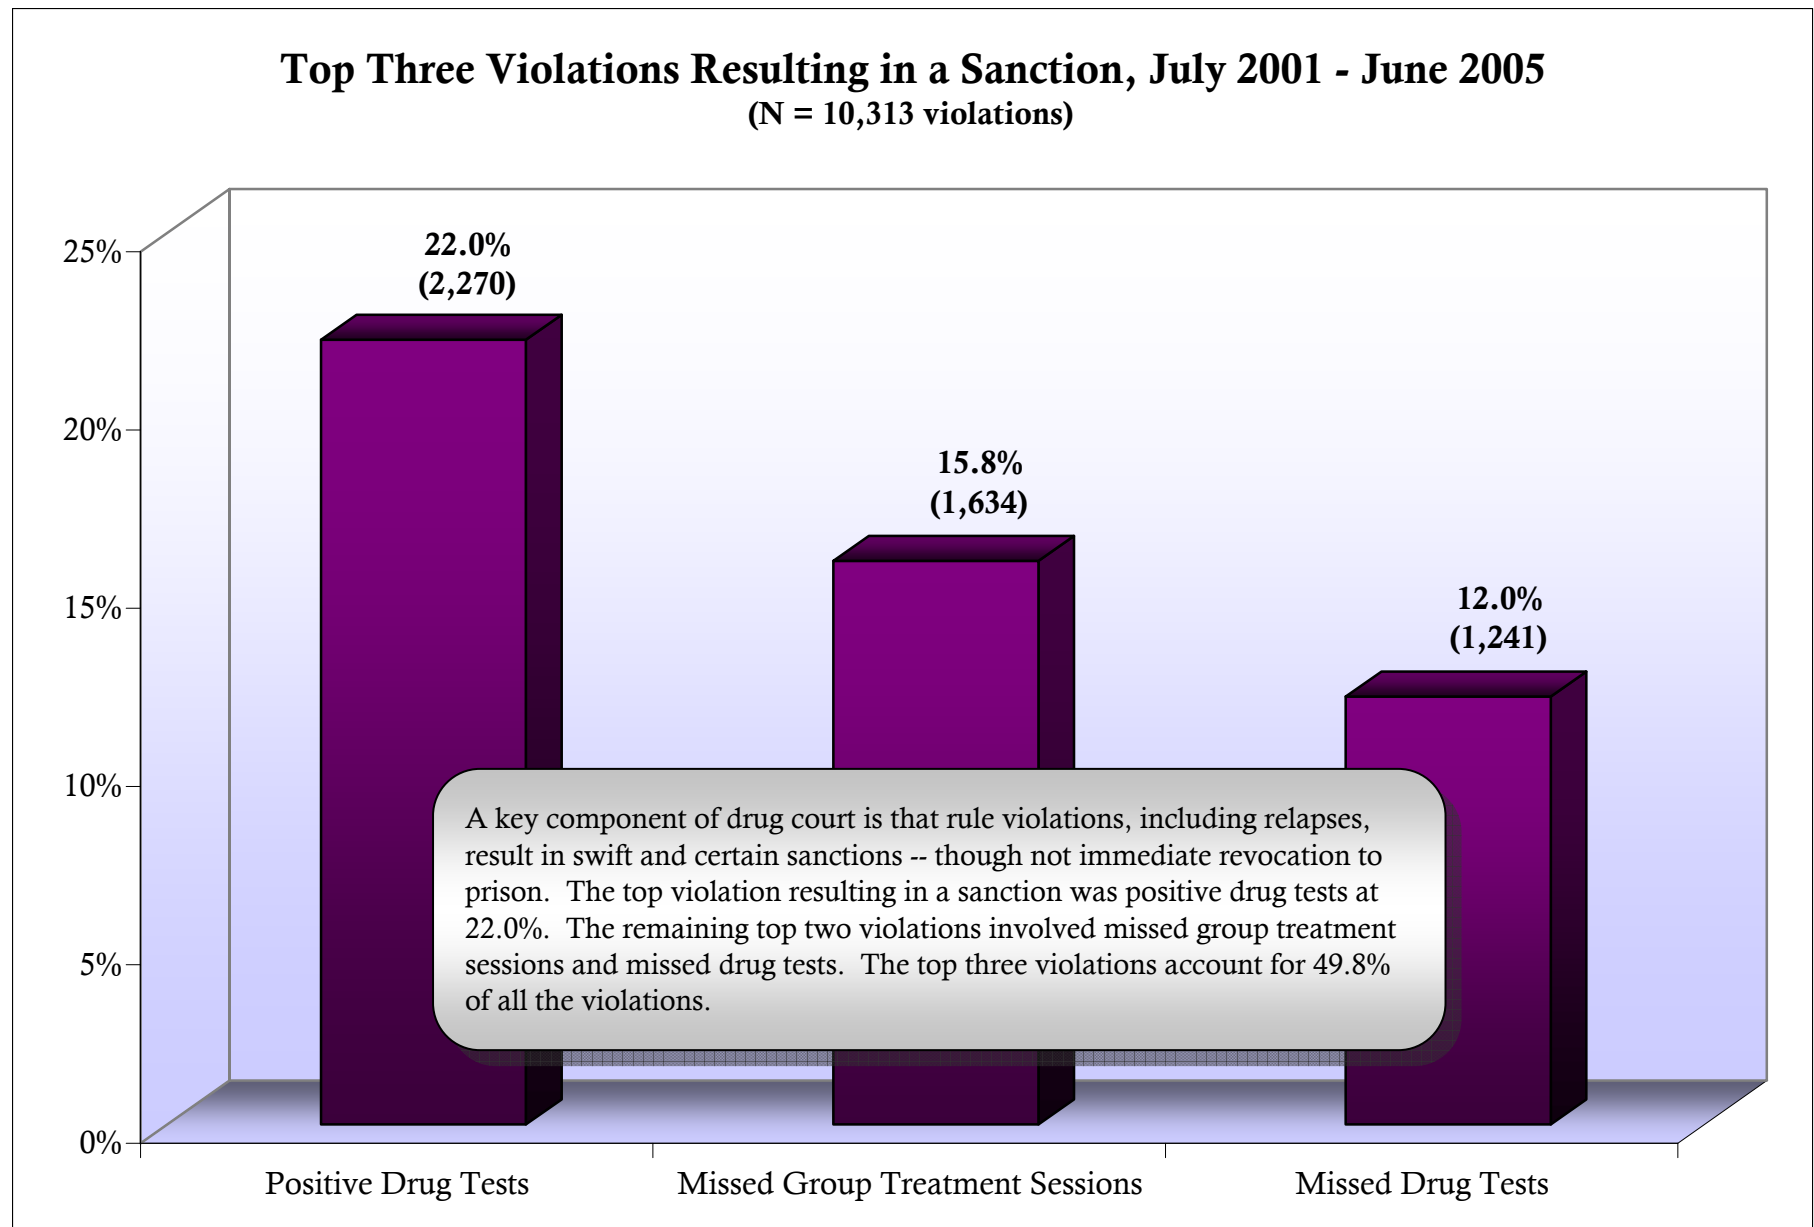

### Sentence Type for Drug Court Participants, July 2001 - June 2005

(N = 2,313)

Almost two-thirds of participants entering drug court received a delayed imposition of sentence. Nearly one-third of participants entered drug court on a disciplinary sanction of probation or parole and received a deferred judgment (17.0%) or a suspended sentence (8.7%).

### Top Three Sanctions Given, July 2001 - June 2005

(N = 6,533 Sanctions)

