

## State Data Platform - Data Sharing Standard

### Introduction

This standard specifies a data sharing solution for the state data platform that allows one platform for sharing all data residing in the state data platform. This standard allows sharing data across agencies and user groups in the State of Oklahoma. This document and information contained is applicable to all State of Oklahoma agencies and partners.

### Purpose

The purpose of this document is to describe the state standard for data sharing and data residing in data lakes, data warehouses and other storage mediums in the state data platform. The goal of this standard is to ensure there is an adoption of a standard mechanism for sharing data stored in the state data platform within a uniform sustainable system.

### Definitions

### Standard

OMES selected the DASH application on the state data platform as the standard for data sharing. The DASH application is an enterprise data platform solution providing a data management and data sharing environment solving data sharing needs within the enterprise. This product provides a sustainable model for data management, specifically for data sharing within state government. The platform provides an enterprise data platform solution to house, manage and allow enterprise data sharing with all State of Oklahoma agencies and partners. The platform protects sensitive data in accordance with applicable federal, state and regulatory standards.

### Compliance

This standard shall take effect upon publication and is made pursuant to Title 62 O.S. §§ 34.11.1 and 34.12 and Title 62 O.S. § 35.8. OMES IS may amend and publish the amended standards policies and standards at any time. Compliance is expected with all published policies and standards, and any published amendments thereof. Employees found in violation of this standard may be subject to disciplinary action, up to and including termination.

### Rationale

To coordinate and require central approval of state agency information technology purchases and projects to enable the chief information officer to assess the needs and capabilities of state agencies as well as streamline and consolidate systems to ensure that the state delivers essential public services to its citizens in the most efficient manner at the lowest possible cost to taxpayers.
