# SCIENCE

## Table of Contents

Introduction	3	Grade 8	100
PreKindergarten	10	Physical Science	119
Kindergarten	11	Chemistry I	134
Grade 1	19	Physics I	147
Grade 2	27	Biology I	163
Grade 3	33	Environmental Science	185
Grade 4	44	Earth and Space Science	202
Grade 5	56	Aeronautics	218
Grade 6	66	Engineering (Grade Bands)	232
Grade 7	81		

### Introduction

The Oklahoma Academic Standards for Science (OAS-S) are three-dimensional performance expectations representing the skills and knowledge students should understand and be able to do to be proficient in science and engineering. Every standard includes a science and engineering practice (everyday skills of scientists and engineers), disciplinary core ideas (science and engineering ideas used by scientists and engineers), and a crosscutting concept (ways of thinking like scientists and engineers). Pre-Kindergarten standards emphasize one dimension, the science and engineering practices, to provide early learners with ample time for exploratory play and background experiences that will inform K-12 learning experiences.

The 2026 OAS-S also includes Connections to Scientific Literacy. These connections are integrated throughout the standards, providing additional support for engaging students in understanding and applying basic scientific concepts, processes, and reasoning to everyday situations.

### Science Standards Overview

The Performance Expectation of each standard summarizes the three dimensions and highlights what students should understand and be able to do once that standard is mastered.

- Dimension 1: Science and Engineering Practices
- Dimension 2: Disciplinary Core Ideas
- Dimension 3: Crosscutting Concepts

The following additional components serve as support for educators in providing clarity and further guidance for each Performance Expectation.

**Clarification Statement:** A Clarification Statement is a short explanation that provides additional context or examples to a Performance Expectation, helping educators understand exactly what is expected of students when demonstrating a specific set of science ideas.

**Assessment Boundary:** An Assessment Boundary provides educators additional support in understanding the intent of the Performance Expectation and its relation to other standards in the learning progression. Educators should use the Assessment Boundaries as tools for developing assessments. For Grade 5, Biology I, and Physical Science, the Assessment Boundaries are used to inform the development of the state summative assessments.

## Dimension 1: Science and Engineering Practices

The Science and Engineering Practices (SEPs) describe two things, 1) the actions and processes scientists use as they investigate, experiment, build models, and develop theories about the world, and 2) the actions and processes engineers use as they design and build systems. Each science standard integrates one SEP, and **all standards that emphasize engineering skills or ideas are designated with an asterisk\***. The eight science and engineering practices are:

### Asking Questions and Defining Problems

A practice of science is to ask and refine questions that lead to descriptions and explanations of how the natural and designed worlds work. Engineering questions clarify problems to determine criteria for successful solutions.

### Developing and Using Models

A practice of both science and engineering is to use and construct models as helpful tools for representing ideas and explanations. Models can include diagrams, drawings, physical replicas, mathematical representations, analogies, and computer simulations.

### Planning and Carrying Out Investigations

Scientists and engineers plan and carry out investigations in the field or laboratory, as individuals and collaborators on a team. Investigations are systematic and require clarifying what counts as data and identifying variables or parameters.

### Analyzing and Interpreting Data

Investigations produce data that must be analyzed to derive meaning or effectiveness of a design.

### Using Mathematics and Computational Thinking

Mathematics and computation are fundamental tools for representing physical variables and their relationships. They are used for constructing simulations, solving equations, and recognizing, expressing, and applying quantitative relationships.

### Constructing Explanations and Designing Solutions

End products of science are explanations, and end products of engineering are solutions. The construction of theories provides explanatory accounts of the world, and scientific knowledge is utilized in the development of solutions to problems.

### Engaging in Scientific Argument from Evidence

Argumentation is the process by which evidence-based conclusions and solutions are reached. Reasoning and arguments informed by evidence are essential to identifying the best explanation for a natural phenomenon or the best solution to a design problem.

### Obtaining, Evaluating, and Communicating Information

Scientists and engineers clearly and persuasively communicate the ideas and methods they generate, both individually and in groups.

## Dimension 2: Disciplinary Core Ideas

Disciplinary Core Ideas (DCIs) represent a set of science and engineering ideas for K-12 science education that have broad importance across multiple sciences and engineering disciplines; provide a key tool for understanding or investigating more complex ideas and solving problems; relate to the interests and life experiences of students; and are teachable and learnable over multiple grades at increasing levels of sophistication (NRC, 2012, p. 21). Disciplinary Core Ideas are grouped into four domains:

### Physical Sciences (PS)

Most systems or processes depend on physical and chemical subprocesses, whether the system is Earth's atmosphere, a star, river, bicycle, or living cell. To understand the physical and chemical basis of a system, students must understand the structure of matter, the forces between objects, the related energy transfers, and their consequences. In this way, the underlying principles of physical science, chemistry, and physics allow students to understand all natural and designed phenomena.

### Life Sciences (LS)

Life sciences focus on patterns, processes, and relationships of living organisms. The study of life ranges over scales from single molecules, organisms, and ecosystems, to the entire biosphere. A core principle is that organisms are related through common ancestry and that processes of natural selection have led to the tremendous diversity of the biosphere. Through courses like Biology I and Environmental Science, students explore all aspects of living things and the environments they live in.

### Earth and Space Sciences (ESS)

Through Earth and Space Sciences, students investigate processes that operate on Earth (e.g., connections between the atmosphere, geosphere, and biosphere) as well as address Earth's place in the solar system and universe. ESS involves phenomena that range in scale (from microscopic to cosmic) and timeframes (from short-term weather events to long-term geological processes).

### Engineering, Technology, and Applications of Science (ETS)

The application of science knowledge and skills to engineering have contributed to the development of many technologies. Insights gained from scientific discoveries have altered how buildings, bridges, and cities are constructed; changed the operations of factories; led to new methods of generating and distributing energy; and created new modes of travel and communication. An overarching goal of ETS is for students to explore links among engineering, technology, science, and society throughout their science learning.

### Dimension 3: Crosscutting Concepts

The Crosscutting Concepts (CCCs) represent common threads or themes that span across the science domains (physical, life, and Earth and space), and have value to both scientists and engineers because they identify universal properties and processes found in all disciplines. The seven crosscutting concepts are:

#### **Patterns**

Observed patterns in nature guide organization and classification, and prompt questions about the cause and effect relationships underlying them. Patterns are also useful as evidence to support explanations and arguments.

#### **Cause and Effect**

Events have causes, sometimes simple, sometimes complex. Deciphering causal relationships, and the mechanisms by which they are mediated, is a major activity of scientists and engineers. Mechanisms can then be tested across given contexts and used to predict and explain events in new situations.

#### **Scale, Proportion, and Quantity**

When investigating phenomena, it is critical to recognize what is relevant at different measures of size, time, and energy, and to recognize how changes in scale, proportion, and quantity affect a system's structure or performance.

#### **System and System Models**

Defining the system under study—specifying its boundaries and making explicit a model of that system—provides a tool for understanding and testing ideas.

#### **Energy and Matter**

Tracking changes of energy and matter into, out of, and within systems helps scientists and engineers understand a system's possibilities and limitations.

#### **Structure and Function**

An object's structure and shape determine many of its properties and functions. For example, the structures, shapes, and substructures of living organisms determine how the organism functions to meet its needs within an environment.

#### **Stability and Change**

For natural and designed systems, conditions of stability and rates of change provide the focus for understanding how a system operates and the causes of the changes in that system.

## Connections to Scientific Literacy

The Oklahoma Academic Standards for Science (OAS-S) integrate connections to scientific literacy, providing additional support for engaging students in understanding and applying basic scientific concepts, processes, and reasoning to everyday situations. There are four scientific literacy categories closely related to the science and engineering practices, and four closely related to the crosscutting concepts.

### Scientific Literacy Connections that Support the Science and Engineering Practices

#### Scientific Investigations Use a Variety of Methods

Although no single step-by-step scientific method captures the complexity of doing science, scientific investigations follow a systematic approach grounded in reasoning, objectivity, and evidence-based inquiry. Scientific methodology incorporates deductive, inductive, and abductive reasoning, guided by rational argument, peer review, and reproducibility.

#### Scientific Knowledge is Based on Empirical Evidence

Scientific knowledge is a combination of observations and scientific reasoning. Logical connections between evidence and explanations, along with shared rules for evaluating evidence and reproducing results, ensure consistency across disciplines and over time.

#### Scientific Knowledge is Open to Revision in Light of New Evidence

Scientific knowledge is simultaneously reliable and subject to change in light of new evidence or reinterpretation of existing evidence. This adaptability ensures that science continuously improves and refines its understanding of the natural world.

#### Scientific Laws, Theories, and Models Explain Natural Phenomena.

A primary goal of science is the formation of laws and theories about the natural world. Laws describe regularities or relationships in nature, while theories are substantiated explanations of the why and how something occurs based on a body of evidence, observation, and repeated testing. Models support this understanding by being simplified representations of the natural phenomenon being observed and tested.

## Scientific Literacy Connections that Support the Crosscutting Concepts

### **Science is a Way of Knowing**

Science is a cumulative and collaborative effort, contributed to by people across generations and cultures to understand how something occurs in the natural world without personal bias. Distinguished by empirical standards, logical reasoning, and skeptical review, science serves as a unique way of knowing.

### **Science is a Human Endeavor**

Science is a collaborative human effort shaped by individuals from various backgrounds, cultures, and experiences with creativity and imagination playing key roles. Scientists and engineers, working in teams, rely on qualities like persistence, logic, and intellectual honesty, and are influenced by advances in technology. As with all humans, scientists and engineers are fallible. That is why sound understanding of scientific methods, transparency, and reproducibility are important to advancement and understanding of science.

### **Science Addresses Questions About the Natural and Designed Worlds**

Science focuses on studying the natural world and can only answer questions that are supported by empirical evidence, limited by human capacity, technology, and available materials.

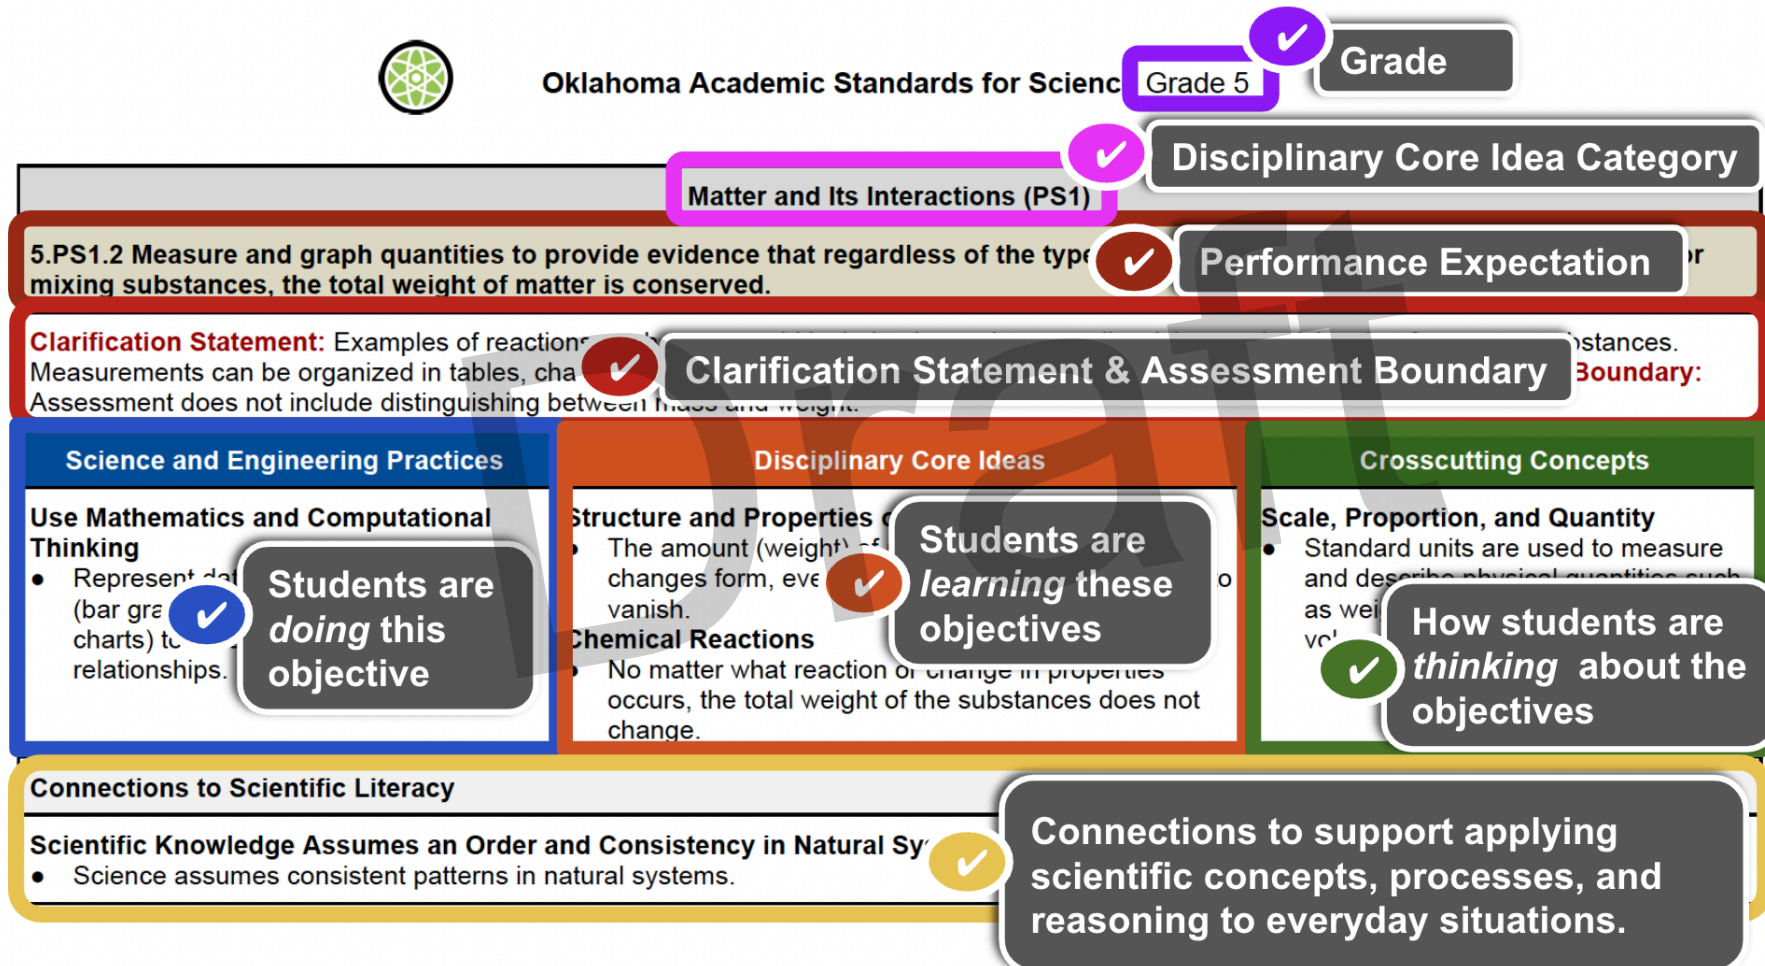

### **Scientific Knowledge Assumes an Order and Consistency in Natural Systems**

Scientific knowledge assumes natural events follow consistent, repeatable patterns governed by universal laws. This consistency, observed through measurement, allows science to systematically investigate and explain the universe.

## Navigating the Standards

PREKINDERGARTEN (PK)	
Science Exploration (S)	
<b>PK.S.1 Engage in play to explore patterns in the natural and designed worlds.</b>	<b>Clarification Statement:</b> Exploration-based play should include playing inside the classroom (e.g., building towers with blocks, interacting with a balloon, mixing watercolors, placing different objects in water) and outside the classroom (e.g., swinging at different speeds, kicking a ball in different ways, rolling round objects down a hill, digging in the dirt). Emphasis is on basic play as a means of gathering information, such as noticing objects fall/roll down and some objects float/sink.
<b>PK.S.2 Make observations to describe objects in the natural and designed worlds.</b>	<b>Clarification Statement:</b> Property observations should focus on what things look, feel, hear, or smell like and the similarities and differences of the environment inside the classroom (e.g., desks, tables, lights, flooring, students, classrooms, plants, animals) and outside the classroom (e.g., soil, plants, animals, insects, students, sunlight, clouds). Explanations for why things inside and outside the classroom look, feel, or smell the way they do are not expected.
<b>PK.S.3 Notice and describe similarities and differences among plants, animals, and objects.</b>	<b>Clarification Statement:</b> Similarities and differences might include grouping like plants, animals, or objects based on observations. Descriptions of groupings might be based on how plants, animals, or objects look, feel, or smell.
<b>PK.S.4 Share noticings and wonderings of the natural and designed worlds.</b>	<b>Clarification Statement:</b> Observations could be shared through drawings, writings, building models, or other creative expressions, such as drama or creative movement. Sharing could also be done through retelling, verbal descriptions, or talking with others. Wonderings might include “why,” “how,” and “what if” statements. Respect for the sharing and wondering of others should be emphasized, but explanations for their observations are not expected.
<b>PK.S.5 Ask questions based on curiosity about the natural and designed worlds.</b>	<b>Clarification Statement:</b> Questions may arise through observations, play, interests, events in the classroom, text, media, or other experiences of the natural and designed worlds.
<b>PK.S.6 Engage in investigations based on curiosity and wondering about the natural and designed worlds.</b>	<b>Clarification Statement:</b> Opportunities for investigation or further investigation could arise from opportunities to engage in play inside and outside the classroom, curiosities and wonderings of the student from school or out of school experiences. Emphasis is on providing opportunities for investigations to arise from student curiosities, wonderings, or questions.

KINDERGARTEN (K)		
Motion and Stability of Forces (PS2)		
<b>K.PS2.1 Plan and conduct an investigation to compare the effects of different strengths or different directions of pushes and pulls on the motion of an object.</b>		
<p><b>Clarification Statement:</b> Example investigations include observing the movement of different objects being pulled by a string, observing different objects pushed on a surface and up and down a ramp, or observing how two objects (e.g., toy cars, balls) interact when they collide. Observations should be collected directly through exploratory play with opportunities to work with peers to share ideas for investigations and observations.</p> <p><b>Assessment Boundary:</b> Assessment is limited to different relative strengths or different directions, but not both at the same time. Assessment does not include non-contact pushes or pulls such as those produced by magnets.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"> <li>With guidance, plan and conduct an investigation in collaboration with peers.</li> </ul>	<b>Forces and Motion</b> <ul style="list-style-type: none"> <li>Pushes and pulls can have different strengths and directions</li> <li>Pushing or pulling on an object can change the speed or direction of its motion and can start or stop it</li> </ul> <b>Types of Interactions</b> <ul style="list-style-type: none"> <li>A bigger push or pull makes things speed up or slow down more quickly.</li> </ul> <b>Relationship Between Energy and Forces</b> <ul style="list-style-type: none"> <li>When objects touch or collide, they push on one another and can change motion.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Simple tests can be designed to gather evidence to support or refute student ideas about causes.</li> </ul>
Connections to Scientific Literacy		
<b>Scientific Investigations Use a Variety of Methods</b> <ul style="list-style-type: none"> <li>Scientists use different ways to study the world.</li> </ul>		

Motion and Stability of Forces (PS2)

**K.PS2.2 Analyze data to determine if a design solution works as intended to change the speed or direction of an object with a push or pull.\***

**Clarification Statement:** Data should be limited to recorded observations collected through exploration-based play of a problem. Example problems could include having an object (e.g., toy car or ball) move a certain distance, follow a particular path, or knock down other objects. Designed solutions could include using or building a ramp to increase the speed of an object, or using objects that would cause another object like a toy car or ball to follow a particular path. Emphasis is on basic play as a means to develop a designed solution and test that design. **Assessment Boundary:** Assessment does not include friction as a mechanism for change in speed.

## Oklahoma Academic Standards for Science Kindergarten

Energy (PS3)		
<b>K.PS3.1 Make observations to determine the effect of sunlight on Earth's surface.</b>		
<b>Clarification Statement:</b> Making observations should include opportunities to directly observe surfaces (e.g., sand, soil, rocks, or playground equipment) in direct sunlight, partial sunlight, and shade with opportunities to explore and discuss observed patterns of the Sun's impact on those surfaces. Opportunities to share noticings and wonderings should be encouraged. <b>Assessment Boundary:</b> Assessment of temperature is limited to relative measures such as warmer/cooler.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Make observations (firsthand or from media) to collect data that can be used to make comparisons.</li></ul>	<b>Conservation of Energy and Energy Transfer</b> <ul style="list-style-type: none"><li>Sunlight warms the Earth's surface.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Events have causes that generate observable patterns.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Investigations Use a Variety of Methods</b> <ul style="list-style-type: none"><li>Scientists use different ways to study the world.</li></ul>		

## Oklahoma Academic Standards for Science Kindergarten

Energy (PS3)		
<b>K.PS3.2 Use tools and materials to design and build a structure that will reduce the warming effect of sunlight on an area.*</b>		
<b>Clarification Statement:</b> Examples of structures could include forms of umbrellas, canopies, and tents developed through exploratory play with a variety of materials allowing for opportunities to build and test how designed structures might minimize the warming effect of the Sun. Effectiveness can be determined by placing rocks or sand under the structure and observing the warmth or coolness of the object. <b>Assessment Boundary:</b> Assessment of temperature is limited to relative measures such as warmer/cooler.

\*This standard emphasizes engineering skills or ideas.

## Oklahoma Academic Standards for Science Kindergarten

From Molecules to Organisms: Structure and Function (LS1)		
<b>K.LS1.1 Use observations to describe patterns of what plants and animals (including humans) need to survive.</b>		
<p><b>Clarification Statement:</b> Examples of observable patterns could include that animals need to take in food but plants do not; the different kinds of food needed by different types of animals; the requirement of plants to have light; and that all living things need water. Observations could be collected through nature walks around the playground and videos. Patterns of similarities and differences among different animals or between plants and animals should be discussed. <b>Assessment Boundary:</b> Assessment is limited to observation and not how plants use light (photosynthesis).</p>

<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"><li>Scientists look for patterns and order when making observations about the world.</li></ul>		

## Oklahoma Academic Standards for Science Kindergarten

Earth Systems (ESS2)		
<b>K.ESS2.1 Use and share observations of local weather conditions to describe patterns over time.</b>		
<p><b>Clarification Statement:</b> Examples of qualitative observations could include descriptions of weather (such as sunny, cloudy, rainy, and warm); examples of quantitative observations could include numbers of sunny, windy, and rainy days in a month. Examples of patterns could include that it is usually cooler in the morning than in the afternoon and the number of sunny days versus cloudy days in different months. <b>Assessment Boundary:</b> Assessment of temperature is limited to whole numbers for patterns and relative measures such as warmer/cooler.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"><li>Use observations (firsthand or from media) to describe patterns in the natural world in order to answer scientific questions.</li></ul>	<b>Weather and Climate</b> <ul style="list-style-type: none"><li>Weather is the combination of sunlight, wind, snow, or rain, and temperature in a particular region at a particular time.</li><li>People measure these conditions to describe and record the weather and to notice patterns over time.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Patterns in the natural world can be observed, used to describe phenomena, and used as evidence.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"><li>Scientists look for patterns and order when making observations about the world.</li></ul>		

## Oklahoma Academic Standards for Science Kindergarten

Earth Systems (ESS2)		
<b>K.ESS2.2 Construct an argument supported by evidence for how plants and animals (including humans) can change the environment to meet their needs.</b>		
<b>Clarification Statement:</b> Arguments center on sharing examples of how plants and animals change their environments and discussing ideas as to why those changes meet a need of plants and animals (e.g., shelter, food, room to grow). Examples of arguments could include squirrels digging in the ground to hide food, tree roots breaking sidewalks, or birds building a nest to protect their young. <b>Assessment Boundary:</b> Arguments should be based on qualitative not quantitative evidence.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"><li>Construct an argument with evidence to support a claim.</li></ul>	<b>Biogeology</b> <ul style="list-style-type: none"><li>Plants and animals can change their environment.</li></ul> <b>Human Impacts on Earth Systems</b> <ul style="list-style-type: none"><li>Things that people do to live comfortably can affect the world around them.</li></ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"><li>Systems in the natural and designed worlds have parts that work together.</li></ul>

Earth and Human Activity (ESS3)		
<b>K.ESS3.1 Use a model to represent the relationship between the needs of different plants or animals (including humans) and the places they live.</b>		
<b>Clarification Statement:</b> Plants, animals, and their surroundings make up a system. Models of these systems could include drawings, physical replicas, or dramatizations that show relationships between the needs of plants and animals, and their surroundings. Examples of relationships could include squirrels needing to eat nuts and seeds, therefore, they usually live near trees; or grasses need sunlight, so they often grow in meadows with little to no trees. Opportunities for students to share noticings and wonderings should be encouraged. <b>Assessment Boundary:</b> Assessment is limited to single relationships between plant needs or animal needs and their surroundings.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Use a model to represent relationships in the natural world.</li></ul>	<b>Natural Resources</b> <ul style="list-style-type: none"><li>Living things need water, air, and resources from the land, and they live in places that have the things they need.</li><li>Humans use natural resources for everything they do.</li></ul>	<b>System and System Models</b> <ul style="list-style-type: none"><li>Systems in the natural and designed worlds have parts that work together.</li></ul>

## Oklahoma Academic Standards for Science Kindergarten

### Earth and Human Activity (ESS3)

**K.ESS3.2** Ask questions to understand the purpose of weather forecasting to prepare for and respond to severe weather.\*

**Clarification Statement:** Questions may arise or be encouraged through observations, interests, text, or media. Emphasis is on forecasting of local weather and how weather forecasting can help people plan for, and respond to, specific types of local weather (e.g., staying indoors during severe weather, going to cool places during heat waves). **Assessment Boundary:** Assessment does not include causes for severe weather.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Asking Questions</b> <ul style="list-style-type: none"> <li>Asking questions, making observations, and gathering information are helpful in thinking about problems.</li> </ul>	<b>Natural Hazards</b> <ul style="list-style-type: none"> <li>Some kinds of severe weather are more likely than others in a given region.</li> <li>Weather scientists forecast severe weather so that the communities can prepare for and respond to these events.</li> </ul> <b>Defining and Delimiting an Engineering Problem</b> <ul style="list-style-type: none"> <li>Asking questions, making observations, and gathering information are helpful in thinking about problems.</li> </ul> <b>Interdependence of Science, Engineering, and Technology</b> <ul style="list-style-type: none"> <li>People depend on various technologies in their lives; human life would be very different without technology</li> </ul> <b>Influence of Engineering, Technology, and Science on Society and the Natural World</b> <ul style="list-style-type: none"> <li>People encounter questions about the natural world every day.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Events have causes that generate observable patterns.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

GRADE 1 (1)		
Waves and Their Applications in Technologies for Information Transfer (PS4)		
<b>1.PS4.1 Plan and conduct investigations to provide evidence that vibrating materials can make sound and that sound can make materials vibrate.</b>		
<b>Clarification Statement:</b> Examples of vibrating materials that make sound could include tuning forks, kazoos, plucking a stretched string or rubber band, and stringed instruments. Examples of sound making matter vibrate could include holding a piece of paper near a speaker making sound, placing a hand on personal larynx or mouth while humming, and holding an object near a vibrating tuning fork. <b>Assessment Boundary:</b> Assessment does not include how sound travels or wave characteristics, including but not limited to, wavelength and amplitude.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Plan and conduct investigations collaboratively to produce data to serve as the basis for evidence to answer a question.</li></ul>	<b>Wave Properties</b> <ul style="list-style-type: none"><li>Sound can make matter vibrate, and vibrating matter can make sound.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Simple tests can be designed to gather evidence to support or refute student ideas about causes.</li></ul>
Connections to Scientific Literacy		
<b>Scientific Investigations Use a Variety of Methods</b> <ul style="list-style-type: none"><li>Science investigations can begin with a question.</li><li>Scientists use different ways to study the world.</li></ul>		

Waves and Their Applications in Technologies for Information Transfer (PS4)		
<b>1.PS4.2 Make observations to construct an evidence-based account that objects can be seen only when illuminated.</b>		
<b>Clarification Statement:</b> Examples of observations could include those made in a completely dark room or those made in a dark room with the door slightly opened. Illumination could be from an external light source or an object giving off its own light. This can be explored with string lights, projectors, and flashlights. <b>Assessment Boundary:</b> Assessment should not include reflection of light.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Make observations (firsthand or from media) to construct an evidence-based account for natural phenomena.</li></ul>	<b>Electromagnetic Radiation</b> <ul style="list-style-type: none"><li>Objects can be seen if light is available to illuminate them or if they give off their own light.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Simple tests can be designed to gather evidence to support or refute student ideas about causes.</li></ul>

<b>1.PS4.3 Plan and conduct an investigation to determine the effect of placing objects made with different materials in the path of a beam of light.</b>		
<b>Clarification Statement:</b> Examples of materials could include those that are transparent (e.g., clear plastic), translucent (e.g., wax paper), opaque (e.g., cardboard), and reflective (e.g., mirror). <b>Assessment Boundary:</b> Assessment does not include the speed of light or assessment of descriptive words like transparent, translucent, opaque, or reflective.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Plan and conduct investigations collaboratively to produce data to serve as the basis for evidence to answer a question.</li></ul>	<b>Electromagnetic Radiation</b> <ul style="list-style-type: none"><li>Some materials allow light to pass through them, others allow only some light through, and others block all the light and create a dark shadow on any surface beyond them, where the light cannot reach.</li><li>Mirrors can be used to redirect a light beam.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Simple tests can be designed to gather evidence to support or refute student ideas about causes.</li></ul>

Waves and Their Applications in Technologies for Information Transfer (PS4)		
<b>1.PS4.4 Use tools and materials to design and build a device that uses light or sound to solve the problem of communicating over a distance.*</b>		
<b>Clarification Statement:</b> Examples of devices could include a light source to send signals (e.g., lighthouses), paper cup and string “telephones,” and a pattern of drum beats. <b>Assessment Boundary:</b> Assessment does not include technological details for how communication devices work.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Designing Solutions</b> <ul style="list-style-type: none"><li>• Uses tools and materials provided to design a device that solves a specific problem.</li></ul>	<b>Information Technologies and Instrumentation</b> <ul style="list-style-type: none"><li>• People also use a variety of devices to communicate (send and receive information) over long distances</li></ul> <b>Influence of Engineering, Technology, and Science on Society and the Natural World</b> <ul style="list-style-type: none"><li>• People depend on various technologies in their lives; human life would be very different without technology.</li></ul>	<b>System and System Models</b> <ul style="list-style-type: none"><li>• Objects can be described in terms of their parts and the roles those parts play in the functioning of the object.</li></ul>

\*This standard emphasizes engineering skills or ideas.