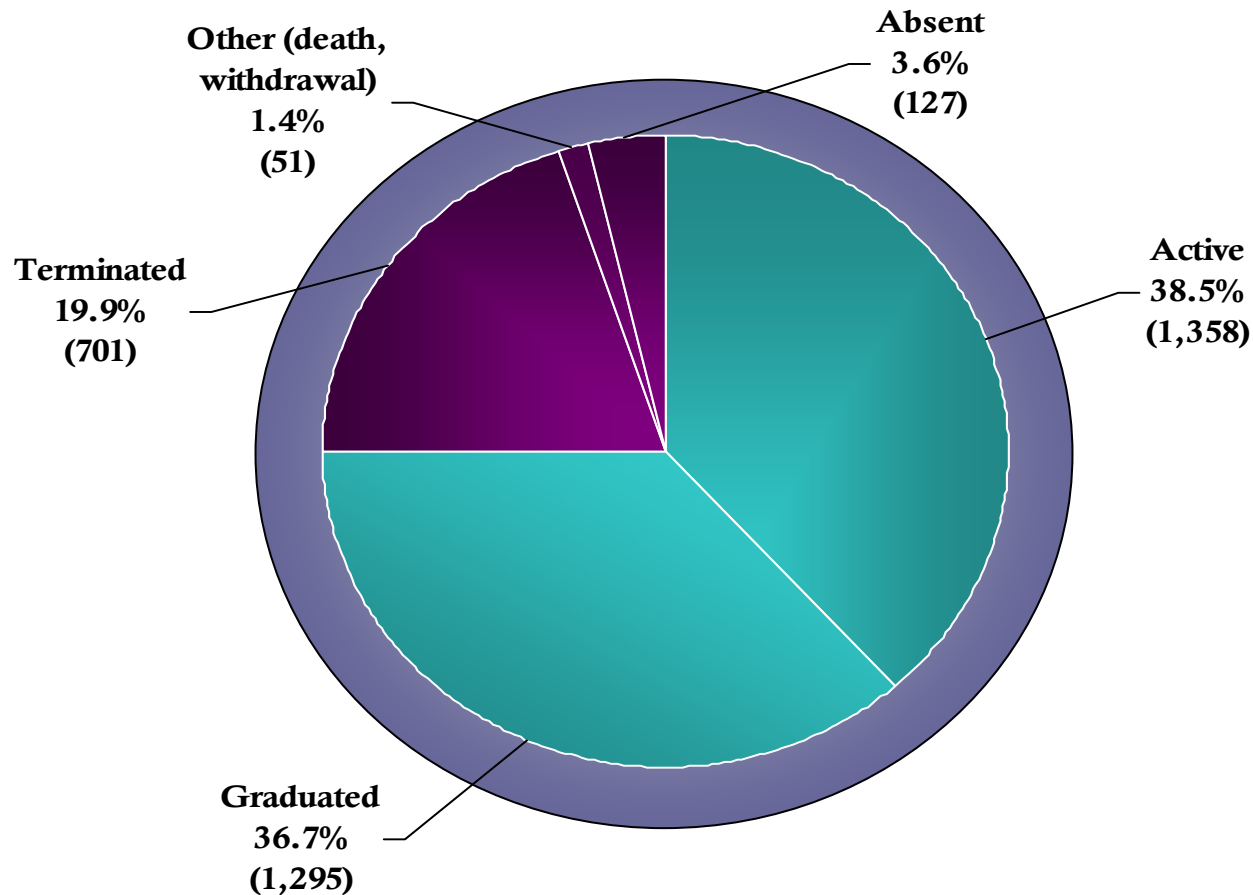

**Percent of Participants that Tested Positive  
for Alcohol or Other Drugs by Phase, July 2001 - June 2005**  
(N = 3,526)

### Status of Drug Court Participants, July 2001 - June 2005 (N = 3,532)

The retention rate (active and graduated participants) for drug courts is 75.2%, while the national retention rate for drug courts is 67 - 71% according to the National Drug Court Institute.

## Status of Drug Court Participants by Gender, July 2001 - June 2005

(N = 3,522)

Males have a 5.3% higher retention rate than females.

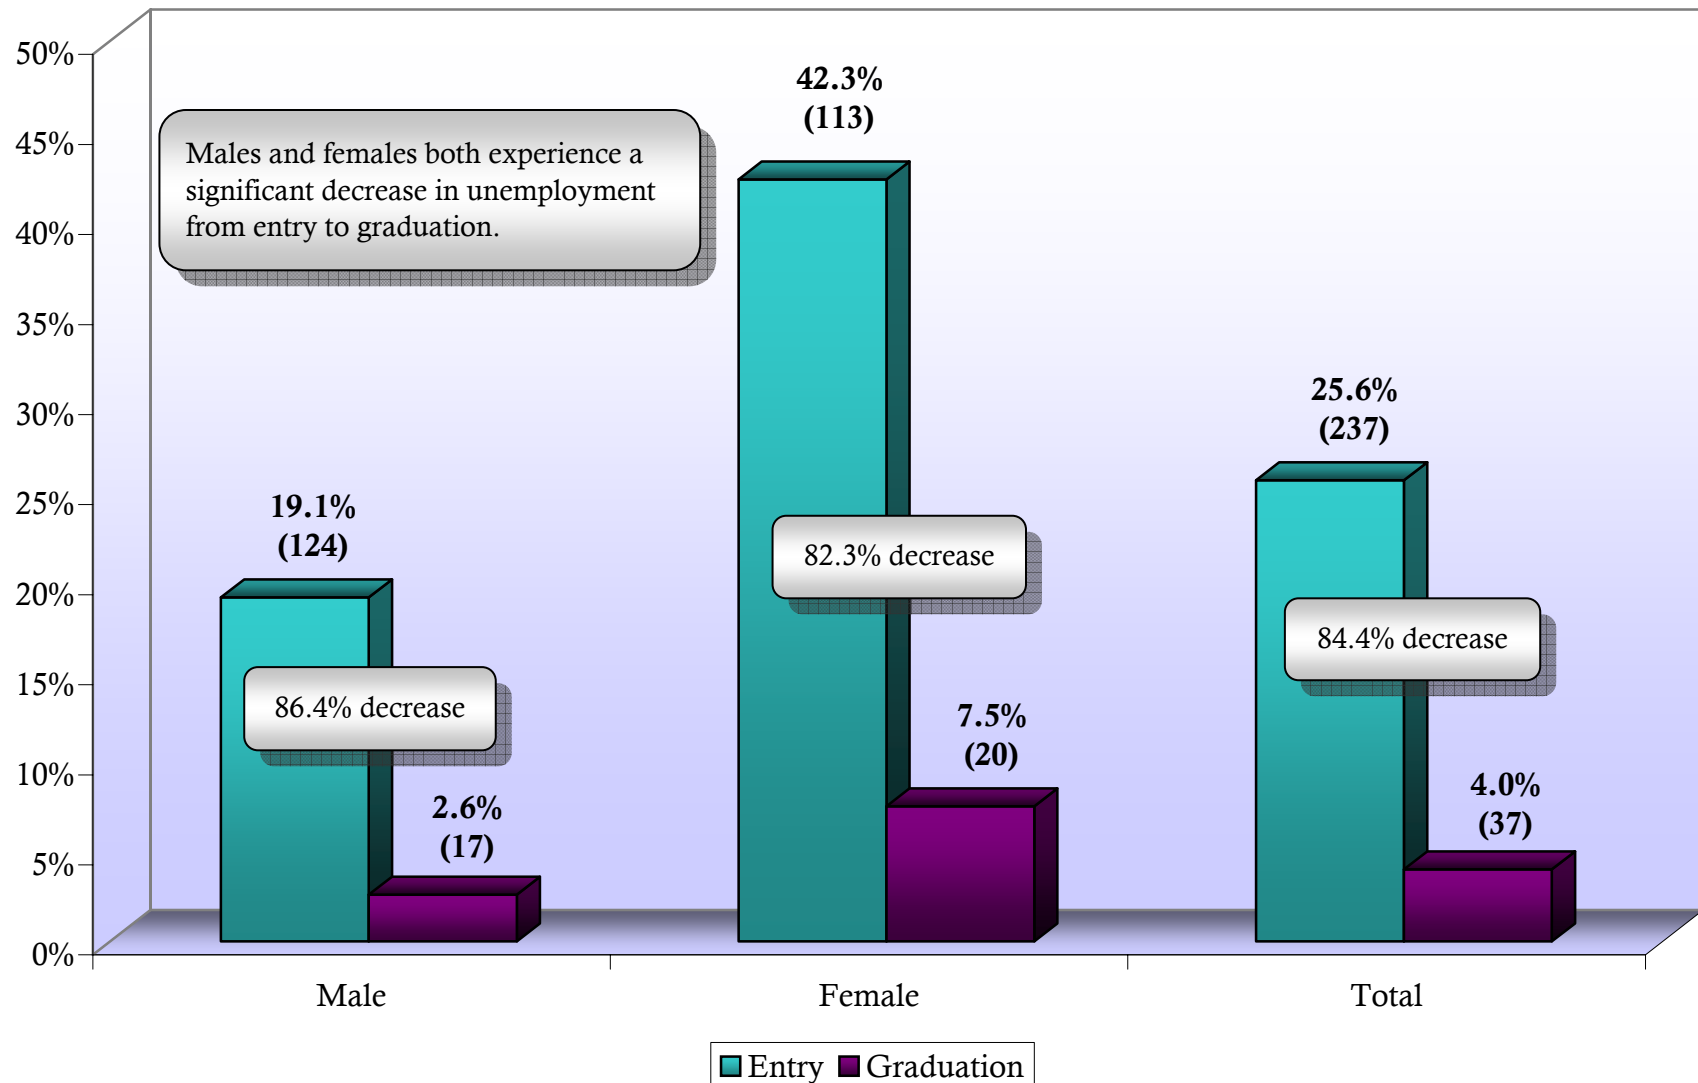

### Males

### Females

## Unemployment Status of Drug Court Graduates at Entry and Graduation (N = 918)

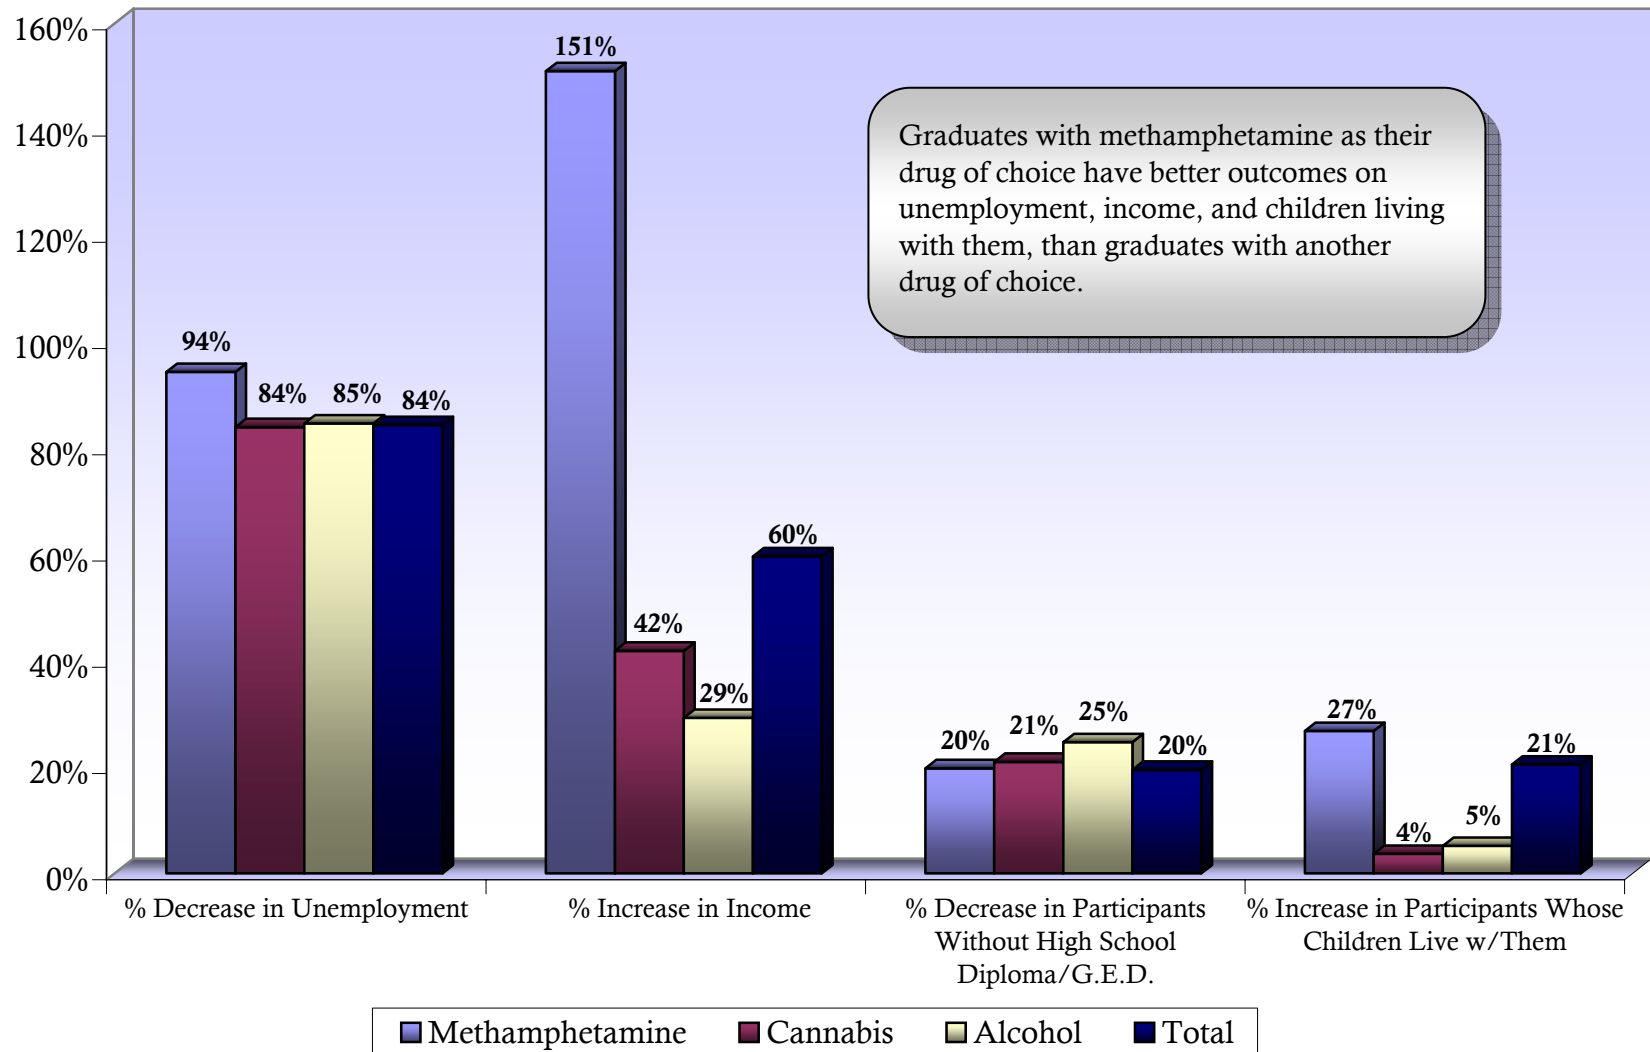

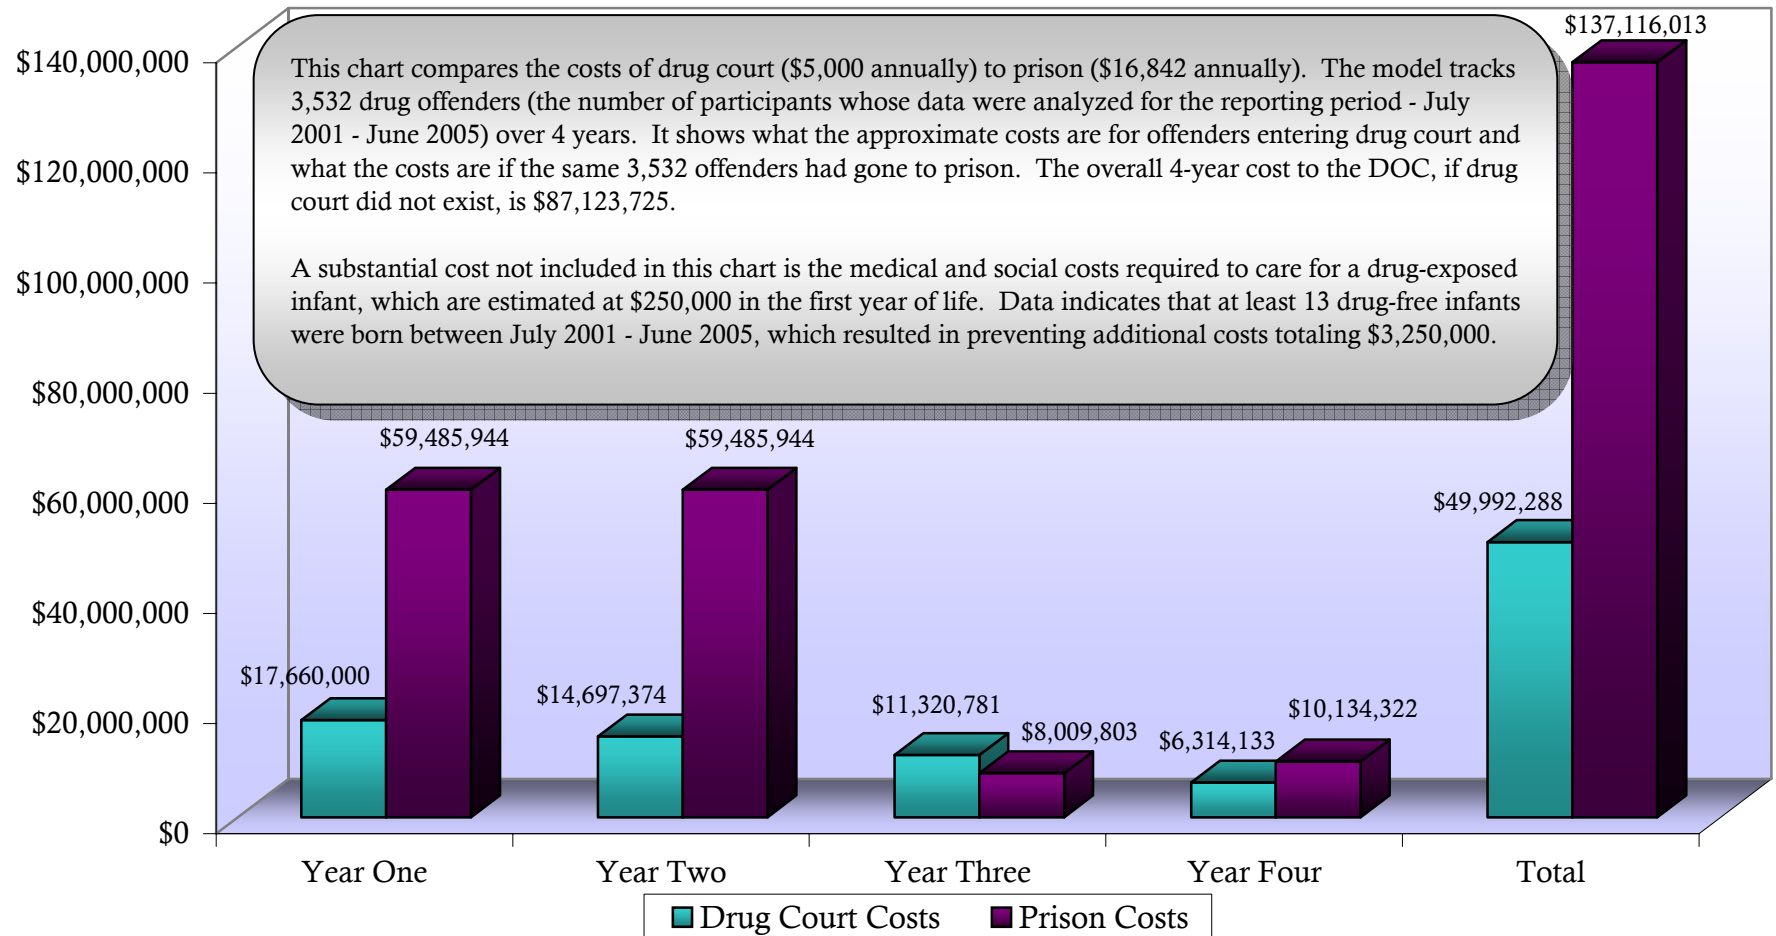

### Selected Outcomes Among Drug Court Graduates by Drug of