From Molecules to Organisms: Structure and Function (LS1)		
<b>1.LS1.1 Use materials to design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs.*</b>		
<p><b>Clarification Statement:</b> Examples of human problems that can be solved by mimicking plant or animal solutions could include designing clothing or equipment to protect bicyclists by mimicking turtle shells, acorn shells, and animal scales; stabilizing structures by mimicking animal tails and roots on plants; keeping out intruders by mimicking thorns on branches and animal quills; and detecting intruders by mimicking eyes and ears.</p> <p><b>Assessment Boundary:</b> N/A</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Designing Solutions</b> <ul style="list-style-type: none"> <li>Use tools and materials provided to design a device that solves a problem.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>All organisms have external parts.</li> <li>Different animals use their body parts in different ways to see, hear, grasp objects, protect themselves, move from place to place, and seek, find, and take in food, water, and air.</li> <li>Plants also have different parts (roots, stems, leaves, flowers, fruits) that help them survive and grow.</li> </ul> <b>Information Processing</b> <ul style="list-style-type: none"> <li>Animals have body parts that capture and convey different kinds of information needed for growth and survival.</li> <li>Plants also respond to some external inputs.</li> </ul> <b>Influence of Engineering, Technology, and Science on Society and the Natural World</b> <ul style="list-style-type: none"> <li>Every human-made product is designed by applying some knowledge of the natural world and is built using materials derived from the natural world.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>The shape and stability of structures of natural and designed objects are related to their functions.</li> </ul>

# Oklahoma Academic Standards for Science Grade 2

GRADE 2 (2)		
Matter and Its Interactions (PS1)		
<b>2.PS1.1 Plan and conduct an investigation to describe and classify different kinds of materials by their observable properties.</b>		
<b>Clarification Statement:</b> Observations could include color, texture, hardness, and flexibility. Patterns could include similar properties that different materials share. Investigations could include ice and snow melting or frozen objects thawing. <b>Assessment Boundary:</b> Assessment is limited to describing materials made of solids or liquids. Gases are not included.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"> <li>Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence to answer a question.</li> </ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"> <li>Different kinds of matter exist and many of them can be either a solid or liquid, depending on temperature.</li> <li>Matter can be described and classified by its observable properties.</li> </ul>	<b>Patterns</b> <ul style="list-style-type: none"> <li>Patterns in the natural and human-designed world can be observed.</li> </ul>
<b>2.PS1.2 Analyze data obtained from testing different materials to determine which materials have the properties that are best suited for the intended purpose.*</b>		
<b>Clarification Statement:</b> Examples of properties could include strength, flexibility, hardness, texture, and absorbency (e.g., paper towels could be utilized to measure absorbency and strength). <b>Assessment Boundary:</b> Assessment of qualitative measurements is limited to relative descriptions of properties, and assessment of quantitative measurements is limited to length.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"> <li>Analyze data from tests of an object or tool to determine if it works as intended.</li> </ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"> <li>Different properties are suited to different purposes.</li> </ul> <b>Influence of Engineering, Technology, and Science on Society and the Natural World</b> <ul style="list-style-type: none"> <li>Every human made product is designed by applying some knowledge of the natural world and is built using materials derived from the natural world.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Simple tests can be designed to gather evidence to support or refute student ideas about causes.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

## Oklahoma Academic Standards for Science Grade 2

### Matter and Its Interactions (PS1)

**2.PS1.3 Make observations to construct an evidence-based account of how an object made of a small set of pieces can be disassembled and made into a new object.**

**Clarification Statement:** Examples of pieces could include building blocks, or other assorted small objects. Provide students with the same number of pieces to create a different object. **Assessment Boundary:** Do not introduce terminology associated with the Law of Conservation of Matter just concepts. Chemical change is outside of this performance expectation.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Make observations (firsthand or from medal) to construct an evidence-based account for natural phenomena.</li></ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"><li>A great variety of objects can be built up from a small set of pieces.</li><li>Different properties are suited to different purposes.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Objects may break into smaller pieces and be put together into larger pieces, or change shapes.</li></ul>

**2.PS1.4 Construct an argument with evidence that some changes caused by heating or cooling can be reversed and some cannot.**

**Clarification Statement:** Demonstrations of reversible changes could include materials such as water, butter, or crayons at different temperatures. Demonstrations of irreversible changes could include cooking an egg, freezing a plant leaf, or heating paper. Arguments center on using first-hand observations as evidence to support a claim that a material can change and go back to its original form through heating and cooling. **Assessment Boundary:** Students should not be expected to identify or explain physical and chemical changes.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"><li>Construct an argument with evidence to support a claim.</li></ul>	<b>Chemical Reactions</b> <ul style="list-style-type: none"><li>Heating and cooling a substance may cause changes that can be observed.</li><li>Sometimes these changes are reversible, and sometimes they are not.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Events have causes that generate observable patterns.</li></ul>

### Connections to Scientific Literacy

#### Science Models, Laws, and Theories Explain Natural Phenomena

- Scientists search for cause and effect relationships to explain natural events.

## Oklahoma Academic Standards for Science Grade 2

### Ecosystems: Interactions, Energy, and Dynamics (LS2)

#### 2.LS2.1 Plan and conduct an investigation to determine if plants need sunlight and water to grow.

**Clarification Statement:** Investigations should be limited to testing one variable at a time. **Assessment Boundary:** Assessment is limited to testing one variable at a time, although students are not expected to understand the term variable at this time.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"> <li>Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence to answer a question.</li> </ul>	<b>Interdependent Relationships in Ecosystems</b> <ul style="list-style-type: none"> <li>Plants depend on water and light to grow.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Events have causes that generate observable patterns.</li> </ul>

#### 2.LS2.2 Develop a simple model that mimics the function of an animal in dispersing seeds or pollinating plants.\*

**Clarification Statement:** Examples of models could include placing socks on the outside of students' shoes and walking outside allows socks to gather seeds, or using a pipe cleaner to move powder (like flour) from one place to another emulating flowers being pollinated by bees or other insects. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"> <li>Develop a simple model based on evidence to represent a proposed object or tool.</li> </ul>	<b>Interdependent Relationships in Ecosystems</b> <ul style="list-style-type: none"> <li>Plants depend on animals for pollination or to move their seeds around.</li> </ul> <b>Developing Possible Solutions</b> <ul style="list-style-type: none"> <li>Designs can be conveyed through sketches, drawings, or physical models.</li> <li>These representations are useful in communicating ideas for a problem's solutions to other people.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>The shape and stability of structures of natural and designed objects are related to their function(s).</li> </ul>

\*This standard emphasizes engineering skills or ideas.

## Oklahoma Academic Standards for Science Grade 2

### Biological Unity and Diversity (LS4)

#### 2.LS4.1 Make observations of plants and animals to compare the diversity of life in different habitats.

**Clarification Statement:** Emphasis is on the diversity of living things in different habitats. Students could explore different habitats such as a neighborhood park, ponds, and the school playground. **Assessment Boundary:** Assessment does not include specific animal and plant names in specific habitats.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"> <li>Make observations (firsthand or from media) to collect data which can be used to make comparisons.</li> </ul>	<b>Biodiversity and Humans</b> <ul style="list-style-type: none"> <li>There are many different kinds of living things in any area, and they exist in different places on land and in water.</li> </ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"> <li>A system is an organized group of related objects or components.</li> </ul>

<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"> <li>Scientists look for patterns and order when making observations about the world.</li> </ul>		

### Earth's Place in the Universe (ESS1)

#### 2.ESS1.1 Use information from several sources to provide evidence that Earth events can occur quickly or slowly.

**Clarification Statement:** Examples of events and timescales could include volcanic explosions and earthquakes, which happen quickly, and erosion of rocks, which occurs slowly. **Assessment Boundary:** Assessment does not include quantitative measurements of timescales.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"> <li>Make observations from several sources to construct an evidence-based account for natural phenomena.</li> </ul>	<b>The History of Planet Earth</b> <ul style="list-style-type: none"> <li>Some events happen very quickly; others occur very slowly, over a time period much longer than one can observe.</li> </ul>	<b>Stability and Change</b> <ul style="list-style-type: none"> <li>Things may change slowly or rapidly.</li> </ul>

## Oklahoma Academic Standards for Science Grade 2

Earth Systems (ESS2)		
<b>2.ESS2.1 Compare multiple solutions designed to slow or prevent wind or water from changing the shape of the land.*</b>		
<b>Clarification Statement:</b> Examples of solutions could include different designs of dikes and windbreaks to hold back wind and water, and different designs for using shrubs, grass, and trees to hold back the land. Students could explore these ideas with sand tables or soil and water in large containers. <b>Assessment Boundary:</b> N/A		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Designing Solutions</b> <ul style="list-style-type: none"> <li>Compare multiple solutions to a problem.</li> </ul>	<b>Earth Materials and Systems</b> <ul style="list-style-type: none"> <li>Wind and water can change the shape of the land.</li> </ul> <b>Optimizing the Design Solution</b> <ul style="list-style-type: none"> <li>Because there is always more than one possible solution to a problem, it is useful to compare and test designs.</li> </ul>	<b>Stability and Change</b> <ul style="list-style-type: none"> <li>Things may change slowly or rapidly.</li> </ul>
<b>Connections to Scientific Literacy</b>		
<b>Science Addresses Questions About the Natural and Material World</b> <ul style="list-style-type: none"> <li>Scientists study the natural and material world.</li> </ul>		
*This standard emphasizes engineering skills or ideas.		
<b>2.ESS2.2 Develop a model to represent the shapes and kind of land and bodies of water in an area.</b>		
<b>Clarification Statement:</b> Examples could include a diagram, physical replica, or three-dimensional diorama. Models can be based on photographs, virtual images, or in-person observations. <b>Assessment Boundary:</b> Assessment does not include quantitative scaling in models.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"> <li>Develop a model to represent patterns in the natural world.</li> </ul>	<b>Plate Tectonics and Large-Scale System Interactions</b> <ul style="list-style-type: none"> <li>Maps show where things are located.</li> <li>One can map the shapes and kinds of land and water in any area.</li> </ul>	<b>Patterns</b> <ul style="list-style-type: none"> <li>Patterns in the natural world can be observed.</li> </ul>

Earth Systems (ESS2)		
2.ESS2.3 Obtain information to identify where water is found on Earth and that it can be solid or liquid.		
<b>Clarification Statement:</b> Information can be obtained through text, media, or in-person observations. Patterns can be observed through identifying where solid water (ice) is found and where liquid water can be found. <b>Assessment Boundary:</b> N/A		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"><li>Obtain information using various texts and media that will be useful in answering a scientific question and/or support a scientific claim.</li></ul>	<b>The Roles of Water in Earth's Surface Processes</b> <ul style="list-style-type: none"><li>Water is found in the ocean, rivers, lakes, and ponds.</li><li>Water exists as solid ice and in liquid form.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Patterns in the natural world can be observed.</li></ul>

Draft

GRADE 3 (3)		
Motion and Stability: Forces and Interactions (PS2)		
3.PS2.1 Plan and conduct investigations on the effects of balanced and unbalanced forces on the motion of an object.		
<b>Clarification Statement:</b> Examples could include that an unbalanced force on one side of a ball can make it start moving and balanced forces pushing on a box from opposite sides will not produce any motion at all. <b>Assessment Boundary:</b> Assessment is limited to one variable at a time: number, size, or direction of forces. Assessment does not include quantitative force size, only qualitative and relative. Assessment is limited to gravity being addressed as a force that pulls objects down.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered.</li></ul>	<b>Forces and Motion</b> <ul style="list-style-type: none"><li>Each force acts on one particular object and has both strength and a direction.</li><li>An object at rest typically has multiple forces acting on it, but they add to give zero net force on the object.</li><li>Forces that do not sum to zero can cause changes in the object's speed or direction of motion.</li></ul> <b>Types of Interactions</b> <ul style="list-style-type: none"><li>Objects in contact exert forces on each other.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships are routinely identified.</li></ul>
Connections to Scientific Literacy		
<b>Scientific Investigations Use a Variety of Methods</b> <ul style="list-style-type: none"><li>Science investigations use a variety of methods, tools, and techniques.</li></ul>		

**Motion and Stability: Forces and Interactions (PS2)**

**3.PS2.2 Make observations and/or measurements of an object's motion to provide evidence that a pattern can be used to predict future motion.**

**Clarification Statement:** Examples of motion with a predictable pattern could include a child swinging in a swing (pendulum), an object rolling down a ramp from different heights, a ball rolling back and forth in a bowl, and two children on a see-saw. **Assessment Boundary:** Assessment does not include technical terms such as magnitude, velocity, momentum, vector quantity, period, and frequency. Assessment can include the concept that some quantities need both size and direction to be described.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"> <li>Make observations and/or measurements to produce data to serve as a basis for evidence for an explanation of a phenomenon.</li> </ul>	<b>Forces and Motion</b> <ul style="list-style-type: none"> <li>The patterns of an object's motion in various situations can be observed and measured; when that past motion exhibits a regular pattern, future motion can be predicted from it.</li> </ul>	<b>Patterns</b> <ul style="list-style-type: none"> <li>Patterns of change can be used to make predictions.</li> </ul>
<b>Connections to Scientific Literacy</b>		
<b>Science Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"> <li>Science findings are based on recognizing patterns.</li> </ul>		

**Motion and Stability: Forces and Interactions (PS2)**

**3.PS2.3 Ask questions to determine cause and effect relationships of electric or magnetic interactions between two objects not in contact with each other.**

**Clarification Statement:** Examples of an electric force could include the force on hair from an electrically charged balloon, and the electrical forces between a charged rod and pieces of paper. Examples of magnetic force could include the force between two permanent magnets, the force between an electromagnet and steel paper clips, and the force exerted by one magnet versus the force exerted by two magnets. Examples of cause and effect relationships could include how the distance between objects affects strength of the force and how the orientation of magnets affects the direction of the magnetic force. **Assessment Boundary:** Assessment is limited to forces produced by objects that can be manipulated by students, and electrical interactions are limited to static electricity.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Asking Questions</b> <ul style="list-style-type: none"><li>Ask questions that can be investigated based on patterns such as cause and effect relationships.</li></ul>	<b>Types of Interactions</b> <ul style="list-style-type: none"><li>Electric and magnetic forces between a pair of objects do not require that the objects be in contact. The sizes of the forces in each situation depends on the properties of the objects and their distances apart, and, for forces between two magnets, on their orientation to each other.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships are routinely identified, tested, and used to explain change.</li></ul>

DCI Code & Category		
3.PS2.4 Define a simple design problem that can be solved by applying scientific ideas about magnets.*		
<b>Clarification Statement:</b> Examples of problems could include a door that will not stay closed, a toy box lid that won't stay closed, or two objects that keep colliding. <b>Assessment Boundary:</b> N/A		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Define Problems</b> <ul style="list-style-type: none"><li>Define a simple problem that can be solved through the development of a new or improved object or tool.</li></ul>	<b>Types of Interactions</b> <ul style="list-style-type: none"><li>Electric and magnetic forces between a pair of objects do not require that the objects be in contact. ## Oklahoma Academic Standards for Science Grade 3

### From Molecules to Organisms: Structure and Function (LS1)

**3.LS1.1** Develop and use models to describe that organisms have unique and diverse life cycles but all have a common pattern of birth, growth, reproduction, and death.

**Clarification Statement:** Changes different organisms go through during their life form a pattern. Organism life cycles that can be studied include mealworms, dandelions, lima beans, dogs, and butterflies. **Assessment Boundary:** Assessment includes animal and plant life cycles. Plant life cycles are limited to those of flowering plants. Assessment does not include details of human reproduction or microscopic organisms.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop models to describe phenomena.</li></ul>	<b>Growth and Development of Organisms</b> <ul style="list-style-type: none"><li>Reproduction is essential to the continued existence of every kind of organism.</li><li>Plants and animals have unique and diverse life cycles.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Patterns of change can be used to make predictions.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"><li>Science findings are based on recognizing patterns.</li></ul>		

### Ecosystems: Interactions, Energy, and Dynamics (LS2)

**3.LS2.1** Construct an argument that some animals form groups that help members survive.

**Clarification Statement:** Arguments could include examples of group behavior such as division of labor in a bee colony, flocks of birds staying together to confuse or intimidate predators, or wolves hunting in packs to more efficiently catch and kill prey. When animals are no longer part of their group, they may not survive as well. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engagement in Argument from Evidence</b> <ul style="list-style-type: none"><li>Construct an argument from evidence, data, and/or a model.</li></ul>	<b>Social Interactions and Group Behavior</b> <ul style="list-style-type: none"><li>Being part of a group helps animals obtain food, defend themselves, and cope with changes.</li><li>Groups may serve different functions and vary dramatically in size.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships are routinely used to explain change.</li></ul>

**Heredity: Inheritance and Variation of Traits (LS3)**

**3.LS3.1 Analyze and interpret data to provide evidence that plants and animals have traits inherited from parents and that variation of these traits exists in a group of similar organisms.**

**Clarification Statement:** Patterns are the similarities and differences in traits shared between offspring and their parents, or among siblings. Emphasis is on organisms other than humans. **Assessment Boundary:** Assessment does not include genetic mechanisms of inheritance and prediction of traits. Assessment is limited to non-human examples.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"> <li>Analyze and interpret data to make sense of phenomena using logical reasoning.</li> </ul>	<b>Inheritance of Traits</b> <ul style="list-style-type: none"> <li>Many characteristics of organisms are inherited from their parents.</li> </ul> <b>Variation of Traits</b> <ul style="list-style-type: none"> <li>Different organisms vary in how they look and function because they have different inherited information.</li> </ul>	<b>Patterns</b> <ul style="list-style-type: none"> <li>Similarities and differences in patterns can be used to sort and classify natural phenomena.</li> </ul>

**3.LS3.2 Use evidence to support the explanation that traits can be influenced by the environment.**

**Clarification Statement:** Examples of the environment affecting a trait could include that normally tall plants grown with insufficient water are stunted; a pet dog that is given too much food and little exercise may become overweight; and animals who teach their offspring skills like hunting. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"> <li>Use evidence (e.g., observations, patterns) to support an explanation.</li> </ul>	<b>Inheritance of Traits</b> <ul style="list-style-type: none"> <li>Other characteristics result from individuals' interactions with the environment, which can range from diet to learning. Many characteristics involved both inheritance and environment.</li> </ul> <b>Variation of Traits</b> <ul style="list-style-type: none"> <li>The environment also affects the traits that an organism develops.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Cause and effect relationships are routinely identified and used to explain changes.</li> </ul>

**Biological Unity and Diversity (LS4)**

**3.LS4.1 Analyze and interpret data from fossils to provide evidence of the organisms and the environments in which they lived long ago.**

**Clarification Statement:** Examples of data could include type, size, and distribution of fossil organisms. Examples of fossils and environments could include marine fossils found on dry land, tropic plant fossils found in Arctic areas, and fossils of extinct organisms. **Assessment Boundary:** Assessment does not include identification of specific fossils or present plants and animals. Assessment is limited to major fossil types and relative ages.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"> <li>Analyze and interpret data to make sense of phenomena using logical reasoning.</li> </ul>	<b>Evidence of Common Ancestry and Diversity</b> <ul style="list-style-type: none"> <li>Some kinds of plants and animals that once lived on Earth are no longer found anywhere.</li> <li>Fossils provide evidence about the types of organisms that lived long ago and also about the nature of their environments.</li> </ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"> <li>Observable phenomena exist from very short to very long time periods.</li> </ul>

## Oklahoma Academic Standards for Science Grade 3

### Biological Unity and Diversity (LS4)

**3.LS4.2 Use evidence to construct an explanation for how the variations in characteristics among individuals of the same species may provide advantages in surviving and reproducing.**

**Clarification Statement:** Examples of cause and effect relationships could be plants that have larger thorns than other plants may be less likely to be eaten by predators; and animals that have better camouflage coloration than other animals may be more likely to survive and therefore more likely to leave offspring. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"> <li>Use evidence (e.g., observations, patterns) to construct an explanation.</li> </ul>	<b>Natural Selection</b> <ul style="list-style-type: none"> <li>Sometimes the differences in characteristics between individuals of the same species provide advantages in surviving, finding mates, and reproducing.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Cause and effect relationships are routinely identified, tested, or used to explain change.</li> </ul>

**3.LS4.3 Construct an argument with evidence that in a particular habitat some organisms can survive well, some less well, and some cannot survive at all.**

**Clarification Statement:** Examples of evidence could include needs and characteristics of the organisms and habitats involved. The organisms and their habitat make up a system in which the parts depend on each other. At no time should animals be put in danger to collect evidence. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Construct an argument with evidence.</li> </ul>	<b>Adaptation</b> <ul style="list-style-type: none"> <li>For any particular environment, some kinds of organisms survive well, some survive less well, and some cannot survive at all.</li> <li>Changes in an organism's habitat are sometimes beneficial to it and sometimes harmful.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Cause and effect relationships are routinely identified and used to explain change.</li> </ul>

Biological Unity and Diversity (LS4)

**3.LS4.4 Make a claim about the merit of a solution to a problem caused when the environment changes and the types of plants and animals that live there may change.\***

**Clarification Statement:** Examples of environmental changes could include changes in land characteristics, water distribution, temperature, food, and other organisms. **Assessment Boundary:** Assessment is limited to a single environmental change. Assessment does not include the greenhouse effect or climate change.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Engaging in Argument from Evidence</b></p> <ul style="list-style-type: none"> <li>Make a claim about the merit of a solution to a problem by citing relevant evidence about how it meets the criteria and constraints of the problem.</li> </ul>	<p><b>Ecosystem Dynamics, Functioning, and Resilience</b></p> <ul style="list-style-type: none"> <li>When the environment changes in ways that affect a place's physical characteristics, temperature, or availability of resources, some organisms survive and reproduce, others move to new locations, yet others move into the transformed environment, and some die.</li> </ul> <p><b>Biodiversity and Humans</b></p> <ul style="list-style-type: none"> <li>Populations live in a variety of habitats, and change in those habitats affects the organisms living there.</li> </ul> <p><b>Interdependence of Science, Engineering, and Technology</b></p> <ul style="list-style-type: none"> <li>Knowledge of relevant scientific concepts and research findings is important in engineering.</li> </ul>	<p><b>Systems and System Models</b></p> <ul style="list-style-type: none"> <li>A system can be described in terms of its components and their interactions.</li> </ul>

## Oklahoma Academic Standards for Science Grade 3

Earth's Systems (ESS2)		
<b>3.ESS2.1 Represent data in tables and graphical displays to describe typical weather conditions expected during a particular season.</b>		
<b>Clarification Statement:</b> Examples of data at this grade level could include average temperature, precipitation, and wind direction. <b>Assessment Boundary:</b> Assessment of graphical displays is limited to frequency tables, line plots, pictographs, and single bar graphs. Students are not expected to calculate averages but simply to represent them in graphical form.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"><li>Represent data in tables and various graphical displays (bar graphs and pictographs) to reveal patterns that indicate relationships.</li></ul>	<b>Weather and Climate</b> <ul style="list-style-type: none"><li>Scientists record patterns of the weather across different times and areas so that they can make predictions about what kind of weather might happen next.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Patterns of change can be used to make predictions.</li></ul>
<b>3.ESS2.2 Obtain and combine information to describe climates in different regions of the world.</b>		
<b>Clarification Statement:</b> Information could include hours of daylight, amount of precipitation, temperature, seasons, and wind. Descriptions could include the use of frequency tables, line plots, pictographs, and single bar graphs. Climate data should include weather conditions over multiple years. <b>Assessment Boundary:</b> Assessments do not include causes of seasons.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"><li>Obtain and combine information from books and other reliable media to explain phenomena.</li></ul>	<b>Weather and Climate</b> <ul style="list-style-type: none"><li>Climate describes a range of an area's typical weather conditions and the extent to which those conditions vary over years to centuries.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Patterns of change can be used to make predictions.</li></ul>

Earth and Human Activity (ESS3)

**3.ESS3.1 Make a claim about the merit of a design solution that reduces the impacts of a weather-related hazard.\***

**Clarification Statement:** Examples of design solutions to weather-related hazards could include barriers to prevent flooding, wind/hail resistant roofs/windows, textured walking surfaces for ice, tornado shelters, and lightning rods. While earthquakes, volcanoes, and tsunamis are natural hazards, they are not caused by weather phenomena. **Assessment Boundary:** Assessments are limited to weather-related hazards only.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Make a claim about the merit of a solution to a problem by citing relevant evidence about how it meets the criteria and constraints of the problem.</li> </ul>	<b>Natural Hazards</b> <ul style="list-style-type: none"> <li>A variety of natural hazards result from natural processes.</li> <li>Humans cannot eliminate natural hazards but can take steps to reduce their impact.</li> </ul> <b>Influence of Engineering, Technology, and Science on Society and the Natural World</b> <ul style="list-style-type: none"> <li>Engineers improve existing technologies or develop new ones to increase their benefits (e.g., satellite monitoring of weather patterns), decrease known risks (e.g., textured walking surfaces), and meet societal demands (e.g., weather alerts).</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Cause and effect relationships are routinely identified, tested, and used to explain change.</li> </ul>
<b>Connections to Scientific Literacy</b>		
<b>Science is a Human Endeavor</b> <ul style="list-style-type: none"> <li>Science affects everyday life.</li> </ul>		

\*This standard emphasizes engineering skills or ideas.

GRADE 4 (4)		
Energy (PS3)		
<b>4.PS3.1 Use evidence to construct an explanation relating the speed of an object to the energy of that object.</b>		
<b>Clarification Statement:</b> Energy can be moved from place to place by moving objects (e.g., wind moving a sail then moving a boat, throwing a ball, or paddling a boat). As objects increase in speed they possess more energy (e.g., ball rolling down a ramp). <b>Assessment Boundary:</b> Assessment does not include quantitative measures of changes in the speed of an object (acceleration) or on any precise, quantitative, or complete definition of energy.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Use evidence (e.g., measurements, observations, patterns) to construct an explanation.</li></ul>	<b>Definitions of Energy</b> <ul style="list-style-type: none"><li>The faster a given object is moving, the more energy it possesses.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Energy can be transferred in various ways and between objects.</li></ul>

Energy (PS3)

**4.PS3.2 Make observations to provide evidence that energy can be transferred from place to place by sound, light, heat, and electric currents.**

**Clarification Statement:** Light, heat, sound, and electric currents transfer energy. Examples of this can include sound from a radio, light from a flashlight, the Sun heating a window pane, and currents to electronic devices. When energy is transferred it can stay in the same form or change forms. **Assessment Boundary:** Assessment does not include quantitative measurements of energy or the difference between transferring and transforming energy.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Make observations to produce data to serve as the basis for evidence for an explanation of a phenomena or test a design solution.</li></ul>	<b>Definitions of Energy</b> <ul style="list-style-type: none"><li>Energy can be moved from place to place by moving objects or through sound, light, or electric currents.</li></ul> <b>Conservation of Energy and Energy Transfer</b> <ul style="list-style-type: none"><li>Energy is present whenever there are moving objects, sound, light, or heat.</li><li>When objects collide, energy can be transferred from one object to another, thereby changing their motion. In such collisions, some energy is typically also transferred to the surrounding air; as a result, the air gets heated and sound is produced.</li><li>Light also transfers energy from place to place.</li><li>Energy can also be transferred from place to place by electric currents, which can then be used locally to produce motion, sound, heat, or light.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Energy can be transferred in various ways and between objects.</li></ul>

Energy (PS3)		
<b>4.PS3.3 Ask questions and predict outcomes about the changes in energy that occur when objects collide.</b>		
<b>Clarification Statement:</b> Collisions include any interactions between objects when they come in contact with one another and transfer energy. Emphasis is on the change in energy due to the change in speed, not forces, as objects interact. <b>Assessment Boundary:</b> Assessment does not include quantitative measures of changes in the speed of an object (acceleration) or quantitative measurements of energy.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Asking Questions</b> <ul style="list-style-type: none"><li>Ask questions that can be investigated and predict reasonable outcomes based on patterns such as cause and effect relationships.</li></ul>	<b>Definitions of Energy</b> <ul style="list-style-type: none"><li>Energy can be moved from place to place by moving objects or through sound, light, or electric currents.</li></ul> <b>Conservation of Energy and Energy Transfer</b> <ul style="list-style-type: none"><li>Energy is present whenever there are moving objects, sound, light, or heat.</li><li>When objects collide, energy can be transferred from one object to another, thereby changing their motion. In such collisions, some energy is typically also transferred to the surrounding air; as a result, the air gets heated and sound is produced.</li></ul> <b>Relationship Between Energy and Forces</b> <ul style="list-style-type: none"><li>When objects collide, the contact forces transfer energy so as to change the objects' motions.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Energy can be transferred in various ways and between objects.</li></ul>

## Oklahoma Academic Standards for Science Grade 4

Energy (PS3)		
<b>4.PS3.4 Apply scientific ideas to design, test, and refine a device that converts energy from one form to another.*</b>		
<b>Clarification Statement:</b> Examples of devices could include mousetrap cars, rubber band-powered vehicles, electric circuits that convert electrical energy into light, sound, or motion energy of a vehicle, and a passive solar heater that converts light into heat. Examples of constraints could include the materials, cost, or time to design the device. <b>Assessment Boundary:</b> N/A		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Designing Solutions</b> <ul style="list-style-type: none"> <li>Applying scientific ideas to solve design problems.</li> </ul>	<b>Conservation of Energy and Energy Transfer</b> <ul style="list-style-type: none"> <li>Energy can be transferred from place to place by electric currents, which can then be used locally to produce motion, sound, heat, or light. The currents may have been produced to begin with by transforming the energy of motion into electrical energy.</li> </ul> <b>Energy in Chemical Processes and Everyday Life</b> <ul style="list-style-type: none"> <li>The expression “produce energy” typically refers to the conversion of stored energy into a desired form for practical use.</li> </ul> <b>Defining Engineering Problems</b> <ul style="list-style-type: none"> <li>Possible solutions to a problem are limited by available materials and resources (constraints). Different proposals for solutions can be compared on the basis of how well each one meets the specified criteria for success or how well each takes the constraints into account.</li> <li>The success of a designed solution is determined by considering the desired features of a solution (criteria).</li> </ul> <b>Influence of Science, Engineering, and Technology on Society and the Natural World</b> <ul style="list-style-type: none"> <li>Engineers improve existing technologies or develop new ones.</li> </ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"> <li>Energy can be transferred in various ways and between objects.</li> </ul>
<b>Connections to Scientific Literacy</b>		
<b>Science is a Human Endeavor</b> <ul style="list-style-type: none"> <li>Most scientists and engineers work in teams.</li> <li>Science affects everyday life.</li> </ul>		

\*This standard emphasizes engineering skills or ideas.

Waves and Their Applications in Technologies for Information Transfer (PS4)

**4.PS4.1 Develop and use a model of waves to describe patterns in terms of amplitude and wavelength and to show that waves can cause objects to move.**

**Clarification Statement:** Examples of models could include diagrams, analogies, and physical models using items like stringed beads, rubber bands, Slinkys, or yarn to illustrate wavelength and amplitude of waves. Examples of wave patterns that cause objects to move up and down or side to side could include the vibrating patterns associated with sound, or the vibrating patterns of seismic waves produced by earthquakes.

**Assessment Boundary:** Assessment does not include interference effects, electromagnetic waves, non-periodic waves, or quantitative models of amplitude and wavelength.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop a model using an analogy, example, or abstract representation to describe a scientific principle.</li></ul>	<b>Wave Properties</b> <ul style="list-style-type: none"><li>Waves, which are regular patterns of motion, can be made in water by disturbing the surface.</li><li>When waves move across the surface of deep water, the water goes up and down in place; there is no net motion in the direction of the wave except when the water meets a beach.</li><li>Waves of the same type can differ in amplitude (height of wave) and wavelength (spacing between wave peaks).</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Similarities and differences in patterns can be used to sort and classify designed products.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"><li>Science findings are based on recognizing patterns.</li></ul>		

Waves and Their Applications in Technologies for Information Transfer (PS4)

**4.PS4.2 Develop a model to describe the light reflecting from objects and entering the eye allows objects to be seen.**

**Clarification Statement:** Models would identify components such as a source of the light, objects that are seen, the path of the light, and the eye. Models could be used to investigate what happens when one of the components changes (e.g., close the eyes, block the light, or change the light path). **Assessment Boundary:** Assessment does not include knowledge of specific colors reflected and seen, the cellular mechanisms of vision, or how the retina works.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"> <li>Develop a model to describe phenomena.</li> </ul>	<b>Electromagnetic Radiation</b> <ul style="list-style-type: none"> <li>An object can be seen when light reflected from its surface enters the eyes.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Cause and effect relationships are routinely identified.</li> </ul>

**4.PS4.3 Generate and compare multiple solutions that use patterns to transfer information.\***

**Clarification Statement:** Examples of solutions could include drums sending coded information through sound waves, using a grid of 1's and 0's representing black and white to send information about a picture, QR codes, barcodes, and using Morse code to send a text. **Assessment Boundary:** Assessment does not include creating or writing digital code.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Designing Solutions</b> <ul style="list-style-type: none"> <li>Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design solution.</li> </ul>	<b>Information Technologies and Instrumentation</b> <ul style="list-style-type: none"> <li>Digitized information can be transmitted over long distances without significant degradation.</li> <li>High-tech devices, such as computers or cell phones, can receive and decode information - convert it from digitized form to voice - and vice versa.</li> </ul> <b>Optimizing the Design Solution</b> <ul style="list-style-type: none"> <li>Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints.</li> </ul> <b>Interdependence of Science, Engineering, and Technology</b> <ul style="list-style-type: none"> <li>Knowledge of relevant scientific concepts and research findings is important in engineering.</li> </ul>	<b>Patterns</b> <ul style="list-style-type: none"> <li>Similarities and differences in patterns can be used to sort and classify designed products.</li> </ul>

## Oklahoma Academic Standards for Science Grade 4

From Molecules to Organisms: Structure and Processes (LS1)		
<b>4.LS1.1 Construct an argument that plants and animals have internal and external structures that function to support survival, growth, behavior, and reproduction.</b>		
<b>Clarification Statement:</b> Examples of external structures could include thorns, stems, roots, colored petals, skin, teeth, and claws. Examples of internal structures could include heart, stomach, lungs, and brain. <b>Assessment Boundary:</b> Assessment is limited to macroscopic structures within plant and animal systems.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Construct an argument with evidence, data, and/or a model.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>Plants and animals have both internal and external structures that serve various functions in growth, survival, behavior, and reproduction.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>Substructures have shapes and parts that serve functions.</li> </ul>
<b>4.LS1.2 Use a model to describe that animals receive different types of information through their senses, process the information in their brain, and respond to the information in different ways.</b>		
<b>Clarification Statement:</b> Emphasis is on systems of information transfer. Examples of response to stimuli include a dog is hot and lies in the shade, a rabbit hears a noise and runs away, and a person is cold so they put on a jacket. <b>Assessment Boundary:</b> Assessment does not include the mechanisms by which the brain stores and recalls information or the mechanisms of how sensory receptors function.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and using Models</b> <ul style="list-style-type: none"> <li>Use a model to test interactions concerning the functioning of a natural system.</li> </ul>	<b>Information Processing</b> <ul style="list-style-type: none"> <li>Different sense receptors are specialized for particular kinds of information, which may be then processed by the animal's brain.</li> <li>Animals are able to use their perceptions and memories to guide their actions.</li> </ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"> <li>A system can be described in terms of its components and their interactions.</li> </ul>

Earth's Place in the Universe (ESS1)

**4.ESS1.1 Identify evidence from patterns in rock formations and fossils in rock layers to support an explanation for changes in a landscape over time.**

**Clarification Statement:** Examples of evidence from patterns could include rock layers with marine shell fossils above rock layers with plant fossils and no shells, indicating a change from land to water over time; and a canyon with different rock layers in the walls and a river in the bottom, indicating that over time a river cut through the rock. **Assessment Boundary:** Assessment does not include specific knowledge or memorization of specific rock formation and layers. Assessment is limited to relative time.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Identify the evidence that supports particular points in an explanation.</li></ul>	<b>The History of Planet Earth</b> <ul style="list-style-type: none"><li>Local, regional, and global patterns of rock formations reveal changes over time due to Earth forces, such as earthquakes.</li><li>The presence and location of certain fossil types indicate the order in which rock layers were formed.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Patterns can be used as evidence to support an explanation.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge Assumes an Order and Consistency in Natural Systems</b> <ul style="list-style-type: none"><li>Science assumes consistent patterns in natural systems.</li></ul>		

Earth's Systems (ESS2)		
<b>4.ESS2.1 Plan and conduct an investigation to gather evidence on the effects of water, ice, wind, and vegetation on the rate of weathering and erosion.</b>		
<b>Clarification Statement:</b> Emphasis of variables to test could include angle of slope in the downhill movement of water, amount of vegetation, speed of wind, relative rate of deposition, cycles of freezing and thawing of water, cycles of heating and cooling, and volume of water flow. <b>Assessment Boundary:</b> Assessment is limited to a single form of weathering or erosion.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence.</li></ul>	<b>Earth Materials and Systems</b> <ul style="list-style-type: none"><li>Rainfall helps to shape the land and affects the types of living things found in a region. Water, ice, wind, living organisms, and gravity break rocks, soils, and sediments into smaller particles and move them around.</li></ul> <b>Biogeology</b> <ul style="list-style-type: none"><li>Living things affect the physical characteristics of their regions.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships are routinely identified, tested, and used to explain change.</li></ul>

Earth's Systems (ESS2)		
4.ESS2.2 Analyze and interpret data from maps to describe patterns of Earth's features.		
<b>Clarification Statement:</b> Maps can include topographic maps of Earth's land and ocean floor, as well as maps of locations of mountains, continental boundaries, volcanoes, and earthquakes. <b>Assessment Boundary:</b> N/A		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"><li>Analyze and interpret data to make sense of phenomena using logical reasoning.</li></ul>	<b>Plate Tectonics and Large-Scale System Interactions</b> <ul style="list-style-type: none"><li>The locations of mountain ranges, deep ocean trenches, ocean floor structures, earthquakes, and volcanoes occur in patterns.</li><li>Most earthquakes and volcanoes occur in bands that are often along the boundaries between continents and oceans.</li><li>Major mountain chains form inside continents or near their edges.</li><li>Maps can help locate the different land and water features where people live and in other areas of Earth.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Patterns can be used as evidence to support an explanation.</li></ul>

Earth and Human Activity (ESS3)

**4.ESS3.1 Obtain and combine information to describe that energy and fuels are derived from renewable and non-renewable resources and how their uses affect the environment.**

**Clarification Statement:** Examples of renewable energy resources could include wind energy, water behind dams, and sunlight; non-renewable energy resources could include fossil fuels (e.g., coal, oil, natural gas). Examples of environmental effects could include loss of habitat due to dams or surface mining, and air pollution from burning fossil fuels. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"><li>Obtain and combine information from books and other reliable media to explain phenomena.</li></ul>	<b>Natural Resources</b> <ul style="list-style-type: none"><li>Energy and fuels that humans use are derived from natural sources, and their use affects the environment in multiple ways.</li><li>Some resources are renewable over time, and others are not.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships are routinely identified, tested, and used to explain change.</li></ul>

Earth and Human Activity (ESS3)

4.ESS3.2 Generate and compare multiple solutions to reduce the impacts of natural Earth processes on humans.\*

**Clarification Statement:** Examples of solutions could include designing an earthquake resistant building, improving monitoring of volcanic activity, and constructing waterways for flood waters. **Assessment Boundary:** Assessment is limited to earthquakes, floods, tsunamis, and volcanic eruptions.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Designing Solutions</b> <ul style="list-style-type: none"><li>Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design solution.</li></ul>	<b>Natural Hazards</b> <ul style="list-style-type: none"><li>A variety of hazards result from natural processes (e.g., earthquakes, tsunamis, volcanic eruptions).</li><li>Humans cannot eliminate the hazards but can take steps to reduce their impacts.</li></ul> <b>Designing Solutions to Engineering Problems</b> <ul style="list-style-type: none"><li>Testing a solution involves investigating how well it performs under a range of likely conditions.</li></ul> <b>Influence of Science, Engineering, and Technology on Society and the Natural World</b> <ul style="list-style-type: none"><li>Engineers improve existing technologies or develop new ones to increase their benefits, to decrease known risks, and to meet societal demands.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships are routinely identified and used to explain change.</li></ul>

\*This standard emphasizes engineering skills or ideas.

GRADE 5 (5)		
Matter and Its Interactions (PS1)		
<b>5.PS1.1 Develop a model to describe that matter is made of particles too small to be seen.</b>		
<b>Clarification Statement:</b> Examples of evidence that could be utilized in building models include adding air to expand a basketball, compressing air in a syringe, dissolving sugar in water, and evaporating salt water. <b>Assessment Boundary:</b> Assessment does not include atomic scale mechanism of evaporation and condensation or defining the unseen particles.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop a model to describe phenomena.</li></ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"><li>Matter of any type can be subdivided into particles that are too small to see, but even then, the matter still exists and can be detected by other means.</li><li>A model showing that gases are made from matter particles that are too small to see and are moving freely around in space can explain many observations, including the inflation and shape of a balloon and the effects of air on larger particles or objects.</li></ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"><li>Natural objects exist from the very small to the immensely large.</li></ul>

**Matter and Its Interactions (PS1)**

**5.PS1.2 Measure and graph quantities to provide evidence that regardless of the type of change that occurs when heating, cooling, or mixing substances, the total weight of matter is conserved.**

**Clarification Statement:** Examples of reactions or changes could include phase changes, dissolving, and mixing that forms new substances. Measurements can be organized in tables, charts, and graphs and can be used as evidence that weight is conserved. **Assessment Boundary:** Assessment does not include distinguishing between mass and weight.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Use Mathematics and Computational Thinking</b> <ul style="list-style-type: none"><li>Represent data in graphical displays (bar graphs, pictographs, and/or pie charts) to reveal patterns that indicate relationships.</li></ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"><li>The amount (weight) of matter is conserved when it changes form, even in transitions in which it seems to vanish.</li></ul> <b>Chemical Reactions</b> <ul style="list-style-type: none"><li>No matter what reaction or change in properties occurs, the total weight of the substances does not change.</li></ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"><li>Standard units are used to measure and describe physical quantities such as weight, time, temperature, and volume.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge Assumes an Order and Consistency in Natural Systems</b> <ul style="list-style-type: none"><li>Science assumes consistent patterns in natural systems.</li></ul>		

## Oklahoma Academic Standards for Science Grade 5

### Matter and Its Interactions (PS1)

#### 5.PS1.3 Make observations and measurements to identify materials based on their properties.

**Clarification Statement:** Observations can be based on direct experiences with materials and comparisons of materials. Examples of materials to be identified could include powders (e.g., baking soda, cornstarch, sugar), metals, minerals, and liquids. Examples of properties could include color, hardness, reflectivity, electrical conductivity, thermal conductivity, response to magnetic forces, and solubility. **Assessment Boundary:** Assessment does not include density or distinguishing mass and weight. At this grade level, no attempt is made to define the unseen particles or explain the atomic-scale mechanism of evaporation and condensation.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Make observations and measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon.</li></ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"><li>Measurements of a variety of properties can be used to identify materials.</li></ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"><li>Standard units are used to measure and describe physical quantities such as weight, time, temperature, and volume.</li></ul>

#### 5.PS1.4 Conduct an investigation to determine whether the mixing of two or more substances results in new substances.

**Clarification Statement:** Examples of interactions forming new substances can include mixing baking soda and vinegar. Examples of interactions not forming new substances can include mixing baking soda and water. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered.</li></ul>	<b>Chemical Reactions</b> <ul style="list-style-type: none"><li>When two or more different substances are mixed, a new substance with different properties may be formed.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships are routinely identified, tested, and used to explain change.</li></ul>

## Oklahoma Academic Standards for Science Grade 5

### Motion and Stability: Forces and Interactions (PS2)

**5.PS2.1 Support an argument, with evidence, that Earth’s gravitational force pulls objects downward toward the center of the Earth.**

**Clarification Statement:** “Downward” is a local description of the direction that points toward the center of the spherical Earth. Earth applies a force on objects that pulls them towards its center, commonly referred to as “downward”. Evidence could be drawn from diagrams, models, and data that are provided. **Assessment Boundary:** Mathematical representation of gravitational force is not assessed.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Construct and/or support an argument with evidence, data, and/or a model.</li> </ul>	<b>Types of Interactions</b> <ul style="list-style-type: none"> <li>The gravitational force of Earth acting on an object near Earth’s surface pulls that object toward the planet’s center.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Cause and effect relationships are routinely identified, tested, and used to explain change.</li> </ul>

### Energy (PS3)

**5.PS3.1 Use models to describe that energy in animals’ food (used for body repair, growth, motion, and to maintain body warmth) was once energy from the Sun.**

**Clarification Statement:** Examples of models could include diagrams and flow-charts. **Assessment Boundary:** Assessment does not include cellular mechanisms of digestive absorption.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"> <li>Use models to describe phenomena.</li> </ul>	<b>Energy in Chemical Processes and Everyday Life</b> <ul style="list-style-type: none"> <li>The energy released from food was once energy from the Sun that was captured by plants in the chemical process that forms plant matter (from air and water).</li> </ul> <b>Organization for Matter and Energy Flow in Organisms</b> <ul style="list-style-type: none"> <li>Food provides animals with the materials they need for body repair and growth, energy they need to maintain body warmth, and for motion.</li> </ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"> <li>Energy can be transferred in various ways and between objects.</li> </ul>

From Molecules to Organisms: Structure and Processes (LS1)

5.LS1.1 Support an argument that plants get the materials they need for growth chiefly from air and water.

**Clarification Statement:** While energy for plant growth comes from the Sun, material for plant growth comes chiefly from air and water, not from the soil. Emphasis is on the idea that plant matter comes mostly from air and water, not from the soil. **Assessment Boundary:** Assessment does not include molecular explanations of photosynthesis.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"><li>Support an argument with evidence, data, or a model.</li></ul>	<b>Energy in Chemical Processes and Everyday Life</b> <ul style="list-style-type: none"><li>The energy released from food was once energy from the Sun that was captured by plants in the chemical process that forms plant matter (from air and water).</li></ul> <b>Organization for Matter and Energy Flow in Organisms</b> <ul style="list-style-type: none"><li>Plants acquire their material for growth chiefly from air and water.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Matter is transported into, out of, and within systems.</li></ul>

**Ecosystems: Interactions, Energy, and Dynamics (LS2)**

**5.LS2.1 Develop a model to describe the movement of matter among plants, animals, decomposers, and the environment.**

**Clarification Statement:** Emphasis is on the idea that matter in systems cycle among living and nonliving things (air, water, decomposed materials in soil). Examples of systems could include organisms, ecosystems, and Earth. **Assessment Boundary:** Assessment does not include photosynthesis or molecular explanations.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"> <li>Develop a model to describe phenomena.</li> </ul>	<b>Interdependent Relationships Ecosystems</b> <ul style="list-style-type: none"> <li>The food of almost any kind of animal can be traced back to plants.</li> <li>Organisms are related in food webs in which some animals eat plants for food and other animals eat the animals that eat plants.</li> <li>Some organisms, such as fungi and bacteria, break down dead organisms (both plants, plant parts, and animals) and therefore operate as “decomposers.”</li> <li>Decomposition eventually restores (recycles) some materials back to the soil.</li> <li>A healthy ecosystem is one in which multiple species of different types are each able to meet their needs in a relatively stable web of life.</li> </ul> <b>Cycles of Matter and Energy Transfer in Ecosystems</b> <ul style="list-style-type: none"> <li>Matter cycles between the air and soil, and among plants, animals, and microbes as these organisms live and die.</li> <li>Organisms obtain gases and water from the environment, and release waste matter (gas, liquid, or solid) back into the environment.</li> </ul>	<b>System and System Models</b> <ul style="list-style-type: none"> <li>A system can be described in terms of its components and their interactions.</li> </ul>

**Connections to Scientific Literacy**

**Science Models, Laws, Mechanisms, and Theories Explain Natural Phenomena**

- Science explanations describe the mechanisms for natural events.

## Oklahoma Academic Standards for Science Grade 5

### Ecosystems: Interactions, Energy, and Dynamics (LS2)

#### 5.LS2.2 Use models to explain or predict factors that upset the stability of local ecosystems.

**Clarification Statement:** Explanatory models can include representations of relationships between and among organisms, or simulations can be used to predict how factors might impact an ecosystem. Factors that upset an ecosystem's stability include invasive species, drought, human development, and removal of predators. **Assessment Boundary:** Assessment does not include molecular explanations.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop a model to describe or predict phenomena.</li></ul>	<b>Interdependent Relationships in Ecosystems</b> <ul style="list-style-type: none"><li>Organisms can survive only in environments in which their particular needs are met.</li><li>A healthy ecosystem is one in which multiple species of different types are each able to meet their needs in a relatively stable web of life.</li><li>Newly introduced species can damage the balance of an ecosystem.</li></ul>	<b>System and System Models</b> <ul style="list-style-type: none"><li>A system can be described in terms of its components and their interactions.</li></ul>

### Earth's Place in the Universe (ESS1)

#### 5.ESS1.1 Support an argument with evidence that differences in the apparent brightness of the Sun compared to other stars is due to their relative distances from Earth.

**Clarification Statement:** Examples of scale could include relative distance of specific stars to Earth. Evidence to support arguments could come from data or models. Examples of stars could include Polaris, Sirius, and Betelgeuse. **Assessment Boundary:** Assessment is limited to relative distances, not size of stars. Assessment does not include other factors that affect apparent brightness (such as stellar masses, age, stage).

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"><li>Support an argument with evidence, data, or a model.</li></ul>	<b>The Universe and Its Stars</b> <ul style="list-style-type: none"><li>The Sun is a star that appears brighter than other stars because it is closer to Earth.</li><li>The Sun is a star that appears larger than other stars because it is closer to Earth.</li><li>Stars range greatly in their distance from Earth.</li></ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"><li>Natural objects exist from the very small to the immensely large.</li></ul>

Earth's Place in the Universe (ESS1)

**5.ESS1.2 Represent data in graphical displays to reveal patterns of daily changes in the length and direction of shadows, in addition to different positions of the Sun, Moon, and stars at different times of the day, month, and year.**

**Clarification Statement:** Examples of patterns could include the position and motion of Earth with respect to the Sun, selected stars that are visible only in particular months, or the position of the Moon with respect to the Sun and Earth. **Assessment Boundary:** Assessment does not include causes of seasons or labeling specific phases of the Moon.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts

## Oklahoma Academic Standards for Science Grade 5

### Earth's Systems (ESS2)

**5.ESS2.2 Describe and graph amounts of saltwater and freshwater in various reservoirs to provide evidence about the distribution of water on Earth.**

**Clarification Statement:** Descriptions could include comparisons using graphs, charts, and tables. Quantities could include percentages, total volume, and amounts. Emphasis is on using amount or percentages of water to make comparisons. No attempt to calculate percentages should be made. **Assessment Boundary:** Assessment is limited to oceans, lakes, rivers, glaciers, groundwater, and polar ice caps, and does not include the atmosphere. Only a tiny fraction is in streams, lakes, wetlands, and the atmosphere. Assessment should not include circle charts (pie charts) or calculation of percentages.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"><li>Describe and graph quantities such as area and volume to address scientific questions.</li></ul>	<b>The Roles of Water in Earth's Surface Processes</b> <ul style="list-style-type: none"><li>Nearly all of Earth's available water is in the ocean.</li><li>Most freshwater is in glaciers or underground; only a tiny fraction is in streams, lakes, wetlands, and the atmosphere.</li></ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"><li>Standard units are used to measure and describe physical quantities such as weight and volume.</li></ul>

### Earth and Human Activity (ESS3)

**5.ESS3.1 Obtain and combine information about ways individual communities use science ideas to protect the Earth's resources and environments.**

**Clarification Statement:** Examples of information might include the use of natural fertilizers or biological pest control by farmers, replanting trees after cutting them by the logging industry, and the institution of recycling programs in cities. **Assessment Boundary:** Assessment is limited to one human interaction at a time.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"><li>Obtain and combine information from books and/or other reliable media to explain phenomena or solutions to a design problem.</li></ul>	<b>Human Impacts on Earth Systems</b> <ul style="list-style-type: none"><li>Human activities in agriculture, industry, and everyday life have had major effects on the land, vegetation, streams, ocean, air, and even outer space. But individuals and communities are doing things to help protect Earth's resources and environments.</li></ul>	<b>System and System Models</b> <ul style="list-style-type: none"><li>A system can be described in terms of its components and their interactions.</li></ul>

GRADE 6 (6)		
Matter and Its Interactions (PS1)		
<b>6.PS1.4 Develop a model that predicts and describes changes in particle motion, temperature, and state of a pure substance when thermal energy is added or removed.</b>		
<b>Clarification Statement:</b> Emphasis is on qualitative molecular-level models of solids, liquids, and gases to show that adding or removing thermal energy increases or decreases kinetic energy of the particles until a change of state occurs. Examples of models could include drawings and diagrams. Examples of particles could include molecules or inert atoms. Examples of pure substances could include water, carbon dioxide, and helium. <b>Assessment Boundary:</b> The use of mathematical formulas is not intended.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"> <li>Develop a model to predict and/or describe phenomena.</li> </ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"> <li>Gases and liquids are made of molecules or inert atoms that are moving about relative to each other. In a liquid, the molecules are constantly in contact with others; in a gas, they are widely spaced except when they happen to collide. In a solid, atoms are closely spaced and may vibrate in position but do not change relative locations.</li> <li>The changes of state that occur with variations in temperature or pressure can be described and predicted using these models of matter.</li> </ul> <b>Definitions of Energy</b> <ul style="list-style-type: none"> <li>The term “heat,” as used in everyday language, refers both to thermal energy (the motion of atoms or molecules within a substance) and the transfer of that thermal energy from one object to another. In science, heat is used only for this second meaning; it refers to the energy transferred due to the temperature difference between two objects.</li> <li>The temperature of a system is proportional to the average internal kinetic energy and potential energy per atom or molecule (whichever is the appropriate building block for the system’s material). The details of that relationship depend on the type of atom or molecule and the interactions among the atoms in the material.</li> <li>Temperature is not a direct measure of a system’s total thermal energy. The total thermal energy (sometimes called the total internal energy) of a system depends jointly on the temperature, the total number of atoms in the system, and the state of the material.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Cause and effect relationships are routinely identified, tested, and used to explain change.</li> </ul>

Energy (PS3)		
<b>6.PS3.3 Apply scientific principles to design, construct, and test a device that either minimizes or maximizes thermal energy transfer.*</b>		
<p><b>Clarification Statement:</b> Examples of devices could include an insulated box, a solar cooker, and a Styrofoam cup. Care should be taken with devices that concentrate significant amounts of energy (e.g., conduction, convection, and/or radiation). <b>Assessment Boundary:</b> Assessment does not include calculating the total amount of thermal energy.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Designing Solutions</b></p> <ul style="list-style-type: none"> <li>Apply scientific ideas or principles to design, construct, and test a design of an object, tool, process, or system.</li> </ul>	<p><b>Definitions of Energy</b></p> <ul style="list-style-type: none"> <li>Temperature is a measure of the average kinetic energy of particles of matter.</li> <li>The relationship between the temperature and the total energy of a system depends on the types, states, and amounts of matter present.</li> </ul> <p><b>Conservation of Energy and Energy Transfer</b></p> <ul style="list-style-type: none"> <li>Energy is spontaneously transferred out of hotter regions or objects and into colder ones.</li> </ul> <p><b>Defining and Delimiting an Engineering Problem</b></p> <ul style="list-style-type: none"> <li>The more precisely a design task's criteria and constraints can be defined, the more likely it is that the designed solution will be successful.</li> <li>Specification of constraints includes consideration of scientific principles and other relevant knowledge that is likely to limit possible solutions.</li> </ul> <p><b>Developing Possible Solutions</b></p> <ul style="list-style-type: none"> <li>A solution needs to be tested, and then modified on the basis of the test results in order to improve it.</li> <li>There are systematic processes for evaluating solutions with respect to how well they meet the criteria and constraints of a problem.</li> </ul>	<p><b>Energy and Matter</b></p> <ul style="list-style-type: none"> <li>The transfer of energy can be tracked as energy flows through a designed or natural system.</li> </ul>

Energy (PS3)		
<b>6.PS3.4 Plan an investigation to determine the relationships among the energy transferred, the type of matter, the mass, and the change in the average kinetic energy of the particles as measured by the temperature of the sample.</b>		
<b>Clarification Statement:</b> Examples of experiments could include comparing final water temperatures after different masses of ice melted in the same volume of water with the same initial temperature, the temperature change of samples of different materials with the same mass as they cool or heat in the environment, or the same material with different masses when a specific amount of energy is added. <b>Assessment Boundary:</b> Assessment does not include calculating the total amount of thermal energy transferred.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"> <li>Plan an investigation individually and collaboratively, and in the design, identify independent and dependent variables and controls, what tools are needed to do the gathering, how measurements will be recorded, and how much data is needed to support a claim.</li> </ul>	<b>Definitions of Energy</b> <ul style="list-style-type: none"> <li>Temperature is a measure of the average kinetic energy of particles of matter.</li> <li>The relationship between the temperature and the total energy of a system depends on the types, states, and amounts of matter present.</li> </ul> <b>Conservation of Energy and Energy Transfer</b> <ul style="list-style-type: none"> <li>The amount of energy transfer needed to change the temperature of a matter sample by a given amount depends on the nature of the matter, the size of the sample, and the environment.</li> </ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"> <li>Proportional relationships (e.g., speed as the ratio of distance traveled to time taken) among different types of quantities provide information about the magnitude of properties and processes.</li> </ul>
Connections to Scientific Literacy		
<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"> <li>Science knowledge is based upon logical and conceptual connections between evidence and explanations.</li> </ul>		

**Waves and Their Applications in Technologies for Information Transfer (PS4)**

**6.PS4.2 Develop and use a model to describe that waves are reflected, absorbed, or transmitted through various materials.**

**Clarification Statement:** Emphasis is on both light and mechanical waves. Examples of models could include drawings, simulations, and written descriptions of light waves through a prism, mechanical waves through gases vs. liquids vs. solids, or sound waves through different mediums.