Choice (Percent Change Between Entry and Graduation)

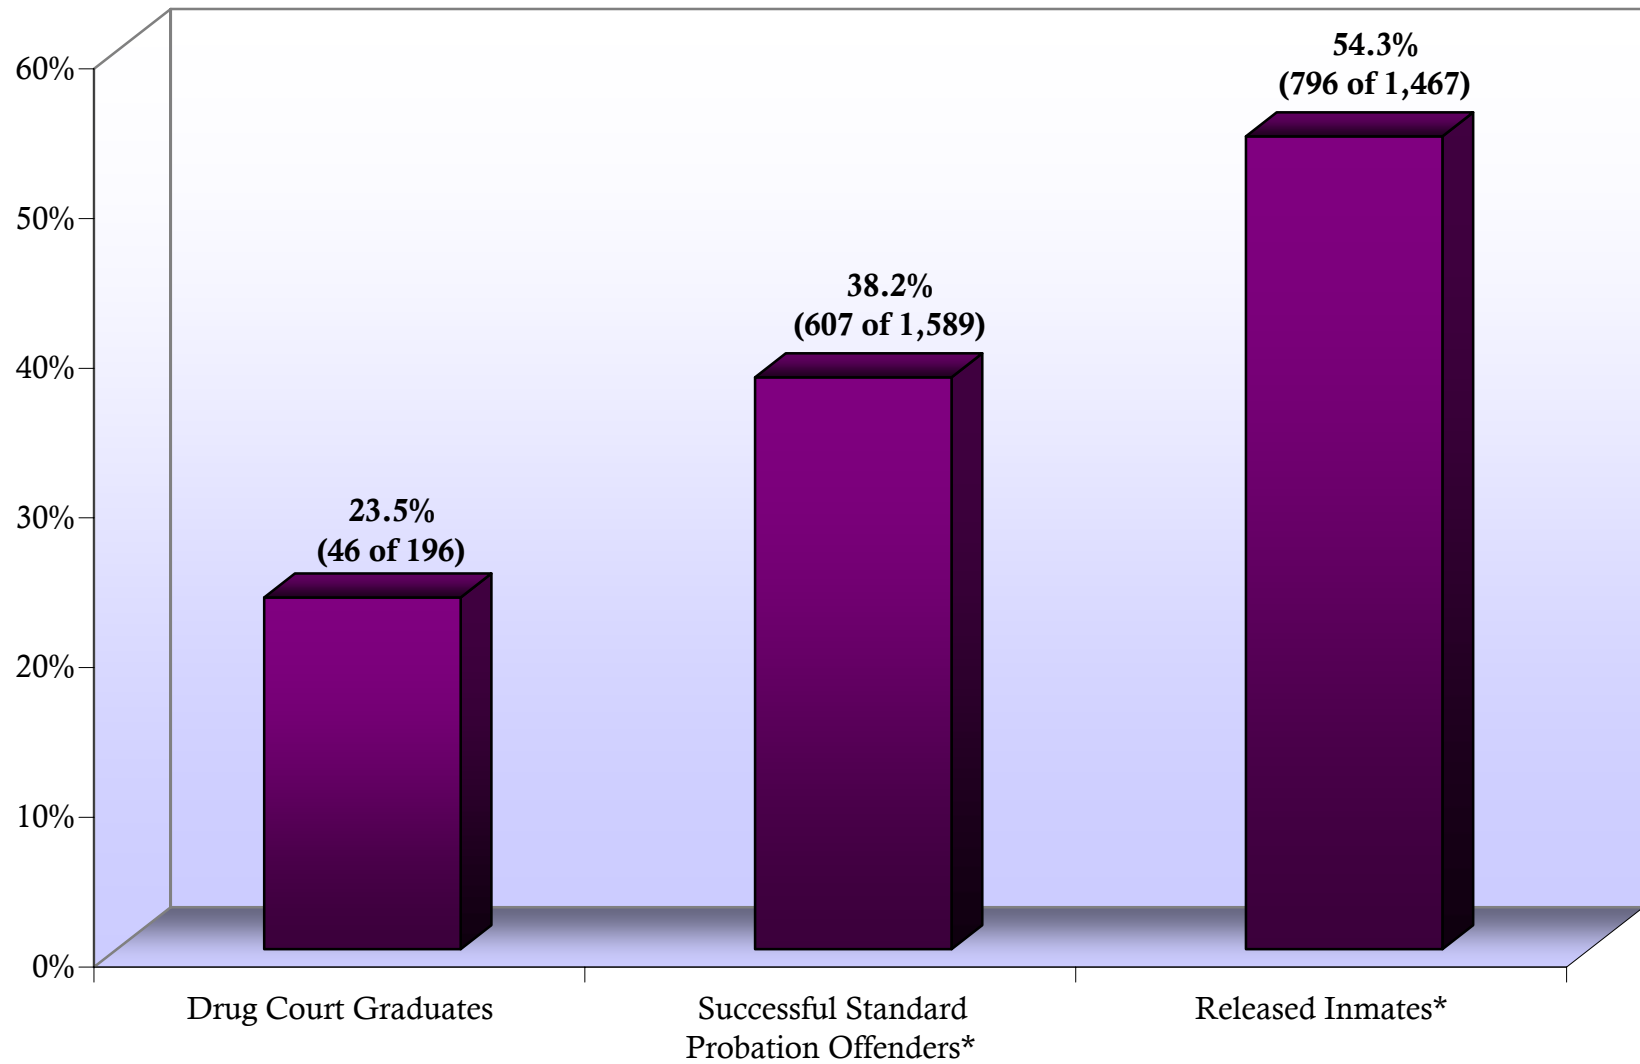

### Estimated Costs of 3,532 Offenders Entering Drug Court Instead of Prison Over 4 Years\*

\* Factors considered: costs to DOC, costs to ODMHSAS, drug court retention rates, recidivism rates of drug court graduates and released inmates, average sentence lengths and percent of time served, average length of stay in drug court, percent of offenders receiving prison sentences followed by probation, and revocation rates of probation offenders. Factors not included: costs to local government, quality of life benefits for early intervention into addiction, taxable revenue from newly-employed or re-employed drug court participants, costs associated with medical expenses generally covered by health care insurance, costs to the offender, costs associated with foster care for children of drug court participants or inmates and cost savings associated with drug-free infants.

### Re-Arrest Rates by Release Types, CY2001 - CY2005

\* The probation offenders and released inmates were sentenced for drug and DUI offenses making them comparable to the drug court graduates.