**Assessment Boundary:** Assessment is limited to qualitative applications pertaining to electromagnetic and mechanical waves.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop and use a model to describe phenomena.</li></ul>	<b>Wave Properties</b> <ul style="list-style-type: none"><li>A sound wave needs a medium through which it is transmitted.</li></ul> <b>Electromagnetic Radiation</b> <ul style="list-style-type: none"><li>When light shines on an object, it is reflected, absorbed, or transmitted through the object, depending on the object's material and the frequency (color) of the light.</li><li>The path that light can travel can be traced as straight lines, except at surfaces between different transparent materials (e.g., air and water, air, and glass) where the light path bends.</li><li>A wave model of light is useful for explaining brightness, color, and the frequency-dependent bending of light at a surface between media. However, because light can travel through space, it cannot be a matter wave, like sound or water waves.</li></ul>	<b>Structure and Function</b> <ul style="list-style-type: none"><li>Structures can be designed to serve particular functions by taking into account properties of different materials and how materials can be shaped and used.</li></ul>

From Molecules to Organisms: Structure and Processes (LS1)		
<b>6.LS1.1 Conduct an investigation to provide evidence that living things are made of cells, either one cell or many different numbers and types of cells.</b>		
<b>Clarification Statement:</b> Emphasis is on developing evidence that living things are made of cells, distinguishing between living and non-living things, and understanding that living things may be made of one cell or many varied cells. <b>Assessment Boundary:</b> Assessment does not include identification of specific cell types and should emphasize the use of evidence from investigations.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"> <li>Conduct an investigation to produce data to serve as the basis for evidence that meets the goals of an investigation.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>All living things are made up of cells, which is the smallest unit that can be said to be alive.</li> <li>An organism may consist of one single cell (unicellular) or many different numbers and types of cells (multicellular).</li> </ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"> <li>Phenomena that can be observed at one scale may not be observable at another scale.</li> </ul>
<b>6.LS1.2 Develop and use a model to describe the function of a cell as a whole and ways parts of cells contribute to the function.</b>		
<b>Clarification Statement:</b> Emphasis is on the cell functioning as a whole system and the primary role of identified parts of the cell, specifically the nucleus, chloroplasts, mitochondria, cell membrane, and cell wall. Other organelles can be introduced while covering this concept. <b>Assessment Boundary:</b> Assessment of organelle structure/function relationships is limited to the cell wall and cell membrane. Assessment of other organelles is limited to their relationship to the whole cell. Assessment does not include biochemical functions of cells or cell parts.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"> <li>Develop and use a model to describe phenomena.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>Within cells, special structures are responsible for particular functions, and the cell membrane forms the boundary that controls what enters and leaves the cell.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>Complex and microscopic structures and systems can be visualized, modeled, and used to describe how their function depends on the relationships among its parts.</li> </ul>

From Molecules to Organisms: Structure and Processes (LS1)		
<b>6.LS1.3 Use an argument supported by evidence for how the body is a system of interacting subsystems composed of groups of cells.</b>		
<p><b>Clarification Statement:</b> Emphasis is on the conceptual understanding that cells form tissues and tissues form organs specialized for particular body functions. Examples could include the interaction of subsystems within a system and the normal functioning of those systems. <b>Assessment Boundary:</b> Assessment does not include the mechanism of one body system independent of others. Assessment is limited to the circulatory, excretory, digestive, respiratory, muscular, and nervous systems.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Engaging in Argument from Evidence</b></p> <ul style="list-style-type: none"> <li>Use an oral and written argument supported by evidence to support or refute an explanation or a model for a phenomenon.</li> </ul>	<p><b>Structure and Function</b></p> <ul style="list-style-type: none"> <li>In multicellular organisms, the body is a system of multiple interacting subsystems. These subsystems are groups of cells that work together to form tissues and organs that are specialized for particular body functions.</li> </ul>	<p><b>Systems and System Models</b></p> <ul style="list-style-type: none"> <li>Systems may interact with other systems; they may have subsystems and be a part of larger complex systems.</li> </ul>
Connections to Scientific Literacy		
<p><b>Science is a Human Endeavor</b></p> <ul style="list-style-type: none"> <li>Scientists and engineers are guided by habits of mind such as intellectual honesty, tolerance of ambiguity, skepticism, and openness to new ideas.</li> </ul>		

From Molecules to Organisms: Structure and Processes (LS1)

**6.LS1.8 Gather and synthesize information that sensory receptors respond to stimuli by sending messages to the brain for immediate behavior or storage as memories.**

**Clarification Statement:** Examples include receptors in the eye that respond to light intensity and color; receptors in hair cells of the inner ear that detect vibrations conducted from the eardrum; taste buds that detect chemical qualities of foods including sweetness, bitterness, sourness, saltiness, and umami (savory taste); and receptors in the skin that respond to variations in pressure. **Assessment Boundary:** The assessment should provide evidence of students' abilities to provide a basic and conceptual explanation of the process. Assessment does not include mechanisms for the transmission of this information.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"><li>Read and comprehend grade appropriate complex texts and/or other reliable media to summarize and obtain scientific and technical ideas.</li></ul>	<b>Information Processing</b> <ul style="list-style-type: none"><li>Each sense receptor responds to different inputs (electromagnetic, mechanical, chemical), transmitting them as signals that travel along nerve cells to the brain. The signals are then processed in the brain, resulting in immediate behaviors or memories.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships may be used to predict phenomena in natural systems.</li></ul>

Earth's Place in the Universe (ESS1)

**6.ESS1.4 Construct a scientific explanation based on evidence from rock strata for how the geologic time scale is used to organize Earth's geologic history.**

**Clarification Statement:** Emphasis is on analyses of rock formations, and the fossils they contain, to establish relative ages of major events in Earth's history. Scientific explanations can include models to study the geologic time scale. **Assessment Boundary:** Assessment does not include recalling the names of specific periods or epochs, or the events within them.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past, and will continue to do so in the future.</li></ul>	<b>The History of Planet Earth</b> <ul style="list-style-type: none"><li>The geologic time scale interpreted from rock strata provides a way to organize Earth's history.</li><li>Analyses of rock strata and the fossil record provide only relative dates, not an absolute scale.</li><li>Major events could include the formation of mountain chains and ocean basins, adaptation and extinction of particular living organisms, volcanic activities, periods of massive glaciation, and the development of watersheds and rivers through glaciation and water erosion.</li></ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"><li>Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.</li></ul>

Earth's Systems (ESS2)		
<b>6.ESS2.1 Develop and revise a model to describe the cycling of Earth's materials and the flow of energy that drives these processes within and among Earth's systems.</b>		
<b>Clarification Statement:</b> Emphasis is on how energy from the Sun and Earth's hot interior drives processes that cause physical and chemical changes to materials within and between the geosphere, hydrosphere, atmosphere, and biosphere. Examples of processes could include melting, crystallization, weathering, deformation, and sedimentation, which act together to form and change rocks and minerals through the rock cycle. <b>Assessment Boundary:</b> Assessment does not include the identification or naming of minerals.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop and/or revise a model to show the relationships among variables.</li></ul>	<b>Earth's Materials and Systems</b> <ul style="list-style-type: none"><li>All Earth processes result from energy flowing and matter cycling within and among the planet's systems. This energy is derived from the Sun and Earth's hot interior. The energy that flows and matter that cycles produces chemical and physical changes in Earth's materials.</li></ul>	<b>Stability and Change</b> <ul style="list-style-type: none"><li>Explanations of stability and change in natural or designed systems can be constructed by examining the changes over time and forces at different scales, including the atomic scale.</li></ul>

Earth's Systems (ESS2)		
<b>6.ESS2.2 Construct an explanation based on evidence for how geoscience processes have changed Earth's surface at varying time and spatial scales.</b>		
<b>Clarification Statement:</b> Emphasis is on how processes change Earth's surface at time and spatial scales that can be large (such as slow plate motions or the uplift of large mountain ranges) or small (such as rapid landslides or microscopic geochemical reactions), and how many geoscience processes usually behave gradually but are punctuated by catastrophic events (such as earthquakes, volcanoes, and meteor impacts). Examples of geoscience processes could include surface weathering and deposition by the movements of water, ice, and wind. Emphasis is on geoscience processes that shape local geographic features, where appropriate. <b>Assessment Boundary:</b> Assessment does not include identification or naming of specific events.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.</li></ul>	<b>Earth's Materials and Systems</b> <ul style="list-style-type: none"><li>The planet's systems interact over scales that range from microscopic to global in size; these interactions have shaped Earth's history and will determine its future.</li></ul> <b>The Roles of Water in Earth's Surface Processes</b> <ul style="list-style-type: none"><li>Water's movements, both on the land and underground, cause weathering and erosion, which change the land's surface features and create underground formations.</li></ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"><li>Time, space, and energy phenomena can be observed at various scales, using models to study systems that are too large or too small.</li></ul>

Earth's Systems (ESS2)		
<b>6.ESS2.3 Analyze and interpret data on the patterns of distribution of fossils and rocks, continental shapes, and seafloor structures to provide evidence of past plate motions.</b>		
<b>Clarification Statement:</b> Examples could include identifying patterns on maps of earthquakes and volcanoes relative to plate boundaries, the shapes of the continents, the locations of ocean structures (including mountains, volcanoes, faults, and trenches), or similarities of rock and fossil types on different continents. <b>Assessment Boundary:</b> Paleomagnetic anomalies in oceanic and continental crust are not assessed.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyze and Interpret Data</b> <ul style="list-style-type: none"><li>Analyze and interpret data to determine similarities and differences in findings.</li></ul>	<b>The History of Planet Earth</b> <ul style="list-style-type: none"><li>Tectonic processes continually generate new ocean sea floor at ridges and destroy old seafloor at trenches.</li></ul> <b>Plate Tectonics and Large-Scale System Interactions</b> <ul style="list-style-type: none"><li>Maps of ancient land and water patterns, based on investigations of rocks and fossils, make clear how Earth's plates have moved great distances, collided, and spread apart.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Patterns in rate of change and other numerical relationships can provide information about natural and human-designed systems.</li></ul>

<b>Scientific Knowledge is Open to Revision in Light of New Evidence</b> <ul style="list-style-type: none"><li>Science findings are frequently revised and/or reinterpreted based on new evidence.</li></ul>		

Earth's Systems (ESS2)		
<b>6.ESS2.4 Develop a model to describe the cycling of water through Earth's systems driven by energy from the Sun and the force of gravity.</b>		
<b>Clarification Statement:</b> Emphasis is on the ways water changes its state as it moves through the multiple pathways of the hydrologic cycle. Examples of models can be conceptual or physical. <b>Assessment Boundary:</b> A quantitative understanding of the latent heats of vaporization and fusion is not assessed.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop a model to describe unobservable mechanisms.</li></ul>	<b>The Roles of Water in Earth's Surface Processes</b> <ul style="list-style-type: none"><li>Water continually cycles among land, ocean, and atmosphere via transpiration, evaporation, condensation, crystallization, and precipitation, as well as downhill flows on land.</li><li>Global movements of water and its changes in form are propelled by sunlight and gravity.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Within a natural or designed system, the transfer of energy drives the motion and/or cycling of matter.</li></ul>

Earth's Systems (ESS2)		
<b>6.ESS2.5 Collect data to provide evidence for how the motions and complex interactions of air masses result in changes in weather conditions.</b>		
<p><b>Clarification Statement:</b> Emphasis is on how air masses flow from regions of high pressure to low pressure, causing weather (defined by temperature, pressure, humidity, precipitation, and wind) at a fixed location to change over time, and how sudden changes in weather can result when different air masses interact. Emphasis is on how weather can be predicted within probabilistic ranges. Examples of data can be provided to students (such as weather maps, diagrams, and visualizations) or obtained through laboratory experiments (such as with condensation).</p> <p><b>Assessment Boundary:</b> Assessment does not include recalling the names of cloud types or weather symbols used on weather maps or the reported diagrams from weather stations.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Planning and Carrying Out Investigations</b></p> <ul style="list-style-type: none"><li>Collect data to serve as the basis for evidence to answer scientific questions or test design solutions under a range of conditions.</li></ul>	<p><b>The Roles of Water in Earth's Surface Processes</b></p> <ul style="list-style-type: none"><li>Weather and climate are influenced by interactions involving sunlight, the ocean, the atmosphere, ice, landforms, and living things.</li><li>These interactions vary with latitude, altitude, and local and regional geography, all of which can affect oceanic and atmospheric flow patterns.</li></ul> <p><b>Weather and Climate</b></p> <ul style="list-style-type: none"><li>Because these patterns are so complex, weather can be predicted only probabilistically.</li></ul>	<p><b>Cause and Effect</b></p> <ul style="list-style-type: none"><li>Cause and effect relationships may be used to predict phenomena in natural or designed systems.</li></ul>

Earth's Systems (ESS2)

**6.ESS2.6 Develop or modify a model to describe how unequal heating and rotation of the Earth causes patterns of atmospheric and oceanic circulation that determine regional climates.**

**Clarification Statement:** Emphasis is on how patterns vary by latitude, altitude, and geographic land distribution. Emphasis of atmospheric circulation is on the sunlight-driven latitudinal banding, the Coriolis effect, and resulting prevailing winds; emphasis of ocean circulation (e.g., Gulf Stream, North Pacific Drift, California Current) is on the transfer of heat by the global ocean convection cycle, which is constrained by the Coriolis effect and the outlines of continents. Interactions between the atmosphere and oceans can affect the ocean's surface temperature (El Nino/La Nina). Examples of models could include diagrams, maps, globes, or digital representations. **Assessment Boundary:** Assessment should not be focused on specific weather events, but on the patterns that drive Earth's climate systems.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop or modify a model based on evidence to match what happens if a variable or component of a system is changed.</li></ul>	<b>The Roles of Water in Earth's Surface Processes</b> <ul style="list-style-type: none"><li>Variations in density due to variations in temperature and salinity drive a global pattern of interconnected ocean currents.</li></ul> <b>Weather and Climate</b> <ul style="list-style-type: none"><li>Weather and climate are influenced by interactions involving sunlight, the ocean, the atmosphere, ice, landforms, and living things.</li><li>These interactions vary with latitude, altitude, and local and regional geography, all of which can affect oceanic and atmospheric flow patterns.</li><li>The ocean exerts a major influence on weather and climate by absorbing energy from the Sun and globally redistributing it through ocean currents.</li></ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"><li>Models can be used to represent systems and their interactions (such as inputs, processes, and outputs) and energy, matter, and information flows within the systems.</li></ul>

Earth and Human Activity (ESS3)

**6.ESS3.2 Analyze and interpret data on natural hazards to forecast future catastrophic events and inform the development of technologies to mitigate their effects.**

**Clarification Statement:** Emphasis is on how some natural hazards, such as volcanic eruptions and severe weather, are preceded by phenomena that allow for reliable predictions, but others, such as earthquakes, occur suddenly, with no notice, and thus are not yet predictable. Examples of natural hazards could be taken from interior processes (e.g., earthquakes and volcanic eruptions), surface processes (e.g., mass wasting and tsunamis), or severe weather events (e.g., hurricanes, tornadoes, and floods). Examples of data could include the locations, magnitudes, and frequencies of the natural hazards. Examples of technologies could be global (e.g., satellite systems to monitor hurricanes or forest fires) or local (e.g., building shelters in tornado-prone regions or reservoirs to mitigate droughts). **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"><li>Analyze and interpret data to provide evidence for phenomena.</li></ul>	<b>Natural Hazards</b> <ul style="list-style-type: none"><li>Mapping the history of natural hazards in a region, combined with an understanding of related geologic forces, can help forecast the locations and likelihoods of future events.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Graphs, charts, and images can be used to identify patterns in data.</li></ul>

GRADE 7 (7)		
Matter and Its Interaction (PS1)		
7.PS1.1 Develop and use models to describe the atomic composition of simple molecules and extended structures.		
<p><b>Clarification Statement:</b> Emphasis is on developing models of molecules that vary in complexity. Examples of simple molecules could include ammonia and/or methanol. Examples of extended structures could include sodium chloride or diamonds. Examples of molecular-level models could include drawings, 3D ball and stick structures, or computer representations showing different molecules with different types of atoms. <b>Assessment Boundary:</b> Assessment does not include the subatomic structure of an atom, valence electrons, and bonding energy, discussing the ionic nature of subunits of complex structures, or a complete depiction of all individual atoms in a complex molecule or extended structure.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Developing and Using Models</b></p> <ul style="list-style-type: none"><li>Develop and use a model to describe unobservable mechanisms.</li></ul>	<p><b>Structure and Properties of Matter</b></p> <ul style="list-style-type: none"><li>Substances are made from different types of atoms, which combine with one another in various ways.</li><li>Atoms form molecules that range in size from two to thousands of atoms.</li><li>Solids may be formed from molecules, or they may be extended structures with repeating subunits (e.g., crystals).</li></ul>	<p><b>Scale, Proportion, and Quantity</b></p> <ul style="list-style-type: none"><li>Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.</li></ul>

Matter and Its Interaction (PS1)		
<b>7.PS1.2 Analyze and interpret patterns of data related to the properties of substances before and after the substances interact to determine if a chemical reaction has occurred.</b>		
<b>Clarification Statement:</b> Analyze characteristics of chemical and physical properties of pure substances. Examples of chemical reactions could include burning sugar or steel wool, baking a cake, milk curdling, or metal rusting. <b>Assessment Boundary:</b> Assessment is limited to analysis of the following properties: color change, formation of a gas, temperature change, density, melting point, boiling point, solubility, flammability, and odor.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"><li>Analyze and interpret data to determine similarities and differences in findings.</li></ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"><li>Each pure substance has characteristic physical and chemical properties (for any bulk quantity under given conditions) that can be used to identify it.</li></ul> <b>Chemical Reactions</b> <ul style="list-style-type: none"><li>Substances react chemically in characteristic ways. In a chemical process, the atoms that make up the original substances are regrouped into different molecules, and these new substances have different properties from those of the reactants.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Macroscopic patterns are related to the nature of microscopic and atomic-level structures.</li></ul>
Connections to Scientific Literacy		
<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"><li>Science knowledge is based upon logical and conceptual connections between evidence and explanations.</li></ul>		

**Matter and Its Interaction (PS1)**

**7.PS1.3 Gather and make sense of information to describe that synthetic materials come from natural resources and impact society.\***

**Clarification Statement:** Emphasis is on natural resources that undergo a chemical process to form the synthetic material. Examples of new materials could include new medicine, foods, and alternative fuels. **Assessment Boundary:** Assessment does not include an understanding of the electrical forces within and between atoms or the substructure of an atom.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"> <li>Gather, read, synthesize information from multiple appropriate sources, and assess the credibility, accuracy, and possible bias of each publication and methods used, and describe how they are supported or not supported by evidence.</li> </ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"> <li>Each pure substance has characteristics, physical and chemical properties (for any bulk quantity under given conditions) that can be used to identify it.</li> </ul> <b>Chemical Reactions</b> <ul style="list-style-type: none"> <li>Substances react chemically in characteristic ways.</li> <li>In a chemical process, the atoms that make up the original substances regroup into different molecules, and these new substances have different properties from those of the reactants.</li> </ul> <b>Interdependence of Science, Engineering, and Technology</b> <ul style="list-style-type: none"> <li>Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.</li> </ul> <b>Influence of Science, Engineering and Technology on Society and the Natural World</b> <ul style="list-style-type: none"> <li>The uses of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>Structures can be designed to serve particular functions by taking into account properties of different materials and how materials can be shaped and used.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

## Oklahoma Academic Standards for Science Grade 7

### Matter and Its Interaction (PS1)

**7.PS1.5** Develop and use a model to describe how the total number of atoms does not change in a chemical reaction and thus mass is conserved.

**Clarification Statement:** Emphasis is on the law of conservation of matter and on physical models or drawings, including digital forms, that represent atoms. **Assessment Boundary:** Assessment does not include the subatomic structure of an atom, the use of atomic masses, or intermolecular forces.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop a model to describe unobservable mechanics.</li></ul>	<b>Chemical Reactions</b> <ul style="list-style-type: none"><li>Substances react chemically in characteristic ways.</li><li>In a chemical process, the atoms that make up the original substances are regrouped into different molecules, and these new substances have different properties from those of the reactants.</li><li>The total number of each type of atom is conserved; thus, the mass does not change.</li></ul> <b>Science Models, Laws, and Theories Explain Natural Phenomena</b> <ul style="list-style-type: none"><li>Laws are regularities or mathematical descriptions of natural phenomena.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Matter is conserved because atoms are conserved in physical and chemical processes.</li></ul>

Matter and Its Interaction (PS1)

**7.PS1.6 Construct, test, and modify a device that releases or absorbs thermal energy by chemical processes to solve a problem.\***

**Clarification Statement:** Examples of device modification could include changing factors such as type and concentration of a substance. Examples of problems could be keeping a chemical ice pack cold longer or chemical heat pack warm longer. Emphasis is on the design, controlling the transfer of energy to the environment, and modification of a device using factors such as type and concentration of a substance. Examples of designs could involve chemical reactions such as dissolving ammonium chloride or calcium chloride. **Assessment Boundary:** Assessment is limited to the criteria of amount, time, and temperature of substances in testing the device.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Designing Solutions</b> <ul style="list-style-type: none"> <li>Undertake a design project engaging in the design cycle, to construct and/or implement a solution that meets specific design criteria and constraints.</li> </ul>	<b>Chemical Reactions</b> <ul style="list-style-type: none"> <li>Some chemical reactions release energy; others store energy.</li> </ul> <b>Developing Possible Solutions</b> <ul style="list-style-type: none"> <li>A solution needs to be tested, and then modified on the basis of the test results, in order to improve it.</li> </ul> <b>Optimizing the Design Solution</b> <ul style="list-style-type: none"> <li>Although one design may not perform the best across all tests, identifying the characteristics of the design that performed the best in each test can provide useful information for the redesign process – that is, some of the characteristics may be incorporated into the new design.</li> <li>The iterative process of testing the most promising solutions and modifying what is proposed on the basis of the test results leads to greater refinement and, ultimately, to an optimal solution.</li> </ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"> <li>The transfer of energy can be tracked as energy flows through a designed or natural system.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

Energy (PS3)		
<b>7.PS3.1 Construct and interpret graphical displays of data to describe the proportional relationships of kinetic energy to the mass of an object and the speed of an object.</b>		
<b>Clarification Statement:</b> Emphasis is on descriptive relationships between kinetic energy and mass separately from kinetic energy and speed. Examples could include riding a bicycle at different speeds, rolling different sizes of rocks downhill, and getting hit by a wiffle ball versus a tennis ball. <b>Assessment Boundary:</b> Does not include mathematical calculations of kinetic energy.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyze and Interpret Data</b> <ul style="list-style-type: none"><li>Construct and interpret graphical displays of data to identify linear and nonlinear relationships.</li></ul>	<b>Definitions of Energy</b> <ul style="list-style-type: none"><li>Motion energy is properly called kinetic energy; it is proportional to the mass of the moving object and grows with the square of its speed.</li></ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"><li>Proportional relationships (e.g., speed as a ratio of distance traveled to time taken) among different types of quantities provide information about the magnitude of properties and processes.</li></ul>

Energy (PS3)		
<b>7.PS3.2 Develop or modify a model to describe that when objects interacting at a distance change their arrangement, different amounts of potential energy are stored in the system.</b>		
<b>Clarification Statement:</b> Emphasis is on relative amounts of potential energy, not on calculations of potential energy. Examples of objects within systems interacting at varying distances could include the Earth and either a roller coaster cart at varying positions on a hill or objects at varying heights on shelves, changing the direction/orientation of a magnet, and a balloon with static electrical charge being brought closer to a classmate's hair. Examples of models could include representations, diagrams, pictures, and written descriptions of systems. <b>Assessment Boundary:</b> Assessment is limited to two objects and electric, magnetic, and gravitational interactions.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop or modify a model based on evidence to match what happens if a variable or component of a system is changed.</li></ul>	<b>Definitions of Energy</b> <ul style="list-style-type: none"><li>A system of objects may also contain stored (potential) energy, depending on their relative positions.</li></ul> <b>Relationship Between Energy and Forces</b> <ul style="list-style-type: none"><li>When two objects interact, each one exerts a force on the other that can cause energy to be transferred to or from the object.</li></ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"><li>Models can be used to represent systems and their interactions (such as inputs, processes, and outputs) and energy and matter flows within systems.</li></ul>

Energy (PS3)		
<b>7.PS3.5 Construct, use, and present arguments to support the claim that when the kinetic energy of an object changes, energy is transferred to or from the object.</b>		
<b>Clarification Statement:</b> Examples of empirical evidence used in arguments could include an inventory or other representation of the energy before and after the transfer in the form of temperature changes or motion of the object. <b>Assessment Boundary:</b> Assessment does not include calculations of energy.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"><li>Construct, use, and present oral and written arguments supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon.</li></ul>	<b>Conservation of Energy and Energy Transfer</b> <ul style="list-style-type: none"><li>When the motion energy of an object changes, there is inevitably some other change in energy at the same time.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>The transfer of energy can be tracked as energy flows through a designed or natural system.</li></ul>
Connections to Scientific Literacy		
<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"><li>Science knowledge is based upon logical and conceptual connections between evidence and explanations.</li></ul>		

From Molecules to Organisms: Structure and Function (LS1)		
<b>7.LS1.6 Construct a scientific explanation based on evidence for the role of photosynthesis in the cycling of matter and flow of energy into and out of organisms.</b>		
<b>Clarification Statement:</b> Emphasis is on tracing movement of matter and flow of energy. <b>Assessment Boundary:</b> Assessment does not include balancing of chemical equations or the biochemical mechanisms of photosynthesis.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"> <li>Construct a scientific explanation based on valid and reliable evidence obtained from sources (including the students' own experiments) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.</li> </ul>	<b>Organization for Matter and Energy Flow in Organisms</b> <ul style="list-style-type: none"> <li>Plants, algae (including phytoplankton), and many microorganisms use the energy from light to make sugars (food) from carbon dioxide from the atmosphere and water through the process of photosynthesis, which also releases oxygen. These sugars can be used immediately or stored for growth or later use.</li> </ul> <b>Energy in Chemical Processes and Everyday Life</b> <ul style="list-style-type: none"> <li>The chemical reaction by which plants produce complex food molecules (sugars) requires an energy input (i.e., from sunlight) to occur.</li> <li>In this reaction, carbon dioxide and water combine to form carbon-based organic molecules and release oxygen.</li> </ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"> <li>Within a natural system, the transfer of energy drives the motion and/or cycling of matter.</li> </ul>
Connections to Scientific Literacy		
<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"> <li>Science knowledge is based upon logical connections between evidence and explanations.</li> </ul>		

From Molecules to Organisms: Structure and Function (LS1)

**7.LS1.7 Develop a model to describe how food molecules in plants and animals are broken down and rearranged through chemical reactions to form new molecules that support growth and/or release of energy as matter moves through an organism.**

**Clarification Statement:** Emphasis is on describing how energy stored within food molecules is released as they are broken apart and rearranged into new molecules. **Assessment Boundary:** Assessment does not include balancing chemical equations or the biochemical mechanisms of photosynthesis or respiration.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop and/or revise a model to show the relationships among variables, including those that are not observable but predict observable phenomena.</li></ul>	<b>Organization for Matter and Energy Flow in Organisms</b> <ul style="list-style-type: none"><li>Within an individual organism, food moves through a series of chemical reactions in which it is broken down and rearranged to form new molecules, support growth, or release energy.</li></ul> <b>Energy in Chemical Processes and Everyday Life</b> <ul style="list-style-type: none"><li>Cellular respiration in plants and animals involves chemical reactions with oxygen that release stored energy. In these processes, complex molecules containing carbon react with oxygen to produce carbon dioxide and other materials.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Matter is conserved because atoms are conserved in physical and chemical processes.</li></ul>

**Ecosystems: Interactions, Energy, and Dynamics (LS2)**

**7.LS2.1 Analyze and interpret data to provide evidence for the effects of resource availability on organisms and populations of organisms in an ecosystem.**

**Clarification Statement:** Emphasis is on cause and effect relationships between resources and growth of individual organisms and the numbers of organisms in ecosystems during periods of abundant and scarce resources. **Assessment Boundary:** Determining the carrying capacity of ecosystems is beyond the intent.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"><li>Analyze and interpret data to provide evidence for phenomena.</li></ul>	<b>Interdependent Relationships in Ecosystems</b> <ul style="list-style-type: none"><li>Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with nonliving factors.</li><li>In any ecosystem, organisms and populations with similar requirements for food, water, oxygen, or other resources may compete with each other for limited resources, access to which consequently constrains their growth and reproduction.</li><li>Growth of organisms and population increases are limited by access to resources.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships may be used to predict phenomena in natural or designed systems.</li></ul>

**Ecosystems: Interactions, Energy, and Dynamics (LS2)**

**7.LS2.2 Construct an explanation that predicts patterns of interactions among organisms across multiple ecosystems.**

**Clarification Statement:** Emphasis is on constructing explanations that predict consistent patterns of interactions in different ecosystems in terms of the relationships among and between living organisms and nonliving components of ecosystems. Examples of types of interactions could include competition, predation, parasitism, commensalism, and mutualism. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Construct an explanation that includes qualitative or quantitative relationships between variables that predict and/or describe phenomena.</li></ul>	<b>Interdependent Relationships in Ecosystems</b> <ul style="list-style-type: none"><li>Predatory interactions may reduce the number of organisms or eliminate whole populations of organisms.</li><li>Mutually beneficial interactions, in contrast, may become so interdependent that each organism requires the other for survival.</li><li>Although the species involved in these competitive, predatory, and mutually beneficial interactions vary across ecosystems, the patterns of interactions of organisms with their environments, both living and nonliving, are shared.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Patterns can be used to identify cause and effect relationships.</li></ul>

**Ecosystems: Interactions, Energy, and Dynamics (LS2)**

**7.LS2.3 Develop or modify a model to describe the cycling of matter and flow of energy among living and nonliving parts of an ecosystem.**

**Clarification Statement:** Emphasis is on describing the conservation of matter and flow of energy into and out of various ecosystems, and on defining the boundaries of the system. **Assessment Boundary:** Assessment does not include the use of chemical reactions to describe the processes.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop or modify a model based on evidence to match what happens if a variable or component of a system is changed.</li></ul>	<b>Cycle of Matter and Energy Transfer in Ecosystems</b> <ul style="list-style-type: none"><li>Food webs are models that demonstrate how matter and energy are transferred between producers, consumers, and decomposers as the three groups interact within an ecosystem.</li><li>Transfers of matter into and out of the physical environment occur at every level.</li><li>Decomposers recycle nutrients from dead plant or animal matter back to the soil in terrestrial environments or the water in aquatic environments.</li><li>The atoms that make up the organisms in an ecosystem are cycled repeatedly between the living and nonliving parts of the ecosystem.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>The transfer of energy can be tracked as energy flows through a natural system.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge Assumes an Order and Consistency in Natural Systems</b> <ul style="list-style-type: none"><li>Science assumes that objects and events in natural systems occur in consistent patterns that are understandable through measurement and observation.</li></ul>		

**Ecosystems: Interactions, Energy, and Dynamics (LS2)**

**7.LS2.4 Construct an argument supported by empirical evidence that changes to physical or biological components in an ecosystem affect populations.**

**Clarification Statement:** Emphasis is on recognizing patterns in data and making warranted inferences about changes in populations, and on evaluating empirical evidence supporting arguments about changes to ecosystems. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Construct an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or model for a phenomenon.</li> </ul>	<b>Ecosystem Dynamics, Functioning, and Resilience</b> <ul style="list-style-type: none"> <li>Ecosystems are dynamic in nature; their characteristics can vary over time.</li> <li>Disruptions to any physical or biological component of an ecosystem can lead to shifts in all its populations.</li> </ul>	<b>Stability and Change</b> <ul style="list-style-type: none"> <li>Small changes in one part of a system might cause large changes in another part.</li> </ul>

<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"> <li>Science disciplines share common rules for obtaining and evaluating empirical evidence.</li> </ul>		

**Ecosystems: Interactions, Energy, and Dynamics (LS2)**

**7.LS2.5 Evaluate competing design solutions for maintaining biodiversity and ecosystem services.\***

**Clarification Statement:** Examples of ecosystem services could include water purification, nutrient recycling, and prevention of soil erosion. Design solutions could be modeled digitally. Examples of design solution constraints could include scientific, economic, and social considerations.

**Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Evaluate competing design solutions based on jointly developed and agreed-upon design criteria.</li> </ul>	<b>Ecosystem Dynamics, Functioning, and Resilience</b> <ul style="list-style-type: none"> <li>Biodiversity describes the variety of species found in Earth's terrestrial and oceanic ecosystems.</li> <li>The completeness or integrity of an ecosystem's biodiversity is often used as a measure of its health.</li> </ul> <b>Biodiversity and Humans</b> <ul style="list-style-type: none"> <li>Changes in biodiversity can influence human resources, such as food, energy, and medicines, as well as ecosystem services that humans rely on—for example, water purification and recycling.</li> <li>There are systematic processes for evaluating solutions with respect to how well they meet the criteria and constraints of a problem.</li> </ul> <b>Influence of Science, Engineering, and Technology on Society and the Natural World</b> <ul style="list-style-type: none"> <li>The use of technologies and any limitations on their use are driven by individual or societal needs, desires, and values, by the findings of scientific research, and by differences in such factors as climate, natural resources, and economic conditions. Thus technology use varies from region to region and over time.</li> </ul>	<b>Stability and Change</b> <ul style="list-style-type: none"> <li>Small changes in one part of a system might cause large changes in another part.</li> </ul>

**Connections to Scientific Literacy**

**Science Addresses Questions About the Natural and Material World**

- Scientific knowledge can describe the consequences of actions but does not necessarily prescribe the decisions that society takes.

\*This standard emphasizes engineering skills or ideas.

Earth and Human Activities (ESS3)

**7.ESS3.1 Construct a scientific explanation based on evidence for how the uneven distributions of Earth’s mineral, energy, and groundwater resources are the result of past and current geoscience processes.**

**Clarification Statement:** Emphasis is on how these resources are limited and typically non-renewable, and how their distributions are significantly changing as a result of removal by humans. Examples of uneven distributions of resources as a result of past processes include but are not limited to petroleum (locations of the burial of organic marine sediments and subsequent geological traps), metal ores (locations of past volcanic and hydrothermal activity associated with subduction zones), and soil (locations of active weathering and/or deposition of rock). **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Apply scientific ideas, principles, and evidence (including students’ own investigations, models, theories, simulations, and peer review) to provide an explanation of phenomena.</li></ul>	<b>Natural Resources</b> <ul style="list-style-type: none"><li>Humans depend on Earth’s land, ocean, atmosphere, and biosphere for many different resources.</li><li>Minerals, fresh water, and biosphere resources are limited, and many are not renewable or replaceable over human lifetimes.</li><li>These resources are distributed unevenly around the planet as a result of past geologic processes.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships may be used to predict phenomena in natural or designed systems.</li></ul>

Earth and Human Activities (ESS3)

7.ESS3.3 Apply scientific principles to design a method for monitoring and minimizing human impact on the environment.\*

**Clarification Statement:** Examples of the design process include examining human environmental impacts, assessing the kinds of solutions that are feasible, and designing and evaluating solutions that could reduce that impact. Examples of human impacts can include water usage (such as the withdrawal of water from streams and aquifers or the construction of dams and levees), land usage (such as urban development, agriculture, or the removal of wetlands), and pollution (such as of the air, water, or land). **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"> <li>Apply scientific principles to design an object, tool, process, or system.</li> </ul>	<b>Human Impacts on Earth Systems</b> <ul style="list-style-type: none"> <li>Human activities have significantly altered the biosphere, sometimes damaging or destroying natural habitats and causing the extinction of other species. But changes to Earth's environments can have different impacts (negative and positive) on different living things.</li> <li>Typically, as human populations and per-capita consumption of natural resources increase, so do the negative impacts on Earth unless the activities and technologies involved are engineered otherwise.</li> </ul> <b>Influence of Science, Engineering, and Technology on Society and the Natural World</b> <ul style="list-style-type: none"> <li>The use of technologies and any limitations on their use are driven by individual or societal needs, desires, and differences in such factors as climate, natural resources, and economic conditions. ## Oklahoma Academic Standards for Science Grade 7

### Earth and Human Activities (ESS3)

**7.ESS3.4 Construct an argument supported by evidence for how increases in human population and per-capita consumption of natural resources impact Earth's systems.\***

**Clarification Statement:** Examples of evidence include grade-appropriate databases on human populations and the rates of consumption of food and natural resources (such as freshwater, mineral, and energy). Examples of impacts can include changes to the appearance, composition, and structure of Earth's systems as well as the rates at which they change. The consequences of increases in human populations and consumption of natural resources are described by science, but science does not make the decisions for the actions society takes. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Construct an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or model for a phenomenon.</li> </ul>	<b>Human Impacts on Earth Systems</b> <ul style="list-style-type: none"> <li>Typically, as human populations and per-capita consumption of natural resources increase, so do the negative impacts on Earth unless the activities and technologies involved are engineered otherwise.</li> </ul> <b>Influence of Science, Engineering, and Technology on Society and the Natural World</b> <ul style="list-style-type: none"> <li>All human activity draws on natural resources and has both short and long-term consequences, positive as well as negative, for the health of people and the natural environment.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Cause and effect relationships may be used to predict phenomena in natural or designed systems.</li> </ul>
<b>Connections to Scientific Literacy</b>		
<b>Science Addresses Questions About the Natural and Material World</b> <ul style="list-style-type: none"> <li>Scientific knowledge can describe the consequences of actions but does not necessarily prescribe the decisions that society takes.</li> </ul>		

\*This standard emphasizes engineering skills or ideas.

Earth and Human Activities (ESS3)

**7.ESS3.5 Obtain, evaluate, and communicate evidence of the factors that have caused changes in global temperatures over the past century.**

**Clarification Statement:** Examples of evidence can include tables, graphs, and maps of global and regional temperatures, atmospheric levels of gases such as carbon dioxide and methane, and the impact humans have on the environment. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Evidence</b> <ul style="list-style-type: none"><li>Gather, read, and synthesize information from multiple appropriate sources, assess the credibility, accuracy, and possible bias of each publication and method used, and describe how they are supported or not supported by evidence.</li></ul>	<b>Global Climate Change</b> <ul style="list-style-type: none"><li>Understanding atmospheric changes and reducing human vulnerability to whatever climate changes do occur depend on the understanding of climate science, engineering capabilities, and other kinds of knowledge (such as understanding of human behavior) and on applying that knowledge wisely in decisions and activities.</li></ul>	<b>Stability and Change</b> <ul style="list-style-type: none"><li>Stability might be disturbed either by sudden events or gradual changes that accumulate over time.</li></ul>

GRADE 8 (8)		
Motion and Stability: Forces and Interactions (PS2)		
8.PS2.1 Apply Newton’s Third Law to design a solution to a problem involving the motion of two objects in a system.*		
<p><b>Clarification Statement:</b> Examples of practical problems could include the impact of collisions between two cars, between a car and stationary objects, and between a meteor and a space vehicle. <b>Assessment Boundary:</b> Assessment is limited to vertical or horizontal interactions in one dimension.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Designing Solutions</b></p> <ul style="list-style-type: none"> <li>Apply scientific principles to design an object, tool, process, or system.</li> </ul>	<p><b>Forces and Motion</b></p> <ul style="list-style-type: none"> <li>For any pair of interacting objects, the force exerted by the first object on the second object is equal in strength to the force that the second object exerts on the first, but in the opposite direction (Newton’s third law).</li> </ul> <p><b>Influence of Science, Engineering, and Technology on Society and the Natural World</b></p> <ul style="list-style-type: none"> <li>The use of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions.</li> </ul>	<p><b>Systems and System Models</b></p> <ul style="list-style-type: none"> <li>Models can be used to represent systems and their interactions (such as inputs, processes, and outputs) and energy, matter, and information flows within the systems.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

**Motion and Stability: Forces and Interactions (PS2)**

**8.PS2.2 Plan an investigation to provide evidence that the change in an object's motion depends on the sum of the forces on the object and the mass of the object.**

**Clarification Statement:** Emphasis is on balanced (Newton's First Law) and unbalanced forces in a system, qualitative comparisons of forces, mass and changes in motion (Newton's Second Law); frame of reference; and specification of units. An increase in force can be caused by increasing the mass, the acceleration, or both the mass and acceleration of an object. An example of evidence could include reasoning from mathematical expressions ( $F=ma$ ). **Assessment Boundary:** Assessment is limited to changing one variable at a time, and to one-dimensional forces and changes in motion in a steady, non-accelerating scenario. Assessment does not include the use of trigonometry.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"> <li>Plan an investigation individually and collaboratively; identify independent and dependent variables and controls, what tools are needed to do the gathering, how measurements will be recorded, and how much data is needed to support a claim.</li> </ul>	<b>Forces and Motion</b> <ul style="list-style-type: none"> <li>The motion of an object is determined by the sum of the forces acting on it; if the total force on the object is not zero its motion will change.</li> <li>The greater the mass of the object, the greater the force needed to achieve the same change in motion.</li> <li>For any given object, a larger force causes a larger change in motion.</li> </ul>	<b>Stability and Change</b> <ul style="list-style-type: none"> <li>Explanations of stability and change in natural or designed systems can be constructed by examining the changes over time and forces at different scales.</li> </ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"> <li>Science knowledge is based upon logical and conceptual connections between evidence and explanations.</li> </ul>		

**Motion and Stability: Forces and Interactions (PS2)**

**8.PS2.3 Ask questions about data to determine the factors that affect the strength of electric and magnetic forces.**

**Clarification Statement:** Examples of devices that use electric and magnetic forces could include electromagnets, electric motors, or generators. Examples of data could include the effect of the number of turns of wire on the strength of an electromagnet, or the effect of increasing the number or strength of magnets on the speed of an electric motor. **Assessment Boundary:** Assessment about questions that require quantitative answers is limited to proportional reasoning and algebraic thinking. Assessment does not include Coulomb's Law.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Asking Questions</b> <ul style="list-style-type: none"><li>Ask questions that can be investigated within the scope of the classroom, outdoor environment, museums, and other public facilities with available resources and, when appropriate, frame a hypothesis based on observations and scientific principles.</li></ul>	<b>Types of Interactions</b> <ul style="list-style-type: none"><li>Electric and magnetic (electromagnetic) forces can be attractive or repulsive, and their sizes depend on the magnitudes of the charges, currents, or magnetic strengths involved and on the distances between the interacting objects.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships may be used to predict phenomena in natural or designed systems.</li></ul>

**Motion and Stability: Forces and Interactions (PS2)**

**8.PS2.4 Construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects.**

**Clarification Statement:** Examples of evidence for arguments could include data generated from simulations or digital tools; and charts displaying mass, strength of interaction, distance from the Sun, and orbital periods of objects within the solar system. **Assessment Boundary:** Assessment does not include Newton's Law of Gravitation or Kepler's Laws. Assessment should be focused on qualitative observations and data, or other quantitative data that does not require mathematical computations beyond basic central tendencies (e.g., mean, medium, mode).

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Construct and present oral and written arguments supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon or a solution to a problem.</li> </ul>	<b>Types of Interactions</b> <ul style="list-style-type: none"> <li>Gravitational forces are always attractive.</li> <li>There is a gravitational force between any two masses, but it is very small except when one or both of the objects have a large mass (e.g., Earth and the Sun).</li> </ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"> <li>Models can be used to represent systems and their interactions (such as inputs, processes, and outputs) and energy and matter flows within systems.</li> </ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"> <li>Science knowledge is based upon logical and conceptual connections between evidence and explanations.</li> </ul>		

**Motion and Stability: Forces and Interactions (PS2)**

**8.PS2.5 Conduct an investigation and evaluate the experimental design to provide evidence that fields exist between objects exerting forces on each other even though the objects are not in contact.**

**Clarification Statement:** Examples of this phenomenon could include the interactions of magnets, electrically-charged strips of tape, and electrically charged balloons. Examples of investigations could include first-hand experiences or simulations. **Assessment Boundary:** Assessment is limited to electric and magnetic fields, and limited to qualitative evidence for the existence of fields.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Conduct an investigation and evaluate the experimental design to produce data to serve as the basis for evidence that can meet the goals of the investigation.</li></ul>	<b>Types of Interactions</b> <ul style="list-style-type: none"><li>Forces that act at a distance (electric, magnetic, and gravitational) can be explained by fields that extend through space and can be mapped by their effect on a test object (a charged object or a ball, respectively).</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships may be used to predict phenomena in natural or designed systems.</li></ul>

**Waves and Their Applications in Technologies for Information Transfer (PS4)**

**8.PS4.1 Use mathematical representations to describe patterns in a simple model for waves that includes how the amplitude of a wave is related to the energy in a wave.**

**Clarification Statement:** Emphasis is on describing waves with both qualitative and quantitative thinking. Examples of qualitative thinking could include how frequency corresponds to sound pitch or how amplitude corresponds to sound volume. Examples of quantitative thinking could be that the energy of the wave is proportional to the square of the amplitude (e.g., if the height of a water wave is doubled, each wave will have four times the energy), or that the amount of energy transferred by waves in a given time is proportional to frequency (e.g., if twice as many water waves hit the shore each minute, then twice as much energy will be transferred to the shore). **Assessment Boundary:** Assessment does not include electromagnetic waves and is limited to standard repeating waves.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematical and Computational Thinking</b> <ul style="list-style-type: none"><li>Use mathematical representation to describe and/or support scientific conclusions and design solutions.</li></ul>	<b>Wave Properties</b> <ul style="list-style-type: none"><li>A simple wave has a repeating pattern with a specific wavelength, frequency, and amplitude.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Graphs and charts can be used to identify patterns in data.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge is Based on Empirical Evidence</b> <ul style="list-style-type: none"><li>Science knowledge is based upon logical and conceptual connections between evidence and explanations</li></ul>		

Waves and Their Applications in Technologies for Information Transfer (PS4)		
<b>8.PS4.3 Integrate qualitative scientific and technical information to support the claim that digitized signals (sent as wave pulses) are a more reliable way to encode and transmit information.*</b>		
<p><b>Clarification Statement:</b> Emphasis is on a basic understanding that waves can be used for communication purposes. Examples could include using fiber optic cable to transmit light pulses, radio wave pulses in WIFI devices, and conversion of stored binary patterns to make sound or text on a computer screen. Examples of reliability in encoding could include transmitting digital information at a higher quality than analog signals (digital vs. analog photographs or videos, or digital vs. analog thermometer). Examples of reliability in transmission could include the degradation of an analog signal compared to a digital signal. <b>Assessment Boundary:</b> Assessment does not include binary counting or the specific mechanism of any given device.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Obtaining, Evaluating, and Communicating Evidence</b></p> <ul style="list-style-type: none"> <li>Integrate qualitative scientific and technical information in written text with that contained in media and visual displays to clarify claims and findings.</li> </ul>	<p><b>Information Technologies and Instrumentation</b></p> <ul style="list-style-type: none"> <li>Many modern communications devices use digitized signals (sent as wave pulses) as they are a more reliable way to encode and transmit information.</li> </ul> <p><b>Influence of Science, Engineering, and Technology on Society and the Natural World</b></p> <ul style="list-style-type: none"> <li>Technologies extend the measurement, exploration, modeling, and computational capacity of scientific investigations.</li> </ul>	<p><b>Structure and Function</b></p> <ul style="list-style-type: none"> <li>Structures can be designed to serve particular functions by taking into account properties of different materials and how materials can be shaped and used.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

From Molecules to Organisms: Structure and Processes (LS1)

**8.LS1.4 Use arguments based on empirical evidence and scientific reasoning to support an explanation for how characteristic animal behaviors and specialized plant structures affect the probability of successful reproduction of animals and plants, respectively**

**Clarification Statement:** Examples of behaviors that affect the probability of animal reproduction could include nest building to protect young from cold, herding of animals to protect young from predators, and vocalization of animals and colorful plumage to attract mates for breeding. Examples of animal behaviors that affect the probability of plant reproduction could include transferring pollen or seeds and creating conditions for seed germination and growth. Examples of plant structures could include bright flowers attracting butterflies that transfer pollen, flower nectar and odors that attract insects that transfer pollen, and hard shells on nuts that squirrels bury. **Assessment Boundary:** Assessment should not focus on the identification of the reproductive plant structures.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"><li>Use an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for phenomena.</li></ul>	<b>Growth and Development of Organisms</b> <ul style="list-style-type: none"><li>Animals engage in characteristic behaviors that increase the odds of reproduction.</li><li>Plants reproduce in a variety of ways, sometimes depending on animal behavior and specialized features for reproduction.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.</li></ul>

From Molecules to Organisms: Structure and Processes (LS1)

**8.LS1.5 Construct a scientific explanation based on evidence for how environmental and genetic factors influence the growth of organisms.**

**Clarification Statement:** Examples of local environmental conditions could include the availability of food, light, space, and water. Examples of genetic factors could include large breed cattle and species of grass affecting growth of organisms. Examples of evidence could include drought decreasing plant growth, fertilizer increasing plant growth, different varieties of plant seeds growing at different rates in different conditions, and fish growing larger in large ponds than they do in small ponds. **Assessment Boundary:** Assessment does not include genetic mechanisms, gene regulation, or biochemical processes.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Construct a scientific explanation based on valid and reliable evidence obtained from sources (including the students' own experiments) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.</li></ul>	<b>Growth and Development of Organisms</b> <ul style="list-style-type: none"><li>Genetic factors, as well as local conditions, affect the growth of the adult plant.</li><li>Plant growth can continue throughout the plant's life through the production of plant matter in photosynthesis. Genetic factors, as well as local conditions, affect the size of the adult plant.</li><li>The growth of an animal is controlled by genetic factors, food intake, and interactions with other organisms, and each species has a typical adult size range.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.</li></ul>

**Heredity: Inheritance and Variation in Traits (LS3)**

**8.LS3.1 Develop and use a model to describe why structural changes to genes (mutations) located on chromosomes may affect proteins and may result in harmful, beneficial, or neutral effects to the structure and function of the organism.**

**Clarification Statement:** Emphasis is on the conceptual understanding that changes in genetic material may result in making different proteins. Examples of scenarios could include radiation-treated plants, genetically modified organisms (e.g., roundup-resistant crops, bioluminescence), and both harmful and beneficial mutations. **Assessment Boundary:** Assessment does not include specific changes at the molecular level, mechanisms for protein synthesis, or specific types of mutations.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models:</b> <ul style="list-style-type: none"> <li>Develop and/or use a model to describe unobservable mechanisms.</li> </ul>	<b>Inheritance of Traits</b> <ul style="list-style-type: none"> <li>Genes are located in the chromosomes of cells, with each chromosome pair containing two variants of each of many distinct genes. Each distinct gene chiefly controls the production of specific proteins, which in turn affects the traits of the individual.</li> <li>Changes (mutations) to genes can result in changes to proteins, which can affect the structures and functions of the organism and thereby change traits.</li> </ul> <b>Variation of Traits</b> <ul style="list-style-type: none"> <li>In addition to variations that arise from sexual reproduction, genetic information can be altered because of mutations.</li> <li>Though rare, mutations may result in changes to the structure and function of proteins.</li> <li>Some changes are beneficial, others harmful, and some neutral to the organism.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>Complex and microscopic structures and systems can be visualized, modeled, and used to describe how their function depends on the shapes, composition, and relationships among its parts; therefore, complex natural structures/systems can be analyzed to determine how they function.</li> </ul>

**Heredity: Inheritance and Variation in Traits (LS3)**

**8.LS3.2 Develop and use a model to describe why asexual reproduction results in offspring with identical genetic information and sexual reproduction results in offspring with genetic variation.**

**Clarification Statement:** Emphasis is on using the results of models such as Punnett squares, diagrams, and simulations to describe the cause-and-effect relationship of gene transmission from parent(s) to offspring and resulting genetic variation. Examples of relationships could include the transfer of genetic information in the form of genes, the number of chromosomes of the offspring, the number of chromosomes of the parents, and the number of parents. Models could be used to describe a causal account for why sexual and asexual reproduction results in different amounts of genetic variation in offspring relative to their parents. **Assessment Boundary:** The assessment should measure the students' abilities to explain the general outcomes of sexual versus asexual reproduction in terms of variation seen in the offspring.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop and/or use a model to show the relationships among variables, including those that are not observable but predict observable phenomena.</li></ul>	<b>Growth and Development of Organisms</b> <ul style="list-style-type: none"><li>Organisms reproduce, either sexually or asexually, and transfer their genetic information to their offspring.</li></ul> <b>Inheritance of Traits</b> <ul style="list-style-type: none"><li>Variations of inherited traits between parent and offspring arise from genetic differences that result from the subset of chromosomes (and therefore genes) inherited.</li></ul> <b>Variation of Traits</b> <ul style="list-style-type: none"><li>In sexually reproducing organisms, each parent contributes half of the genes acquired (at random) by the offspring. Individuals have two of each chromosome and hence two alleles of each gene, one acquired from each parent. These versions may be identical or may differ from each other.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships may be used to predict phenomena in natural systems.</li></ul>

Biological Unity and Diversity (LS4)

**8.LS4.1 Analyze and interpret data to identify patterns within the fossil record that document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth.**

**Clarification Statement:** Emphasis is on finding patterns of change in the complexity of anatomical structures in organisms and the chronological order of fossils' appearance in the rock layers. The natural laws that operate today are assumed to operate as they have in the past. **Assessment Boundary:** Assessment does not include the names of individual species or geological time scales in the fossil record.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyze and Interpret Data</b> <ul style="list-style-type: none"><li>Analyze and interpret data to determine similarities and differences in findings.</li></ul>	<b>Evidence of Common Ancestry and Diversity</b> <ul style="list-style-type: none"><li>Fossils are mineral replacements, preserved remains, or traces of organisms that lived in the past. Thousands of layers of sedimentary rock not only provide evidence of the history of Earth itself but also of changes in organisms whose fossil remains have been found in those layers.</li><li>The collection of fossils and their placement in chronological order (e.g., through the location of the sedimentary layers in which they are found) is known as the fossil record. It documents the existence, diversity, extinction, and change of many life forms throughout the history of life on Earth.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Graphs and charts can be used to identify patterns in data.</li></ul>

**Biological Unity and Diversity (LS4)**

**8.LS4.2 Apply scientific ideas to construct an explanation for the patterns of anatomical similarities and differences among modern organisms and between modern and fossil organisms to infer ancestral relationships.**

**Clarification Statement:** Emphasis is on explanations of the ancestral relationships among organisms in terms of similarities or differences of anatomical features or structures. Examples could include how structural similarities/differences could determine relationships between two modern organisms (e.g., wings of birds vs. bats vs. insects) or modern and fossil organisms (e.g., fossilized horses compared to modern horses, trilobites compared to horseshoe crabs). **Assessment Boundary:** Assessment does not include the names of individual species or geological eras in the fossil record.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"> <li>Construct a scientific explanation based on valid and reliable evidence.</li> </ul>	<b>Evidence of Common Ancestry and Diversity</b> <ul style="list-style-type: none"> <li>Anatomical similarities and differences between various organisms living today and between them and organisms in the fossil record serve as evidence of ancestral relationships among organisms and changes in populations over time.</li> </ul>	<b>Patterns</b> <ul style="list-style-type: none"> <li>Graphs and charts can be used to identify patterns in data.</li> </ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge Assumes an Order and Consistency in Natural Systems</b> <ul style="list-style-type: none"> <li>Science assumes that objects and events in natural systems occur in consistent patterns that are understandable through measurement and observation.</li> </ul>		

**Biological Unity and Diversity (LS4)**

**8.LS4.3 Analyze displays of pictorial data to compare patterns of similarities in the embryological development across multiple species to identify relationships not evident in the fully formed anatomy.**

**Clarification Statement:** Emphasis is on inferring general patterns of relatedness among embryos of different organisms by comparing the macroscopic appearance in diagrams or pictures. Students could use patterns of similarities and changes in embryo development to describe evidence for relatedness among apparently diverse species, including similarities that are not evident in the fully formed anatomy (e.g., mammals and fish are more closely related than they appear to be based on their adult features, whales are related to land animals). **Assessment Boundary:** Assessment of comparisons is limited to gross appearance of anatomical structures in embryological development.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyze and Interpret Data</b> <ul style="list-style-type: none"> <li>Analyze and interpret data to determine similarities and differences in findings.</li> </ul>	<b>Evidence of Common Ancestry and Diversity</b> <ul style="list-style-type: none"> <li>Comparison of embryological development of different species also reveals similarities that show relationships not evident in the fully-formed anatomy.</li> </ul>	<b>Patterns</b> <ul style="list-style-type: none"> <li>Graphs and charts can be used to identify patterns in data.</li> </ul>

**8.LS4.4 Construct an explanation based on evidence that describes how genetic variations of traits in a population increase some individuals' probability of surviving and reproducing in a specific environment.**

**Clarification Statement:** Emphasis is on using simple probability statements and proportional reasoning to construct explanations for why, in a specific environment impacted by different factors (e.g., limited food availability, predators, nesting site availability, light availability), some traits confer advantages that make it more probable that an organism will be able to survive and reproduce there. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"> <li>Construct an explanation that includes qualitative or quantitative relationships between variables that predict and/or describe phenomena.</li> </ul>	<b>Natural Selection</b> <ul style="list-style-type: none"> <li>Natural selection leads to the predominance of certain traits in a population, and the suppression of others.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.</li> </ul>

Biological Unity and Diversity (LS4)

**8.LS4.5 Gather and synthesize information about the practices that have changed the way humans influence the inheritance of desired traits in organisms.**

**Clarification Statement:** Emphasis is on synthesizing information from reliable sources about the influence of humans on genetic outcomes in artificial selection (e.g., genetic modification, animal husbandry, and gene therapy) and on the impacts these practices have on society, as well as the technologies leading to these scientific discoveries. **Assessment Boundary:** The assessment should provide evidence of students' abilities to understand and communicate how technology affects both individuals and society.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"> <li>Gather, read, and synthesize information from multiple appropriate sources; assess the credibility, accuracy, and possible bias of each publication and method used; and describe how they are supported or not supported by evidence.</li> </ul>	<b>Natural Selection</b> <ul style="list-style-type: none"> <li>In artificial selection, humans have the capacity to influence certain characteristics of organisms by selective breeding. One can choose desired parental traits by genes, which are then passed onto offspring.</li> </ul> <b>Interdependence of Science, Engineering, and Technology</b> <ul style="list-style-type: none"> <li>Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.</li> </ul>

Connections to Scientific Literacy

**Science Addresses Questions About the Natural and Material World**

- Scientific knowledge can describe the consequences of actions but does not necessarily prescribe the decisions that society takes.

Biological Unity and Diversity (LS4)

**8.LS4.6 Use mathematical representations to support explanations of how natural selection may lead to increases and decreases of specific traits in populations over time.**

**Clarification Statement:** Emphasis is on using mathematical models, probability statements, and proportional reasoning to support explanations of trends in changes to populations over time. **Assessment Boundary:** The assessment should provide evidence of students' abilities to explain trends in data for the number of individuals with specific traits changing over time. Assessment does not include Hardy Weinberg calculations.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"><li>Use mathematical representation to describe and/or support scientific conclusions and design solutions.</li></ul>	<b>Adaptation</b> <ul style="list-style-type: none"><li>Adaptation by natural selection acting over generations is one important process by which species change over time in response to changes in environmental conditions.</li><li>Traits that support successful survival and reproduction in the new environment become more common; those that do not become less common. Thus, the distribution of traits in a population change.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.</li></ul>

**Earth's Place in the Universe (ESS1)**

**8.ESS1.1 Develop and use a model of the Earth-Sun-Moon system to describe the cyclic patterns of lunar phases, eclipses of the Sun and Moon, and seasons.**

**Clarification Statement:** Earth's rotation relative to the positions of the Moon and Sun describes the occurrence of tides; the revolution of Earth around the Sun explains the annual cycle of the apparent movement of the constellations in the night sky; the Moon's revolution around Earth explains the cycle of spring/neap tides and the occurrence of eclipses; and the Moon's elliptical orbit mostly explains the occurrence of total and annular eclipses. The position and tilt of Earth, as it revolves around the Sun, explain why seasons occur. Examples of models can be physical, graphical, or conceptual. **Assessment Boundary:** Definitions of spring or neap tides should not be included.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"> <li>Develop and use a model to show the relationships among variables.</li> </ul>	<b>The Universe and Its Stars</b> <ul style="list-style-type: none"> <li>Patterns of the apparent motion of the Sun, Moon, and stars in the sky can be observed, described, predicted, and explained with models.</li> </ul> <b>Earth and the Solar System</b> <ul style="list-style-type: none"> <li>The model of the solar system can explain eclipses of the Sun and Moon.</li> <li>Earth's spin axis is fixed in direction over the short term but tilted relative to its orbit around the Sun. The seasons are a result of its tilt and are caused by the differential intensity of sunlight on different areas of Earth across the year.</li> </ul>	<b>Patterns</b> <ul style="list-style-type: none"> <li>Patterns can be used to identify cause and effect relationships.</li> </ul>
<b>Connections to Scientific Literacy</b>

**Earth's Place in the Universe (ESS1)**

**8.ESS1.2 Develop and use a model to describe the role of gravity in the motions within galaxies and the solar system.**

**Clarification Statement:** Emphasis for the model is on the effects of gravity and inertia as the forces that hold together the solar system and Milky Way Galaxy, and control orbital motions within them. Examples of models can be physical (e.g., the analogy of distance along a football field or computer visualizations of elliptical orbits) or conceptual (e.g., mathematical proportions relative to the size of familiar objects such as a school or state). Components of student models could include gravity, our own solar system, the Milky Way galaxy, and/or other galaxies in the universe.

**Assessment Boundary:** Assessment does not include Kepler's Laws of orbital motion or the apparent retrograde motion of the planets as viewed from Earth.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"> <li>Develop and use a model to show the relationships among variables.</li> </ul>	<b>The Universe and Its Stars</b> <ul style="list-style-type: none"> <li>Earth and its solar system are part of the Milky Way Galaxy, which is one of the many galaxies in the universe.</li> </ul> <b>Earth and the Solar System</b> <ul style="list-style-type: none"> <li>The solar system consists of the Sun and a collection of objects, including planets, their moons, and asteroids that are held in orbit around the Sun by its gravitational pull on them.</li> <li>The solar system appears to have formed from a disk of dust and gas drawn together by gravity.</li> </ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"> <li>Models can be used to represent systems and their interactions.</li> </ul>

Earth's Place in the Universe (ESS1)

8.ESS1.3 Analyze and interpret data to determine scale properties of objects in the solar system.\*

**Clarification Statement:** Emphasis is on the analysis of data from Earth-based instruments, space-based telescopes, and spacecraft to determine similarities and differences among solar system objects. Examples of scale properties include the sizes of an object's layers (e.g., crust and atmosphere), surface features (e.g., volcanoes), and orbital radius. Examples of data include statistical information, drawings, photographs, and models. **Assessment Boundary:** Assessment emphasis is on data analysis of properties of the planets and should not include recalling facts about the planets and other solar system bodies.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"><li>Analyze and interpret data to determine similarities and differences in findings.</li></ul>	<b>Earth and the Solar System</b> <ul style="list-style-type: none"><li>The solar system consists of the Sun and a collection of objects, including planets, their moons, and asteroids that are held in orbit around the Sun by its gravitational pull on them.</li></ul> <b>Interdependence of Science, Engineering, and Technology</b> <ul style="list-style-type: none"><li>Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.</li></ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"><li>Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.</li></ul>

**Matter and Its Interactions (PS1)**

**PS.PS1.5 Apply scientific principles and evidence to provide an explanation for how changing the temperature or concentration of reactant particles affects the rate at which a reaction occurs.**

**Clarification Statement:** Emphasis is on student reasoning that focuses on the qualitative evidence for number and energy of collisions (Collision Theory) and relationships between rate and temperature. **Assessment Boundary:** Assessment is limited to explaining the effect of changing one condition at a time - either temperature or concentration - in a simple reaction with only two reactants.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Apply scientific reasoning, theory, and/or models to link evidence to the claims to assess the extent to which the reasoning and data support the explanation or conclusion.</li></ul>	<b>Chemical Reactions</b> <ul style="list-style-type: none"><li>Chemical processes, their rates, and whether or not energy is stored or released can be understood in terms of the collisions of molecules and the rearrangement of atoms into new molecules, with consequent changes in the sum of all bond energies in the set of molecules that are matched by changes in kinetic energy.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships can be suggested and predicted for complex natural and human-designed systems by examining what is known about smaller scale mechanisms within the system.</li></ul>

**Matter and Its Interactions (PS1)**

**PS.PS1.7 Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.**

**Clarification Statement:** Emphasis is on using mathematical concepts to show the proportional relationships between masses of atoms in the reactants and products, and the translation of these relationships at the macroscopic scale. Mathematical representations can include balancing chemical equations to illustrate the laws of conservation of mass, constant composition (definite proportions) and the ratio of the coefficients between reactants and products. **Assessment Boundary:** Assessment does not include complex chemical reactions (e.g., redox reactions) or stoichiometry. Emphasis is on assessing students' use of mathematical reasoning and not on memorization and rote application of problem-solving techniques.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"><li>Use mathematical representations of phenomena to support claims.</li></ul>	<b>Chemical Reactions</b> <ul style="list-style-type: none"><li>The fact that atoms are conserved, together with knowledge of the chemical properties of the elements involved, can be used to describe and predict chemical reactions.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>The total amount of energy and matter in closed systems is conserved.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge Assumes an Order and Consistency in Natural Systems</b> <ul style="list-style-type: none"><li>Science assumes the universe is a vast single system in which basic laws are consistent.</li></ul>		

**Motion and Stability: Forces and Interactions (PS2)**

**PS.PS2.1 Analyze and interpret data to support the claim that a causal relationship exists between the net force exerted on an object and the resulting change in motion, as described in Newton's second law of motion.**

**Clarification Statement:** Examples of data could include tables or graphs of position or velocity of an object as a function of time. Examples of objects subjected to a net force can include objects in free fall, objects sliding down a ramp, or moving objects pulled by a constant force.

**Assessment Boundary:** Assessment is limited to macroscopic objects moving in one-dimensional motion (a single straight line), at everyday speeds and ignores the effects of air resistance on the objects.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"> <li>Analyze data using tools, technologies, and/or models (e.g., computational, mathematical) in order to make valid and reliable scientific claims.</li> </ul>	<b>Forces and Motion</b> <ul style="list-style-type: none"> <li>Newton's second law accurately predicts changes in the motion of macroscopic objects.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li> </ul>

**PS.PS2.2 Use mathematical representations to support the explanation that the total momentum of a system of objects is conserved when there is no net force on the system.**

**Clarification Statement:** Emphasis is on both the mathematical calculation of momentum conservation during interactions, and the conceptual understanding of this principle. **Assessment Boundary:** Assessment is limited to systems of two macroscopic bodies moving in one dimension and does not include naming the types of collisions. Assessment should provide evidence of students' abilities to explain the mathematical relationships between momentum, mass, and velocity.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"> <li>Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.</li> </ul>	<b>Forces and Motion</b> <ul style="list-style-type: none"> <li>Momentum is defined for a particular frame of reference; it is the mass times the velocity of the object.</li> <li>If a system interacts with objects outside itself, the total momentum of the system can change; however, any such change is balanced by change in the momentum of objects outside the system.</li> </ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"> <li>When investigating or describing a system, the boundaries and initial conditions of the system need to be defined.</li> </ul>

**Motion and Stability: Forces and Interactions (PS2)**

**PS.PS2.3 Apply scientific and engineering ideas to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision.\***

**Clarification Statement:** Evaluation could include determining the success of a device at protecting an object from damage. Examples of devices could include football helmets, parachutes, and car restraint systems like seatbelts and airbags. Refinement of the device may include modifying one or more parts of the device to improve performance. **Assessment Boundary:** Assessment is limited to qualitative evaluations and/or algebraic manipulations.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts

## Matter and Its Interactions (PS1)

**CH.PS1.2 Construct and revise an explanation for the outcome of a simple chemical reaction based on the outermost electron states of atoms, trends in the periodic table, knowledge of the patterns of chemical properties, and formation of compounds.**

**Clarification Statement:** Periodic trends (e.g., ionization energy, electronegativity, reactivity), patterns of valence electrons, and classifying reaction types should be utilized when constructing and revising explanations for the prediction of products. Examples of reaction types could include single displacement, double displacement, synthesis, decomposition, combustion, oxidation-reduction, and acid-base. **Assessment Boundary:** Assessment is limited to chemical reactions involving main group elements and polyatomic ions (e.g. Nitrate, Nitrite, Sulfate, Hydroxide, Carbonate, and Phosphate).

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Construct and revise an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, and peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.</li></ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"><li>The periodic table orders elements horizontally by the number of protons in the atom's nucleus and places those with similar chemical properties in columns. The repeating patterns of this table reflect patterns of outer electron states.</li></ul> <b>Chemical Reactions</b> <ul style="list-style-type: none"><li>The fact that atoms are conserved, together with knowledge of the chemical properties of the elements involved, can be used to describe and predict chemical reactions.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena.</li></ul>

## Matter and Its Interactions (PS1)

**CH.PS1.3 Plan and conduct an investigation to compare the structure of substances at the macroscopic scale to infer the strength of electrical forces between particles.**

**Clarification Statement:** Emphasis is on understanding the relative strengths of forces between particles, not on identifying specific intermolecular forces (e.g., dipole-dipole, London dispersion forces). Examples of particles could include ions, atoms, molecules, and networked materials (e.g., graphite). Examples of macroscopic properties of substances could include melting point, boiling point, vapor pressure, and surface tension.

**Assessment Boundary:** Assessment does not include calculations related to any macroscopic scale property. Assessment does not include the identification of specific intermolecular forces.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements; consider limitations on the precision of the data (e.g., number of trials, cost, risk, time); and refine the design accordingly.</li></ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"><li>The structure and interactions of matter at the macroscopic scale are determined by electrical forces within and between atoms.</li></ul> <b>Types of Interactions</b> <ul style="list-style-type: none"><li>Attraction and repulsion between electric charges at the atomic scale explain the structure, properties, and transformations of matter, as well as the contact forces between material objects.</li></ul>	<b>Structure and Function</b> <ul style="list-style-type: none"><li>The functions and properties of natural and designed objects and systems can be inferred from their overall structure, the way their components are shaped and used, and the molecular substructures of its various materials.</li></ul>

## Matter and Its Interactions (PS1)

**CH.PS1.4 Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.**

**Clarification Statement:** Emphasis is on the idea that a chemical reaction is a system that involves an overall change in energy that is due to the absorption of energy when bonds are broken and the release of energy when new bonds are formed. Examples of models could include molecular-level drawings and diagrams of reactions, graphs showing the relative energies of reactants and products, and representations showing energy is conserved. **Assessment Boundary:** Assessment does not include calculating the total bond energy changes during a chemical reaction from the bond energies of reactants and products.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop a model based on evidence to illustrate the relationships between systems or between components of a system.</li></ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"><li>A stable molecule has less energy than the same set of atoms separated; one must provide at least this energy in order to take the molecule apart.</li></ul> <b>Chemical Reactions</b> <ul style="list-style-type: none"><li>Chemical processes, their rates, and whether or not energy is stored or released can be understood in terms of the collisions of molecules and rearrangements of atoms into new molecules, with consequent changes in the sum of all bond energies in the set of molecules that are matched by changes in kinetic energy.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.</li></ul>

Matter and Its Interactions (PS1)

**CH.PS1.5 Apply scientific principles and evidence to provide an explanation for how changing the temperature or concentration of reactant particles affects the rate at which a reaction occurs.**

**Clarification Statement:** Emphasis is on student reasoning that focuses on the number and energy of collisions between molecules (Collision Theory). Examples of reaction conditions that affect rate could include temperature, concentration, surface area/particle size, pressure, or the addition of a catalyst. **Assessment Boundary:** Assessment is limited to explaining the result of changing one condition at a time in a simple reaction in which there are only two reactants.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Apply scientific reasoning, theory, and/or models to link evidence to the claims to assess the extent to which the reasoning and data support the explanation or conclusion.</li></ul>	<b>Chemical Reactions</b> <ul style="list-style-type: none"><li>Chemical processes, their rates, and whether or not energy is stored or released can be understood in terms of the collisions of molecules and the rearrangement of atoms into new molecules, with consequent changes in the sum of all bond energies in the set of molecules that are matched by changes in kinetic energy.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships can be suggested and predicted for complex natural and human designed systems by examining what is known about smaller scale mechanisms within the system.</li></ul>

## Matter and Its Interactions (PS1)

**CH.PS1.6 Refine the design of a chemical system by specifying a change in conditions that would affect the amounts of reactants or products at equilibrium.\***

**Clarification Statement:** Emphasis is on the qualitative application of Le Châtelier's Principle and on refining designs of chemical reaction systems, including descriptions of the connection between changes made at the macroscopic scale and what happens at the microscopic scale. Designs may include ways to achieve the desired effect on a system at equilibrium by changing temperature, pressure, and/or adding or removing reactants or products. **Assessment Boundary:** Assessment is limited to specifying the change in only one variable at a time. Assessment does not include calculating equilibrium constants and concentrations.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Designing Solutions</b> <ul style="list-style-type: none"><li>Refine a solution to a complex real-world problem, based on scientific knowledge, student-generated sources of evidence, prioritized criteria, and trade off considerations.</li></ul>	<b>Chemical Reactions</b> <ul style="list-style-type: none"><li>In many situations, a dynamic and condition-dependent balance between a reaction and the reverse reaction determines the numbers of all types of molecules present.</li></ul> <b>Optimizing the Design Solution</b> <ul style="list-style-type: none"><li>Criteria may need to be broken down into simpler ones that can be approached systematically, and decisions about the priority of certain criteria over others (trade-offs) may be needed.</li></ul>	<b>Stability and Change</b> <ul style="list-style-type: none"><li>Much of science deals with constructing explanations of how things change and how they remain stable.</li></ul>

\*This standard emphasizes engineering skills or ideas.

## Matter and Its Interactions (PS1)

**CH.PS1.7 Use mathematical representation to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.**

**Clarification Statement:** Mathematical representations could include balanced chemical equations that represent the laws of conservation of mass and constant composition (definite proportions), and mass-to-mass stoichiometry. The mole concept and stoichiometry are used to show proportional relationships between masses of reactants and products. **Assessment Boundary:** Assessment does not include complex chemical reactions. Emphasis is on assessing students' use of mathematical reasoning and does not include recall of mathematical equations and rote application of problem-solving techniques.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"><li>Use mathematical representations of phenomena to support claims.</li></ul>	<b>Chemical Reactions</b> <ul style="list-style-type: none"><li>The fact that atoms are conserved, together with knowledge of the chemical properties of the elements involved, can be used to describe and predict chemical reactions.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>The total amount of energy and matter in closed systems is conserved.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge Assumes an Order and Consistency in Natural Systems</b> <ul style="list-style-type: none"><li>Science assumes the universe is a vast single system in which basic laws are consistent.</li></ul>		

Matter and Its Interactions (PS1)

**CH.PS1.8 Develop models to illustrate the changes in composition of the nucleus of the atom and the energy released during the processes of fission, fusion, and radioactive decay.**

**Clarification Statement:** Emphasis is on qualitative models, such as pictures or diagrams, and on the scale of energy released in nuclear processes relative to other kinds of transformations. Examples of nuclear processes could include the formation of elements through fusion in stars, generation of electricity in a nuclear power plant, or the use of radioisotopes in nuclear medicine. **Assessment Boundary:** Assessment does not include quantitative calculation of energy released (e.g., binding energy). Assessment is limited to alpha, beta, and gamma radioactive decay.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.</li></ul>	<b>Nuclear Processes</b> <ul style="list-style-type: none"><li>Nuclear processes, including fusion, fission, and radioactive decay of unstable nuclei, involve release or absorption of energy.</li><li>The total number of neutrons plus protons does not change in any nuclear process.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>In nuclear processes, atoms are not conserved, but the total number of protons plus neutrons are conserved.</li></ul>

**Motion and Stability: Forces and Interactions (PS2)**

**CH.PS2.6 Communicate scientific and technical information about why the molecular level of designed materials determines how the material functions.\***

**Clarification Statement:** Emphasis is on the attractive and repulsive forces at the molecular level that determine the material's function. Examples could include why metals are used for electrical conductivity, why flexible but durable materials are composed of long chained molecules, and how pharmaceuticals are designed to interact with specific receptors. Scientific and technical information should focus on the molecular structures of specific designed materials and limit comparison to two substances of the same type. **Assessment Boundary:** Assessment is limited to provided molecular structures or specific designed materials.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"><li>Communicate scientific and technical information (e.g., about the process of development and the design and performance of a proposed process or system) in multiple formats (including oral, graphical, textual, and mathematical).</li></ul>	<b>Types of Interactions</b> <ul style="list-style-type: none"><li>Attraction and repulsion between electric charges at the atomic scale explain the structure, properties, and transformations of matter, as well as the contact forces between material objects.</li></ul>	<b>Structure and Function</b> <ul style="list-style-type: none"><li>Investigating or designing new systems or structures requires a detailed examination of the properties of different materials, the structures of different components, and the connections of components to reveal its function and/or solve a problem.</li></ul>

\*This standard emphasizes engineering skills or ideas.

Energy (PS3)		
<b>CH.PS3.3 Design, build, and refine a device that works within given constraints to convert one form of energy into another form of energy.*</b>		
<p><b>Clarification Statement:</b> Emphasis is on both qualitative and quantitative evaluations of devices. Sources of energy could include those from chemical or nuclear reactions. Examples of devices could include lemon or potato clocks, a voltaic cell (batteries), hand warmers, solar panels/solar ovens, and nuclear power generation through simulations. Examples of constraints placed on a device could include the cost of materials, types of materials available, having to use renewable energy, an efficiency threshold, and time to build and/or operate the device.</p> <p><b>Assessment Boundary:</b> Assessment for quantitative evaluations is limited to total output for a given input. Assessment is limited to devices constructed with materials provided to students.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Designing Solutions</b></p> <ul style="list-style-type: none"> <li>Design, evaluate, and/or refine a solution to a complex real-world problem, based on scientific knowledge, student-generated sources of evidence, prioritized criteria, and trade-off considerations.</li> </ul>	<p><b>Definitions of Energy</b></p> <ul style="list-style-type: none"> <li>At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy.</li> </ul> <p><b>Defining and Delimiting an Engineering Problem</b></p> <ul style="list-style-type: none"> <li>Criteria and constraints also include satisfying any requirements set by society, such as taking issues of risk mitigation into account, and they should be quantified to the extent possible and stated in such a way that one can tell if a given design meets them.</li> </ul> <p><b>Influence of Science, Engineering, and Technology on Society and the Natural World</b></p> <ul style="list-style-type: none"> <li>Modern civilization depends on major technological systems. Engineers continuously modify these technological systems by applying scientific knowledge and engineering design practices to increase benefits while decreasing costs and risks.</li> </ul>	<p><b>Energy and Matter</b></p> <ul style="list-style-type: none"> <li>Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

Energy (PS3)

**CH.PS3.4 Plan and conduct an investigation to provide evidence that the transfer of energy between components in a closed system involves changes in energy dispersal and results in a more uniform energy distribution among the components in the system while total energy is conserved.**

**Clarification Statement:** Emphasis is on analyzing data from student investigations and using mathematical thinking to describe the thermal energy changes both quantitatively and conceptually. Examples of investigations could include calorimetry (e.g., dissolving a substance in water, mixing two solutions, and combining two components) where students measure temperatures and calculate heat.

**Assessment Boundary:** Assessment is limited to investigations based on materials and tools provided to students. Assessment includes both quantitative and conceptual descriptions of energy change.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Plan and conduct investigations individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements; consider limitations on the precision of the data (e.g., number of trials, cost, risk, time); and refine the design accordingly.</li></ul>	<b>Conservation of Energy and Energy Transfer</b> <ul style="list-style-type: none"><li>Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems.</li><li>Uncontrolled systems always evolve toward more stable states - that is, toward more uniform energy distribution (e.g., water flows downhill, objects hotter than surrounding environments cool down).</li></ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"><li>When investigating or describing a system, the boundaries and initial conditions of the system need to be defined and their inputs and outputs analyzed and described using models.</li></ul>

Waves and Their Applications in Technologies for Information Transfer (PS4)

**CH.PS4.1 Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media.**

**Clarification Statement:** Emphasis is on using mathematical relationships (e.g.,  $v = f\lambda$ ) to understand different types of electromagnetic waves and how different media change the speed of waves. Examples of phenomena could include electromagnetic radiation traveling in a vacuum or glass, sound waves traveling through air or water, flame tests, fireworks, and the effects of light, such as causing sunburns, increasing kinetic energy of particles, and enabling electronic transmissions. **Assessment Boundary:** Assessment is limited to algebraic relationships and describing those relationships qualitatively.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"><li>Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.</li></ul>	<b>Wave Properties</b> <ul style="list-style-type: none"><li>The wavelength and frequency of a wave are related to one another by the speed of travel of the wave, which depends on the type of wave and the medium through which it is passing.</li></ul> <b>Electromagnetic Radiation</b> <ul style="list-style-type: none"><li>When light or longer wavelength EM radiation is absorbed in matter, it is generally converted into thermal energy (heat). Shorter wavelength EM radiation (e.g., ultraviolet, x-rays, gamma rays) can ionize atoms and cause damage to living cells. Photoelectric materials emit electrons when they absorb light of high enough frequency.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li></ul>

Waves and Their Applications in Technologies for Information Transfer (PS4)		
<b>CH.PS4.3 Develop an argument for how scientific evidence supports the explanation that electromagnetic radiation can be described either by the wave model or the particle model, and in some situations one model is more useful than the other.</b>		
<b>Clarification Statement:</b> Emphasis is on how the experimental evidence supports the claim and how a theory is generally modified in light of new evidence. Examples of a phenomenon could include resonance, interference, diffraction, and the photoelectric effect. <b>Assessment Boundary:</b> Assessment does not include using quantum theory.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Evaluate the claims, evidence, and reasoning behind currently accepted explanations or solutions to determine the merits of arguments.</li> </ul>	<b>Wave Properties</b> <ul style="list-style-type: none"> <li>Waves can interfere (add or cancel) with one another as they cross, depending on their relative phase (e.g., relative position of peaks and troughs of the waves), but they emerge unaffected by each other.</li> <li>Boundary: The discussion at this grade level is qualitative only; it can be based on the fact that two sounds can pass a location in different directions without getting mixed up.</li> </ul> <b>Electromagnetic Radiation</b> <ul style="list-style-type: none"> <li>Electromagnetic radiation (e.g., radio, microwaves, light) can be modeled as a wave of changing electric and magnetic fields or as particles called photons. The wave model is useful for explaining many features of electromagnetic radiation, and the particle model explains other features.</li> </ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"> <li>Models (e.g., physical, mathematical, computer) can be used to simulate systems and interactions, including energy, matter, and information flow within and between systems at different scales.</li> </ul>
Connections to Scientific Literacy		
<b>Science Models, Laws, and Theories Explain Natural Phenomena</b> <ul style="list-style-type: none"> <li>A scientific theory is a substantiated explanation of some aspect of the natural world, based on a body of facts that have been repeatedly confirmed through observation and experiment, and the science community validates each theory before it is accepted. If new evidence is discovered that the theory does not accommodate, the theory is generally modified in light of this new evidence.</li> </ul>		

## Oklahoma Academic Standards for Science Physics

Physics (PH)		
Matter and Its Interactions (PS1)		
<b>PH.PS1.8 Develop models to support explanations of the changes in stability and composition of the nucleus of the atom and the associated energies released during the processes of fission, fusion, and radioactive decay.</b>		
<b>Clarification Statement:</b> Emphasis is on qualitative models (e.g., pictures, diagrams), on the scale of energy released in nuclear processes relative to other kinds of transformations, and the conceptual understanding of quantitative data represented in graphs or tables. Examples of nuclear processes could include the formation of elements through fusion in stars, generation of electricity in a nuclear power plant, or the use of radioisotopes in nuclear medicine. <b>Assessment Boundary:</b> Assessment does not include quantitative calculations of energy released (e.g., binding energy) or calculation of radioactive decay rates (e.g., half-lives or absolute specimen dating). Assessment is limited to alpha, beta, and gamma radioactive decay.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts

**Motion and Stability: Forces and Interactions (PS2)**

**PH.PS2.1 Analyze and interpret data to support the claim that Newton’s second law of motion describes the mathematical relationship among the mass, acceleration, and net force acting on macroscopic objects.**

**Clarification Statement:** Examples of data could include tables or graphs of position, velocity, or acceleration of an object as a function of time. Examples of objects subjected to a net external force could include objects in free-fall, objects sliding down a ramp, or objects changing velocity due to a combination of forces. The relationship  $F_{\text{net}} = ma$  should be explored qualitatively and quantitatively, as well as conceptual understanding of the limitations of the law (e.g., objects moving at relativistic velocities and sub-atomic systems). **Assessment Boundary:** Assessment is limited to macroscopic objects moving in one-dimensional motion, at non-relativistic speeds. Quantitative calculations of quantum physics or relativity are not included at this grade level.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"> <li>Analyze data using tools, technologies, and/or models (e.g., computations, mathematical) in order to make valid and reliable scientific claims or determine an optimal design solution.</li> </ul>	<b>Forces and Motion</b> <ul style="list-style-type: none"> <li>Newton’s Second Law accurately predicts changes in the motion of macroscopic objects but requires revision for sub-atomic systems or for objects traveling at speeds approaching the speed of light.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li> </ul>

**Connections to Scientific Literacy**

**Science Models, Laws, and Theories Explain Natural Phenomena**

- Theories and laws provide explanations in science. Laws are statements or descriptions of the relationships among observable phenomena.

**Motion and Stability: Forces and Interactions (PS2)**

**PH.PS2.2 Use mathematical representations to support the claim that the total momentum of a system of objects is conserved when no net external force acts on the system.**

**Clarification Statement:** Emphasis is on the quantitative conservation of momentum in interactions and the qualitative meaning of this principle. Examples could include one-dimensional elastic or inelastic collisions between objects within the system. **Assessment Boundary:** Assessment is limited to systems of two macroscopic bodies moving in one dimension and does not include naming the types of collisions.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"><li>Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.</li></ul>	<b>Forces and Motion</b> <ul style="list-style-type: none"><li>Momentum is defined for a particular frame of reference; it is the mass times the velocity of the object.</li><li>If a system interacts with objects outside itself, the total momentum of the system can change; however, any such change is balanced by change in the momentum of objects outside the system.</li></ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"><li>When investigating or describing a system, the boundaries and initial conditions of the system need to be defined.</li></ul>

**Motion and Stability: Forces and Interactions (PS2)**

**PH.PS2.3 Apply scientific and engineering ideas to design, evaluate, and refine a device that minimizes the force on a macroscopic object during a collision.\***

**Clarification Statement:** An example of evaluation could include determining the success of the device at protecting an object from damage. Examples of devices could include football helmets, parachutes, and car restraint systems, such as seatbelts and airbags. Refinement of the device may include modifying one or more parts or all of the device to improve performance of the device. **Assessment Boundary:** Assessment is limited to qualitative evaluations and/or algebraic manipulations.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Designing Solutions</b> <ul style="list-style-type: none"> <li>Design, evaluate, and/or refine a solution to a complex real-world problem, based on scientific knowledge, student-generated sources of evidence, prioritized criteria, and trade off considerations.</li> </ul>	<b>Forces and Motion</b> <ul style="list-style-type: none"> <li>If a system interacts with objects outside itself, the total momentum of the system can change; however, any such change is balanced by change in the momentum of objects outside the system.</li> </ul> <b>Defining and Delimiting an Engineering Problem</b> <ul style="list-style-type: none"> <li>Criteria and constraints also include satisfying any requirements set by society, such as taking issues of risk mitigation into account, and they should be quantified to the extent possible and stated in such a way that one can tell if a given design meets them.</li> </ul> <b>Optimizing the Design Solution</b> <ul style="list-style-type: none"> <li>Criteria may need to be broken down into simpler ones that can be approached systematically, and decisions about the priority of certain criteria over others may be needed.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Systems can be designed to cause a desired effect.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

**Motion and Stability: Forces and Interactions (PS2)**

**PH.PS2.4 Use mathematical representations of Newton’s Law of Gravitation and Coulomb’s Law to describe and predict the gravitational and electrostatic forces between objects.**

**Clarification Statement:** Emphasis is on both quantitative and conceptual descriptions of interactions between masses in gravitational fields and electrical charges in electric fields. Example interactions could include two masses experiencing mutually attractive forces, whereas two electric charges may experience attractive or repulsive forces; and doubling the distance between interacting objects yields a decrease in force (by a factor of 4). While these interactions are field force interactions, determination of field strengths is not required. **Assessment Boundary:** Assessment is limited to quantitative and qualitative understandings of systems with two objects, and a qualitative understanding of gravitational and electric fields.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"><li>Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.</li></ul>	<b>Types of Interactions</b> <ul style="list-style-type: none"><li>Newton’s Law of Universal Gravitation and Coulomb’s Law provide the mathematical models to describe and predict the effects of gravitational and electrostatic forces between distant objects.</li><li>Forces at a distance are explained by fields (gravitational, electric, and magnetic) permeating space that can transfer energy through space.</li><li>Magnets or electric currents cause magnetic fields; electric charges or changing magnetic fields cause electric fields.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Different patterns may be observed at each of the scales at which a system is studied and can provide for causality in explanations of phenomena.</li></ul>

**Motion and Stability: Forces and Interactions (PS2)**

**PH.PS2.5 Plan and conduct an investigation to provide evidence that an electric current can produce a magnetic field and that a changing magnetic field can produce an electric current.**

**Clarification Statement:** Students' investigations should describe the data that will be collected and the evidence to be derived from that data. Example investigations could include electromagnets/solenoids, motors, current carrying wires, and compasses. **Assessment Boundary:** Assessment is limited to planning and conducting investigations with provided materials and tools.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements; consider limitations on the precision of the data (e.g., number of trials, cost, risk, time); and refine the design accordingly.</li></ul>	<b>Types of Interactions</b> <ul style="list-style-type: none"><li>Forces at a distance are explained by fields (gravitational, electric, and magnetic) permeating space that can transfer energy through space.</li><li>Magnets or electric currents cause magnetic fields; electric charges or changing magnetic fields cause electric fields.</li></ul> <b>Definitions of Energy</b> <ul style="list-style-type: none"><li>"Electrical energy" may mean energy stored in a battery or energy transmitted by electric currents.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li></ul>

## Oklahoma Academic Standards for Science Physics

### Energy (PS3)

**PH.PS3.1 Create a computational model to calculate the change in the energy of one component in a system when the change in energy of the other component(s) and energy flows in and out of the system are known.**

**Clarification Statement:** Emphasis is on utilizing calculations to understand that energy is transferred in and out of systems and conserved, as well as explaining the meaning of mathematical expressions used in the model. Examples of energy transfer could include the transfer of energy during a collision or heat transfer. **Assessment Boundary:** Assessment is limited to basic algebraic expressions or computations; to systems of two or three components; and to thermal energy, kinetic energy, potential energy, and/or the energies in gravitational, magnetic, or electric fields.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"> <li>Create and/or revise a computational model of a phenomenon, process, or system based on basic assumptions.</li> </ul>	<b>Definitions of Energy</b> <ul style="list-style-type: none"> <li>Energy is a quantitative property of a system that depends on the motion and interactions of matter and radiation within that system. Energy (PS3)		
<b>PH.PS3.2 Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as either motions of particles or energy stored in fields.</b>		
<b>Clarification Statement:</b> Examples of phenomena at the macroscopic scale could include the conversion of kinetic energy to thermal energy, the energy stored due to the position of an object above the earth (considered as stored in fields), and the energy stored between two electrically-charged plates. Examples of models could include diagrams, drawings, descriptions, and computer simulations. <b>Assessment Boundary:</b> Assessment does not include quantitative calculations.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.</li></ul>	<b>Definitions of Energy</b> <ul style="list-style-type: none"><li>Energy is a quantitative property of a system that depends on the motion and interactions of matter and radiation within that system.</li><li>That there is a single quantity called energy is due to the fact that a system's total energy is conserved, even as, within the system, energy is continually transferred from one object to another and between its various possible forms.</li><li>At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy.</li><li>These relationships are better understood at the microscopic scale, at which all of the different manifestations of energy can be modeled as a combination of energy associated with the motion of particles and energy associated with the configuration (relative position of the particles). In some cases, the relative position energy can be thought of as stored in fields (which mediate interactions between particles). This last concept includes radiation, a phenomenon in which energy stored in fields moves across space.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Energy cannot be created or destroyed—only moves between one place and another place, between objects and/or fields, or between systems.</li></ul>

Energy (PS3)		
<b>PH.PS3.3 Design, build, and refine a device that works within given constraints to convert one form of energy into another form of energy.*</b>		
<p><b>Clarification Statement:</b> Emphasis is on both qualitative and quantitative evaluations of devices, such as Rube Goldberg machines, wind turbines, solar cells, solar ovens, and generators. Constraints may include the costs, available materials, required use of renewable energy, efficiency thresholds, and time for construction or operation. <b>Assessment Boundary:</b> Assessment for quantitative evaluations is limited to total output for a given input. Assessment is limited to devices constructed with materials provided to students.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Designing Solutions</b></p> <ul style="list-style-type: none"> <li>Design, evaluate, and/or refine a solution to a complex real-world problem, based on scientific knowledge, student-generated sources of evidence, prioritized criteria, and trade-off considerations.</li> </ul>	<p><b>Definitions of Energy</b></p> <ul style="list-style-type: none"> <li>At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy.</li> </ul> <p><b>Defining and Delimiting an Engineering Problem</b></p> <ul style="list-style-type: none"> <li>Criteria and constraints also include satisfying any requirements set by society, such as taking issues of risk mitigation into account, and they should be quantified to the extent possible and stated in such a way that one can tell if a given design meets them.</li> </ul> <p><b>Influence of Science, Engineering, and Technology on Society and the Natural World</b></p> <ul style="list-style-type: none"> <li>Modern civilization depends on major technological systems. Engineers continuously modify these technological systems by applying scientific knowledge and engineering design practices to increase benefits while decreasing costs and risks.</li> </ul>	<p><b>Energy and Matter</b></p> <ul style="list-style-type: none"> <li>Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

Energy (PS3)		
<b>PH.PS3.4 Plan and conduct an investigation to provide evidence that the transfer of thermal energy between components in a closed system results in a more uniform distribution among the components in the system (second law of thermodynamics).</b>		
<b>Clarification Statement:</b> Emphasis is on analyzing data from student investigations and using mathematical thinking to describe the thermal energy changes both quantitatively and conceptually. Examples of investigations could include mixing liquids at different initial temperatures or adding objects at different temperatures to water. <b>Assessment Boundary:</b> Assessment is limited to investigations based on materials and tools provided to students. Assessment includes both quantitative and conceptual descriptions of energy change.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements; consider limitations on the precision of the data (e.g., number of trials, cost, risk, time) and refine the design accordingly.</li></ul>	<b>Conservation of Energy and Energy Transfer</b> <ul style="list-style-type: none"><li>Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems.</li><li>Uncontrolled systems always evolve toward more stable states-that is, toward more uniform energy distribution (e.g., water flows downhill, objects hotter than their surrounding environment cool down).</li></ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"><li>When investigating or describing a system, the boundaries and initial conditions of the system need to be defined and their inputs and outputs analyzed and described using models.</li></ul>

Energy (PS3)		
<b>PH.PS3.5 Develop and use a model of two objects interacting through electric or magnetic fields to illustrate the forces between objects and the changes in energy of the objects due to the interaction.</b>		
<b>Clarification Statement:</b> Examples of models could include drawings, diagrams, and texts, such as drawings of what happens when two charges of opposite polarity are near each other, including an explanation of how the change in energy of the objects is related to the change in the energy of the field. Examples of electric field phenomena may include volcanic lightning or laser printing and examples of magnetic field phenomena may include a maglev or magnetic braking. <b>Assessment Boundary:</b> Assessment is limited to systems containing two objects.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.</li></ul>	<b>Relationship Between Energy and Forces</b> <ul style="list-style-type: none"><li>When two objects interact, each one exerts a force on the other. These forces can transfer energy between the objects. Forces between two objects at a distance are explained by force fields (gravitational, electric, or magnetic) between them.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Energy cannot be created or destroyed. It only moves between one place to another, between objects and/or fields, or between systems.</li></ul>

Waves and Their Applications in Technologies for Information Transfer (PS4)		
<b>PH.PS4.1 Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media.</b>		
<b>Clarification Statement:</b> Emphasis is on using mathematical relationships (e.g., $v = f\lambda$ ) to understand how various media change the speed of waves. Examples of different media that could be explored include electromagnetic radiation traveling in a vacuum or glass, sound waves traveling through air or water, or seismic waves traveling through Earth. <b>Assessment Boundary:</b> Assessment is limited to algebraic relationships and describing those relationships qualitatively.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"><li>Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.</li></ul>	<b>Wave Properties</b> <ul style="list-style-type: none"><li>The wavelength and frequency of a wave are related to one another by the speed of travel of the wave, which depends on the type of wave and the medium through which it is passing.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li></ul>

Waves and Their Applications in Technologies for Information Transfer (PS4)		
PH.PS4.2 Evaluate questions about the advantages and disadvantages of using digital transmission and storage of information.*		
<p><b>Clarification Statement:</b> Examples of advantages could include that digital information is stable because it can be stored reliably in computer memory, easily duplicated, backed up, and transferred, and copied and shared rapidly. Disadvantages could include issues of data corruption, security, and theft. <b>Assessment Boundary:</b> Assessment is limited to qualitative descriptions.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Asking Questions</b></p> <ul style="list-style-type: none"> <li>Evaluate questions that challenge the premises(s) of an argument, the interpretation of a data set, or the suitability of a design.</li> </ul>	<p><b>Wave Properties</b></p> <ul style="list-style-type: none"> <li>Information can be digitized (e.g., pictures stored as the values of an array of pixels); in this form, it can be stored reliably in computer memory and sent over long distances as a series of wave pulses.</li> </ul> <p><b>Influence of Engineering, Technology, and Science on Society and the Natural World</b></p> <ul style="list-style-type: none"> <li>Modern civilization depends on major technological systems.</li> <li>Engineers continuously modify these technological systems by applying scientific knowledge and engineering design practices to increase benefits while decreasing costs and risks.</li> </ul>	<p><b>Stability and Change</b></p> <ul style="list-style-type: none"> <li>Systems can be designed for greater or lesser stability.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

Waves and Their Applications in Technologies for Information Transfer (PS4)		
<b>PH.PS4.3 Develop an argument for how scientific evidence supports the explanation that electromagnetic radiation can be described either by the wave model or the particle model, and in some situations one model is more useful than the other.</b>		
<b>Clarification Statement:</b> Emphasis is on how the experimental evidence supports the claim and how a theory is generally modified in light of new evidence. Examples of a phenomenon could include resonance, interference, diffraction, and the photoelectric effect. <b>Assessment Boundary:</b> Assessment does not include quantitative analysis of quantum theory.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Evaluate the claims, evidence, and reasoning behind currently accepted explanations or solutions to determine the merits of arguments.</li> </ul>	<b>Wave Properties</b> <ul style="list-style-type: none"> <li>Waves can add or cancel one another as they cross, depending on their relative phase (e.g., relative position of peaks and troughs of the waves), but they emerge unaffected by each other.</li> <li>Boundary: The discussion at this grade level is qualitative only; it can be based on the fact that two sounds can pass a location in different directions without getting mixed up.</li> </ul> <b>Electromagnetic Radiation</b> <ul style="list-style-type: none"> <li>Electromagnetic radiation (e.g., radio, microwaves, light) can be modeled as a wave of changing electric and magnetic fields or as particles called photons. The wave model is useful for explaining many features of electromagnetic radiation, and the particle model explains other features.</li> </ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"> <li>Models (e.g., physical, mathematical, computer) can be used to simulate systems and interactions, including energy, matter, and information flow within and between systems at different scales.</li> </ul>
Connections to Scientific Literacy		
<b>Science Models, Laws, and Theories Explain Natural Phenomena</b> <ul style="list-style-type: none"> <li>A scientific theory is a substantiated explanation of some aspect of the natural world, based on a body of facts that have been repeatedly confirmed through observation and experiment and the science community validates each theory before it is accepted. If new evidence is discovered that the theory does not accommodate, the theory is generally modified in light of this new evidence.</li> </ul>		

**Waves and Their Applications in Technologies for Information Transfer (PS4)**

**PH.PS4.4 Evaluate the validity and reliability of claims in published materials of the effects that different frequencies of electromagnetic radiation have when absorbed by matter.**

**Clarification Statement:** Emphasis is on the idea that different frequencies of electromagnetic radiation have different energies, and the damage to living tissue depends on the energy of the radiation. Examples of published materials could include peer-reviewed scientific articles, or trade books, magazines, web resources, videos, and other passages that may reflect bias. **Assessment Boundary:** Assessment is limited to qualitative descriptions.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"><li>Evaluate the validity and reliability of and/or synthesize multiple claims, methods, and/or designs that appear in scientific and technical texts or media reports, verifying the data when possible.</li></ul>	<b>Electromagnetic Radiation</b> <ul style="list-style-type: none"><li>When light or longer wavelength electromagnetic radiation is absorbed in matter, it is generally converted into thermal energy (heat).</li><li>Shorter wavelength electromagnetic radiation (ultraviolet, X-rays, gamma rays) can ionize atoms and cause damage to living cells.</li><li>Photoelectric materials emit electrons when they absorb light of high enough frequency.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Cause and effect relationships can be suggested and predicted for complex natural and human-designed systems by examining what is known about smaller scale mechanisms within the system.</li></ul>

## Oklahoma Academic Standards for Science Biology

### Ecosystems: Interactions, Energy, and Dynamics (LS2)

#### B.LS2.8 Evaluate evidence for the role of group behavior on individual and species' chances to survive and reproduce.

**Clarification Statement:** Emphasis is on analyzing evidence of the effects (both positive and negative) of grouping behaviors (e.g., flocking, schooling, herding) and cooperative behaviors (e.g., hunting, migrating, swarming) on survival and reproduction. **Assessment Boundary:** The assessment should provide evidence of students' abilities to: (1) distinguish between group versus individual behavior, (2) identify evidence supporting the outcomes of group behavior, and (3) develop logical and reasonable arguments based on evidence.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"><li>Evaluate the claims, evidence, and/or reasoning behind currently accepted explanations or solutions to determine the merit of arguments.</li></ul>	<b>Social Interactions and Group Behavior</b> <ul style="list-style-type: none"><li>Group behavior has evolved because membership can increase the chances of survival for individuals and their genetic relatives.</li><li>Some animals have a strong drive for social affiliation with members of their own species and will suffer, behaviorally as well as physiologically, if reared in isolation, even if all of their physical needs are met.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li></ul>
<b>Connections to Scientific Literacy</b>		
<b>Scientific Knowledge is Open to Revision in Light of New Evidence</b> <ul style="list-style-type: none"><li>Scientific argumentation is a mode of logical discourse used to clarify the strength of relationships between ideas and evidence that may result in revision of an explanation.</li></ul>		

# Oklahoma Academic Standards for Science Biology

## Heredity: Inheritance and Variation of Traits (LS3)

**B.LS3.1 Ask questions to clarify relationships about the role of DNA and chromosomes in coding the instructions for characteristic traits passed from parents to offspring.**

**Clarification Statement:** Emphasis is on the formulation of questions about how DNA and chromosomes function in the inheritance of traits, focusing on the relationship between DNA sequences, genes, proteins, and the resulting observable traits. **Assessment Boundary:** Assessment does not include the phases of meiosis or the biochemical mechanism of specific steps in the process.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Asking Questions</b> <ul style="list-style-type: none"> <li>Ask questions that arise from examining models or a theory, to clarify and/or seek additional information and relationships.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>All cells contain genetic information in the form of DNA molecules.</li> <li>Genes are regions in the DNA that contain the instructions that code for the formation of proteins, which carry out most of the work of the cells.</li> </ul> <b>Inheritance of Traits</b> <ul style="list-style-type: none"> <li>Each chromosome consists of a single, very long DNA molecule, and each gene on the chromosome is a particular segment of that DNA.</li> <li>The instructions for forming species' characteristics are carried in DNA. All cells in an organism have the same genetic content, but the genes used (expressed) by the cell may be regulated in different ways.</li> <li>Not all DNA codes for protein; some segments of DNA are involved in regulatory or structural functions, and some have no, as of yet, known functions.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li> </ul>

## Oklahoma Academic Standards for Science Biology

### Heredity: Inheritance and Variation of Traits (LS3)

**B.LS3.2 Make and defend a claim based on evidence that inheritable genetic variations may result from (1) new genetic combinations through meiosis, (2) viable error occurring during replication, and/or (3) mutations caused by environmental factors.**

**Clarification Statement:** Emphasis is on using data to support arguments for the way genetic variation occurs. **Assessment Boundary:** Assessment does not include the phases of meiosis or the biochemical mechanisms of specific steps in the process.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"><li>Make and defend a claim based on evidence about the natural world or the effectiveness of a design solution that reflects scientific knowledge and student-generated evidence.</li></ul>	<b>Variation of Traits</b> <ul style="list-style-type: none"><li>In sexual reproduction, chromosomes can sometimes swap sections during the process of meiosis (cell division), thereby creating new genetic combinations and thus more genetic variation.</li><li>Although DNA replication is tightly regulated and remarkably accurate, errors do occur and result in mutations, which also cause mutations in genes, and variables in mutations are also inherited.</li><li>Environmental factors also affect expression of traits, and hence affect the probability of occurrences of traits in the population; thus, the variation and distribution of traits observed depends on both genetic and environmental factors.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li></ul>

**Heredity: Inheritance and Variation of Traits (LS3)**

**B.LS3.3 Apply concepts of statistics and probability to explain the variation and distribution of expressed traits in a population.**

**Clarification Statement:** Emphasis is on distribution and variation of traits in a population and the use of mathematics (e.g., calculations of frequencies based on data from Punnett squares, graphical representations, conceptual understanding of Hardy-Weinberg equilibrium) to describe the distribution of traits in a population, not individuals. **Assessment Boundary:** Emphasis is on using evidence from data and/or simulations to explain population-level patterns of trait distribution. Assessment does not include Hardy-Weinberg calculations.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"><li>Apply concepts of statistics and probability (including determining function fits to data, slope, intercept, and correlation coefficient for linear fits) to scientific questions and problems, using digital tools when feasible.</li></ul>	<b>Variation of Traits</b> <ul style="list-style-type: none"><li>Environmental factors also affect expression of traits, and hence affect the probability of occurrences of traits in the population; thus, the variation and distribution of traits observed depends on both genetic and environmental factors.</li></ul>	<b>Scale, Proportion, and Quantity</b> <ul style="list-style-type: none"><li>Algebraic thinking is used to examine scientific data and predict the effect of a change in one variable on another (e.g., linear growth vs. exponential growth).</li></ul>

# Oklahoma Academic Standards for Science Biology

## Biological Unity and Diversity (LS4)

**B.LS4.1 Communicate scientific information that common ancestry and biological evolution are supported by multiple lines of empirical evidence.**

**Clarification Statement:** Emphasis is on a conceptual understanding of the role each line of evidence has relating to common ancestry and biological evolution. Examples of evidence should include similarities in DNA and amino acid sequences, but could also include fossil record, anatomical structures, and the order of appearance of structures in embryological development. **Assessment Boundary:** Emphasis is on students' abilities to use evidence such as DNA and amino acid sequences, cladograms, analogous/homologous structures, and fossil records to communicate their understanding of common ancestry and biological evolution.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"> <li>Communicate scientific information (e.g., about phenomena) in multiple formats (including orally, graphically, textually, and mathematically).</li> </ul>	<b>Evidence of Common Ancestry and Diversity</b> <ul style="list-style-type: none"> <li>Genetic information provides evidence of common ancestry and diversity. DNA sequences vary among species, but there are many overlaps; in fact, the ongoing branching that produces multiple lines of descent can be inferred by comparing the DNA sequences of different organisms. Such information is also derivable from the similarities and differences in amino acid sequences and from anatomical and embryological evidence.</li> </ul> <b>Adaptation</b> <ul style="list-style-type: none"> <li>Evolution is a consequence of the interaction of four factors: (1) the potential for a species to increase in number, (2) the genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for an environment's limited supply of the resources that individuals need in order to survive and reproduce, and (4) the ensuing proliferation of those organisms that are better able to survive and reproduce in that environment.</li> </ul>	<b>Patterns</b> <ul style="list-style-type: none"> <li>Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena.</li> </ul>

## Connections to Scientific Literacy

### Science Models, Laws, and Theories Explain Natural Phenomena

- A scientific theory is a substantiated explanation of some aspect of the natural world, based on a body of facts that have been repeatedly confirmed through observation and experiment, and the science community validates each theory before it is accepted. If new evidence is discovered that the theory does not accommodate, the theory is generally modified in light of this new evidence.

Biological Unity and Diversity (LS4)

**B.LS4.2 Construct an explanation based on evidence that biological diversity is influenced by (1) the potential for a species to increase in number, (2) the heritable genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for limited resources, and (4) the proliferation of those organisms that are better able to survive and reproduce in the environment.**

**Clarification Statement:** Emphasis is on using evidence to explain the influence each of the four factors has on the number of organisms, behaviors, morphology, or physiology in terms of ability to survive and reproduce. Examples of evidence could include mathematical models such as simple distribution graphs and comparisons that show how changes in one factor can impact another. **Assessment Boundary:** Assessment does not include genetic drift, gene flow through migration, and co-evolution.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"><li>Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.</li></ul>	<b>Natural Selection</b> <ul style="list-style-type: none"><li>Natural selection occurs only if there is both (1) variation in the genetic information between organisms in a population and (2) variation in the expression of that genetic information—that is, trait variation— that leads to differences in performance among individuals.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li></ul>

Biological Unity and Diversity (LS4)

**B.LS4.3 Apply concepts of statistics and probability to support explanations that organisms with an advantageous heritable trait tend to increase in proportion to organisms lacking this trait.**

**Clarification Statement:** Emphasis is on analyzing shifts in numerical distribution of traits and using these shifts as evidence to support explanations for adaptations. **Assessment Boundary:** Emphasis is on students' abilities to analyze shifts in numerical distribution of traits as evidence to support explanations. Analysis is limited to basic statistical and graphical analysis, not allele or gene frequency calculations.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"> <li>Apply concepts of statistics and probability (including determining function fits to data, slope, intercept, and correlation coefficient for linear fits) to scientific and engineering questions and problems, using digital tools when feasible.</li> </ul>	<b>Natural Selection</b> <ul style="list-style-type: none"> <li>Natural selection occurs only if there is both (1) variation in the genetic information between organisms in a population and (2) variation in the expression of that genetic information—that is, trait variation—that leads to differences in performance among individuals.</li> <li>The traits that positively affect survival are more likely to be reproduced, and thus are more common in the population.</li> </ul> <b>Adaptation</b> <ul style="list-style-type: none"> <li>Natural selection leads to adaptation, that is, to a population dominated by organisms that are anatomically, behaviorally, and physiologically well suited to survive and reproduce in a specific environment. That is, the differential survival and reproduction of organisms in a population that have an advantageous heritable trait leads to an increase in the proportion of individuals in future generations that have the trait and to a decrease in the proportion of individuals that do not.</li> <li>Adaptation also means that the distribution of traits in a population can change when conditions change.</li> </ul>	<b>Patterns</b> <ul style="list-style-type: none"> <li>Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations and phenomena.</li> </ul>

# Oklahoma Academic Standards for Science Biology

## Biological Unity and Diversity (LS4)

### B.LS4.4 Construct an explanation based on evidence for how natural selection leads to adaptation of populations.

**Clarification Statement:** Emphasis is on using data to provide evidence for how specific biotic and abiotic differences in ecosystems (such as ranges of seasonal temperature, long-term climate change, acidity, light, geographic barriers, or adaptation of other organisms) contribute to a change in gene frequency over time, leading to adaptation of populations. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"> <li>Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.</li> </ul>	<b>Adaptation</b> <ul style="list-style-type: none"> <li>Natural selection leads to adaptation, that is, to a population dominated by organisms that are anatomically, behaviorally, and physiologically well suited to survive and reproduce in a specific environment.</li> <li>That is, the differential survival and reproduction of organisms in a population that have an advantageous heritable trait leads to an increase in the proportion of individuals in future generations that have the trait and to a decrease in the proportion of individuals that do not.</li> <li>Changes in the physical environment, whether naturally occurring or human induced, have thus contributed to the expansion of some species, the emergence of new distinct species as populations diverge under different conditions, and the decline—and sometimes the extinction—of some species.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li> </ul>

## Connections to Scientific Literacy

### Scientific Knowledge Assumes an Order and Consistency in Natural Systems

- Scientific knowledge is based on the assumption that natural laws operate today as they did in the past and they will continue to do so in the future.

## Oklahoma Academic Standards for Science Biology

### Biological Unity and Diversity (LS4)

**B.LS4.5 Evaluate the evidence supporting claims that changes in environmental conditions may result in (1) increases in the number of individuals of some species, (2) the emergence of new species over time, and (3) the extinction of other species.**

**Clarification Statement:** Emphasis is on determining cause and effect relationships for how changes to the environment such as deforestation, fishing, application of fertilizers, drought, flood, and the rate of change of the environment affect distribution or disappearance of traits in species.

**Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts

## Earth Systems (ESS2)

**EN.ESS2.4 Analyze and interpret data to explore how variations in the flow of energy into and out of Earth's systems cause changes to the atmosphere and climate.**

**Clarification Statement:** Changes differ by timescale, from sudden (large volcanic eruption, ocean circulation), to intermediate (ocean circulation, solar output, human activity), and long-term (Earth's orbit and the orientation of its axis and changes in atmospheric composition). Examples of human activities could include fossil fuel combustion, cement production, or agricultural activity and natural processes such as changes in incoming solar radiation or volcanic activity. Examples of data can include tables, graphs, maps of global and regional temperatures, and atmospheric levels of gases. **Assessment Boundary:** N/A

## Earth Systems (ESS2)

**EN.ESS2.7 Engage in argument from evidence for how the simultaneous co-evolution of Earth's systems and life on Earth led to periods of stability and change over geologic time.**

**Clarification Statement:** Emphasis is on the dynamic causes, effects, and feedbacks between the biosphere and Earth's other systems, whereby geoscience factors influence conditions for life, which in turn continuously alters Earth's surface. Examples include how photosynthetic life altered the atmosphere through the production of oxygen, which in turn increased weathering rates and affected animal life; how microbial life on land increased the formation of soil, which in turn allowed for the development of land plant species; or how the changes in coral species created reefs that altered patterns of erosion and deposition along coastlines and provided habitats to support biodiversity. Geologic time scale should be considered with the emphasis above. **Assessment Boundary:** Assessment does not include a comprehensive understanding of the mechanisms of how the biosphere interacts with all of Earth's other systems.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts

### Connections to Scientific Literacy

#### Science Models, Laws, and Theories Explain Natural Phenomena

- A scientific theory is a substantiated explanation of some aspect of the natural world, based on a body of facts that have been repeatedly confirmed through observation and experiment and the science community validates each theory before it is accepted. If new evidence is discovered that the theory does not accommodate, the theory is generally modified in light of this new evidence.

#### Scientific Knowledge Assumes an Order and Consistency in Natural Systems

- Scientific knowledge is based on the assumption that natural laws operate today as they did in the past and they will continue to do so in the future.
- Science assumes the universe is a vast single system in which basic laws are consistent.

Earth's Place in the Universe (ESS1)

ES.ESS1.3 Construct an explanation about the process that causes stars to produce elements throughout their life cycle.

**Clarification Statement:** Emphasis is on the way the different elements formed, depending on the mass of a star and the stage of its life. Evidence could include stellar spectra, models of nucleosynthesis, and observations of stars of different ages and masses (e.g., H-R diagrams and stellar classification). **Assessment Boundary:** Details of the many different nucleosynthesis pathways for stars of different masses are not assessed.

Earth Systems (ESS2)		
<b>ES.ESS2.7 Engage in argument from evidence for how the simultaneous co-evolution of Earth's systems and life on Earth led to periods of stability and change over geologic time.</b>		
<p><b>Clarification Statement:</b> Emphasis is on the dynamic causes, effects, and feedbacks between the biosphere and Earth's other systems, whereby geoscience factors influence conditions for life, which in turn continuously alters Earth's surface. Examples include how photosynthetic life altered the atmosphere through the production of oxygen, which in turn increased weathering rates and affected animal life; how microbial life on land increased the formation of soil, which in turn allowed for the development of land plant species; or how the changes in coral species created reefs that altered patterns of erosion and deposition along coastlines and provided habitats to support biodiversity. Geologic time scale should be considered with the emphasis above. <b>Assessment Boundary:</b> Assessment does not include a comprehensive understanding of the mechanisms of how the biosphere interacts with all of Earth's other systems.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Engaging in Argument from Evidence</b></p> <ul style="list-style-type: none"> <li>Construct an oral and written argument or counter-argument based on data and evidence.</li> </ul>	<p><b>Weather and Climate</b></p> <ul style="list-style-type: none"> <li>Gradual atmospheric changes were due to plants and other organisms that captured carbon dioxide and released oxygen.</li> </ul> <p><b>Biogeology</b></p> <ul style="list-style-type: none"> <li>The many dynamic and delicate feedback mechanisms between the biosphere and other Earth systems cause a continual co-evolution of Earth's surface and the life that exists on it.</li> </ul>	<p><b>Stability and Change</b></p> <ul style="list-style-type: none"> <li>Much of science deals with constructing explanations of how things change and how they remain stable.</li> </ul>

Earth and Human Activities (ESS3)

**ES.ESS3.1 Construct an explanation based on evidence for how the availability of natural resources, occurrences of natural hazards, and changes in climate affect human activity.**

**Clarification Statement:** Examples of key natural resources could include access to fresh water (e.g., rivers, lakes, and groundwater), regions of fertile soils (e.g., river deltas), and high concentrations of minerals and fossil fuels. Examples of natural hazards could be from interior processes (e.g., volcanic eruptions, earthquakes), surface processes (e.g., tsunamis, landslides, mudslides, soil erosion), and severe weather (e.g., hurricanes, floods, droughts). Natural hazards and other geologic events exhibit some non-random patterns of occurrence. Examples of the results of changes in climate that can affect populations or drive mass migrations could include changes to sea level, regional patterns of temperature and precipitation, and the types of crops and livestock that can be raised. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Constructing Explanations</b> <ul style="list-style-type: none"> <li>Construct an explanation based on valid and reliable evidence obtained from a variety of sources (including students' own investigations, models, theories, simulations, peer review) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.</li> </ul>	<b>Natural Resources</b> <ul style="list-style-type: none"> <li>Resource availability has guided the development of human society.</li> </ul> <b>Natural Hazards</b> <ul style="list-style-type: none"> <li>Natural hazards and other geologic events have shaped the course of human history; they have significantly altered the sizes of human populations and have driven human migrations.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li> </ul>

**Earth and Human Activities (ESS3)**

**ES.ESS3.2 Evaluate competing design solutions for developing, managing, and utilizing energy and mineral resources based on cost-benefit ratios on large and small scales.\***

**Clarification Statement:** Emphasis is on the conservation, recycling, and reuse of resources (such as minerals and metals) where possible, and on minimizing impacts where it is not. Examples of large-scale solutions include developing best practices for agriculture; soil use; forestry; mining; and production of conventional, unconventional, or renewable energy resources. Examples of small-scale solutions could include mulching lawn clippings or adding biomass to gardens. **Assessment Boundary:** N/A

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"> <li>Evaluate competing design solutions to a real-world problem based on scientific ideas and principles, empirical evidence, and logical arguments regarding relevant factors (e.g. economic, societal, environmental, ethical considerations).</li> </ul>	<b>Natural Resources</b> <ul style="list-style-type: none"> <li>All forms of energy production and other resource extraction have associated economic, social, environmental, and geopolitical costs and risks as well as benefits. Aeronautics (AR)		
Matter and Its Interactions (PS1)		
<b>AR.PS1.3 Plan and conduct an investigation to compare the structure of substances at the macroscopic scale to infer the strength of electrical forces between particles.</b>		
<b>Clarification Statement:</b> Emphasis is on understanding the relative strengths of forces between particles and how those forces contribute to macroscopic properties of materials (e.g., melting point, vapor pressure, surface tension). Investigations could include comparing structure and properties of materials (e.g., metals, plastics, composites) used in aircraft construction to better understand how these materials influence aircraft performance, safety, and regulatory compliance (e.g., meeting FAA standards and regulations). Safety considerations could include how material defects (e.g., cracks, corrosion, fatigue) affect structural integrity of an aircraft. <b>Assessment Boundary:</b> Investigations should focus on observable characteristics and the relationship between material structure and bulk properties. Assessment can include simplified examples of aircraft construction and regulatory standards related to material performance and safety.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"><li>Plan and conduct an investigation individually and collaboratively to produce data to serve as the basis for evidence, and in the design: decide on types, how much, and accuracy of data needed to produce reliable measurements; consider limitations on the precision of the data (e.g., number of trials, cost, risk, time); and refine the design accordingly.</li></ul>	<b>Structure and Properties of Matter</b> <ul style="list-style-type: none"><li>The structure and interactions of matter at the macroscopic scale are determined by electrical forces within and between atoms.</li></ul>	<b>Structure and Function</b> <ul style="list-style-type: none"><li>The functions and properties of natural and designed objects and systems can be inferred from their overall structure, the way their components are shaped and used, and the molecular substructures of its various materials.</li></ul>

Aeronautics (AR)		
Motion and Stability: Forces and Interactions (PS2)		
<b>AR.PS2.1</b> Analyze and interpret data to support the claim that Newton’s second law of motion describes the mathematical relationship among the mass, acceleration, and net force acting on macroscopic objects.		
<b>Clarification Statement:</b> Emphasis is on the forces acting on an aircraft (e.g., lift, weight, thrust, drag), and using Newton’s second law to qualitatively describe and quantify the relationship between these forces, the mass of the aircraft, and its resulting acceleration. Example data for analysis could include different flight scenarios (e.g., takeoff, cruise, landing) and varying parameters such as airspeed, altitude, and aircraft design. <b>Assessment Boundary:</b> Assessment does not include complex aerodynamic calculations, advanced fluid dynamics, or three-dimensional vector analysis. Assessment can include simplified scenarios (e.g., steady acceleration during takeoff) with provided parameters.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"> <li>Analyze data using tools, technologies, and/or models (e.g., computations, mathematical) in order to make valid and reliable scientific claims or determine an optimal design solution.</li> </ul>	<b>Forces and Motion</b> <ul style="list-style-type: none"> <li>Newton’s Second Law accurately predicts changes in the motion of macroscopic objects.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li> </ul>

Aeronautics (AR)		
Energy (PS3)		
<b>AR.PS3.5 Develop and use a model of two objects interacting through electric or magnetic fields to illustrate the forces between objects and the changes in energy of the objects due to the interaction.</b>		
<b>Clarification Statement:</b> Emphasis is on using models to illustrate how electric or magnetic fields influence forces between objects in the context of aviation technologies (e.g., magnetic fields in avionics systems). Models could be used to show how these interactions contribute to the operation of aircraft systems (e.g., electric propulsion, communication). Models could include diagrams, simulations, or mathematical representations. <b>Assessment Boundary:</b> Assessment should focus on understanding the basic principles of electric and magnetic fields in relation to the forces they produce and how those forces impact aviation systems.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop, revise, and/or use a model based on evidence to illustrate and/or predict the relationships between systems or between components of a system.</li></ul>	<b>Relationship Between Energy and Forces</b> <ul style="list-style-type: none"><li>When two objects interact, each one exerts a force on the other. These forces can transfer energy between the objects. Forces between two objects at a distance are explained by force fields (gravitational, electric, or magnetic) between them.</li></ul>	<b>Energy and Matter</b> <ul style="list-style-type: none"><li>Energy cannot be created or destroyed. It only moves between one place to another, between objects and/or fields, or between systems.</li></ul>

Aeronautics (AR)		
Waves and their Applications in Technology for Information Transfer (PS4)		
<b>AR.PS4.1 Use mathematical representations to support a claim regarding relationships among the frequency, wavelength, and speed of waves traveling in various media.</b>		
<b>Clarification Statement:</b> Emphasis is on using mathematical relationships (e.g., $v = f\lambda$ ) to understand how various media change the speed of waves, particularly those used in communication and navigation systems (e.g., radar systems). <b>Assessment Boundary:</b> Assessment is limited to algebraic relationships and describing those relationships qualitatively.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Mathematics and Computational Thinking</b> <ul style="list-style-type: none"><li>Use mathematical, computational, and/or algorithmic representations of phenomena or design solutions to describe and/or support claims and/or explanations.</li></ul>	<b>Wave Properties</b> <ul style="list-style-type: none"><li>The wavelength and frequency of a wave are related to one another by the speed of travel of the wave, which depends on the type of wave and the medium through which it is passing.</li></ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"><li>Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</li></ul>

Aeronautics (AR)		
Waves and their Applications in Technology for Information Transfer (PS4)		
<b>AR.PS4.3</b> Develop an argument for how scientific evidence supports the explanation that electromagnetic radiation can be described either by a wave model or the particle model, and in some situations one model is more useful than the other.		
<b>Clarification Statement:</b> Emphasis is on understanding the strengths and limitations of each model for practical aviation navigation applications. For example, the wave model helps in understanding interference patterns and shielding techniques (e.g., radar systems), while the particle model is useful in understanding the interaction of high-energy particles with electronic components (e.g., optical fibers, laser communication systems). <b>Assessment Boundary:</b> Assessment is limited to qualitative descriptions and conceptual understanding of how each model applies to different situations.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"><li>Construct, use, and/or present an oral and written argument or counter arguments based on data and evidence.</li></ul>	<b>Wave Properties</b> <ul style="list-style-type: none"><li>Waves can add or cancel one another as they cross, depending on their relative phase (i.e., relative position of peaks and troughs of the waves), but they emerge unaffected by each other.</li></ul> <b>Electromagnetic Radiation</b> <ul style="list-style-type: none"><li>Electromagnetic radiation (e.g., radio, microwaves, light) can be modeled as a wave of changing electric and magnetic fields or as particles called photons.</li><li>The wave model is useful for explaining many features of electromagnetic radiation, and the particle model explains other features.</li></ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"><li>Models (e.g., physical, mathematical, computer) can be used to simulate systems and interactions (including energy, matter, and information flows) within and between systems at different scales.</li></ul>
Connections to Scientific Literacy		
<b>Science Models, Laws, and Theories Explain Natural Phenomena</b> <ul style="list-style-type: none"><li>A scientific theory is a substantiated explanation of some aspect of the natural world, based on a body of facts that have been repeatedly confirmed through observation and experiment and the science community validates each theory before it is accepted. If new evidence is discovered that the theory does not accommodate, the theory is generally modified in light of this new evidence.</li></ul>		

Aeronautics (AR)		
Waves and their Applications in Technology for Information Transfer (PS4)		
<b>AR.PS4.5 Communicate technical information about how some technological devices use the principles of wave behavior and wave interactions with matter to transmit and capture information and energy.*</b>		
<b>Clarification Statement:</b> Emphasis is on aircraft communication systems that use technological devices such as radar and lidar systems, GPS and satellite communications, weather detection and monitoring, and instrumentation (e.g., altimeters, transponders). <b>Assessment Boundary:</b> Assessment is limited to qualitative information.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Obtaining, Evaluating, and Communicating Information</b> <ul style="list-style-type: none"> <li>Communicate scientific and/or technical information (e.g., about phenomena and/or the process of development and the design and performance of a proposed process or system) in multiple formats (including orally, graphically, textually, and mathematically).</li> </ul>	<b>Wave Properties</b> <ul style="list-style-type: none"> <li>Information can be digitized (e.g., a picture stored as the values of an array of pixels); in this form, it can be stored reliably in computer memory and sent over long distances as a series of wave pulses.</li> </ul> <b>Electromagnetic Radiation</b> <ul style="list-style-type: none"> <li>Photoelectric materials emit electrons when they absorb light of high enough frequency.</li> </ul> <b>Information Technologies and Instrumentation</b> <ul style="list-style-type: none"> <li>Multiple technologies based on the understanding of waves and their interactions with matter are part of everyday experiences in the modern world (e.g., medical imaging, communications, scanners) and in scientific research. They are essential tools for producing, transmitting, and capturing signals and for storing and interpreting the information contained in them.</li> </ul> <b>Interdependence of Science, Engineering, and Technology</b> <ul style="list-style-type: none"> <li>Modern civilization depends on major technological systems.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Cause and effect relationships can be suggested and predicted for complex natural and human designed systems by examining what is known about smaller scale mechanisms within the system.</li> </ul>

\*This standard emphasizes engineering skills or ideas.

Aeronautics (AR)		
Engineering Design (ETS1)		
<b>AR.ETS1.1 Analyze a major global challenge to specify qualitative and quantitative criteria and constraints for solutions that account for societal needs and wants.</b>		
<b>Clarification Statement:</b> Global aviation challenges could include reducing aircraft emissions, improving air traffic management, enhancing aircraft safety, and developing sustainable aviation technologies. <b>Assessment Boundary:</b> Assessment focuses on how students apply basic principles of system design and problem-solving to identify qualitative and quantitative criteria and constraints for a solution.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Defining Problems</b> <ul style="list-style-type: none"> <li>Analyze complex real-world problems by specifying criteria and constraints for successful solutions.</li> </ul>	<b>Defining and Delimiting Engineering Problems</b> <ul style="list-style-type: none"> <li>Criteria and constraints also include satisfying any requirements set by society, such as taking issues of risk mitigation into account, and they should be quantified to the extent possible and stated in such a way that one can tell if a given design meets them.</li> <li>Humanity faces major global challenges today, such as the need for supplies of clean water and food, which can be addressed through engineering. KINDERGARTEN - GRADE 2 (K2)

Engineering Design (ETS1)

**K2.ETS1.1 Ask questions, make observations, and gather information about a situation people want to change to define a simple problem that can be solved through the development of a new or improved object or tool.**

**Clarification Statement:** Simple problems can include local community needs. For example, better bandages for people who get hurt (biomedical engineering) or making buildings stronger against storms (civil engineering). **Assessment Boundary:** Questions, observations, and information gathering are focused on a given situation that people wish to change, why people want the situation to change, and the desired outcome of changing the situation.

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Asking Questions and Defining Problems</b> <ul style="list-style-type: none"> <li>Define a simple problem that can be solved through the development of a new or improved object or tool.</li> </ul>	<b>Defining and Delimiting Engineering Problems</b> <ul style="list-style-type: none"> <li>A situation that people want to change or create can be approached as a problem to be solved through engineering.</li> <li>Asking questions, making observations, and gathering information are helpful in thinking about problems.</li> <li>Before beginning to design a solution, it is important to clearly understand the problem.</li> </ul>	<b>Cause and Effect</b> <ul style="list-style-type: none"> <li>Events have causes that generate observable patterns.</li> </ul>

KINDERGARTEN - GRADE 2 (K2)

Engineering Design (ETS1)

**K2.ETS1.2 Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem.**

**Clarification Statement:** Sketches, drawings, and physical models help show the relationship between an object's form and its purpose. For example, a bridge model that spans a gap while maintaining stability, a boat that floats based on its shape, or a better utensil for eating various types of food. **Assessment Boundary:** Assessment is limited to identifying relationships between the components in the sketchings, drawings, or physical models (e.g., the shape(s) of the object and the object's function, and the object and the problem it is designed to solve).

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop a simple model based on evidence to represent a proposed object or tool.</li></ul>	<b>Developing Possible Solutions</b> <ul style="list-style-type: none"><li>Designs can be conveyed through sketches, drawings, or physical models. These representations are useful in communicating ideas for a problem's solutions to other people.</li></ul>	<b>Structure and Function</b> <ul style="list-style-type: none"><li>The shape and stability of structures for natural and designed objects are related to their function(s).</li></ul>

KINDERGARTEN - GRADE 2 (K2)

Engineering Design (ETS1)

**K2.ETS1.3 Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs.**

**Clarification Statement:** With guidance, students can use graphical displays (e.g., tables, pictographs, line plots) to organize given data from testing two different objects, including data about the features and relative performance of each solution. **Assessment Boundary:** Patterns in data could include how each of the objects performed, relative to the other object and the intended performance, or how various features (e.g., shape, thickness) of the objects relate to their performance (e.g., speed, strength).

Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"><li>Analyze data from tests of an object or tool to determine if it works as intended.</li></ul>	<b>Optimizing the Design Solution</b> <ul style="list-style-type: none"><li>Because there is always more than one possible solution to a problem, it is useful to compare and test designs</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Patterns in the natural and human designed world can be observed, used to describe phenomena, and used as evidence.</li></ul>

Grade 3 - Grade 5 (G35)		
Engineering Design (ETS1)		
<b>G35.ETS1.1 Define a simple design problem reflecting a need or want that includes specified criteria for success and constraints on materials, time, or cost.</b>		
<p><b>Clarification Statement:</b> The simple design problem should be able to be solved with the development of a new or improved object, tool, process, or system (e.g., a bird feeder for specific types of birds, desk organizers to keep the classroom picked up). Example criteria for success could include the object reaching the target intact, and example constraints could include the available materials, time limits, and budget restrictions.</p> <p><b>Assessment Boundary:</b> Assessment is limited to defining problems that are simple and tangible, focusing on everyday needs or wants that students can easily relate to. The use of specialized tools and materials are not required.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Asking Questions and Defining Problems</b> <ul style="list-style-type: none"> <li>Define a simple design problem that can be solved through the development of an object, tool, process, or system, and includes several criteria for success and constraints on materials, time, or cost.</li> </ul>	<b>Defining and Delimiting Engineering Problems</b> <ul style="list-style-type: none"> <li>Possible solutions to a problem are limited by available materials and resources (e.g., constraints). The success of a designed solution is determined by considering the desired features of a solution (e.g., criteria). Different proposals for solutions can be compared on the basis of how well each one meets the specified criteria for success or how well each takes the constraints into account.</li> </ul> <b>Influence of Science, Engineering, and Technology on Society and the Natural World</b> <ul style="list-style-type: none"> <li>People's needs and wants change over time, as do their demands for new and improved technologies.</li> </ul>	<b>Structure and Function</b> <ul style="list-style-type: none"> <li>The shape and stability of structures of natural and designed objects are related to their function(s).</li> </ul>

Grade 3 - Grade 5 (G35)		
Engineering Design (ETS1)		
<b>G35.ETS1.2 Generate and compare multiple possible solutions to a problem based on how well each is likely to meet the criteria and constraints of the problem.</b>		
<p><b>Clarification Statement:</b> Appropriate information about a problem could include the causes and effects of the problem, required features, and limits for solutions (e.g., increasing benefits, decreasing risks/costs, and meeting societal demands). <b>Assessment Boundary:</b> Comparisons should focus on qualitative observations (e.g., durability, ease of use, effectiveness) rather than detailed quantitative analyses or advanced optimization techniques.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<p><b>Designing Solutions</b></p> <ul style="list-style-type: none"> <li>Generate and compare multiple solutions to a problem based on how well they meet the criteria and constraints of the design problem.</li> </ul>	<p><b>Developing Possible Solutions</b></p> <ul style="list-style-type: none"> <li>Research on a problem should be carried out before beginning to design a solution. Testing a solution involves investigating how well it performs under a range of likely conditions.</li> <li>Communicating with peers about proposed solutions is an important part of the design process, and shared ideas can lead to improved designs.</li> </ul> <p><b>Influence of Science, Engineering, and Technology on Society and the Natural World</b></p> <ul style="list-style-type: none"> <li>Engineers improve existing technologies or develop new ones to increase their benefits, decrease known risks, and meet societal demands.</li> </ul>	<p><b>Structure and Function</b></p> <ul style="list-style-type: none"> <li>Substructures have shapes and parts that serve functions.</li> </ul>

Grade 3 - Grade 5 (G35)		
Engineering Design (ETS1)		
<b>G35.ETS1.3 Plan and carry out fair tests in which variables are controlled and failure points are considered to identify aspects of a model or prototype that can be improved.</b>		
<p><b>Clarification Statement:</b> Fair tests are experiments where only one variable is changed and all other conditions are kept the same to ensure accurate and reliable results (e.g., how changes to one variable affects the stability or performance of a prototype or model). Example variables could include material types or size. Emphasis is on understanding the concept of fair testing and recognizing potential failure points for improvement. <b>Assessment Boundary:</b> Assessment is limited to only one variable being changed at a time.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Planning and Carrying Out Investigations</b> <ul style="list-style-type: none"> <li>Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence, using fair tests in which variables are controlled and the number of trials considered.</li> </ul>	<b>Developing Possible Solutions</b> <ul style="list-style-type: none"> <li>Tests are often designed to identify failure points or difficulties, which suggest the elements of the design that need to be improved.</li> </ul> <b>Optimizing the Design Solution</b> <ul style="list-style-type: none"> <li>Different solutions need to be tested in order to determine which of them best solves the problem, given the criteria and the constraints.</li> </ul>	<b>Stability and Change</b> <ul style="list-style-type: none"> <li>Change is measured in terms of differences over time and may occur at different rates.</li> </ul>

Middle School (MS)		
Engineering Design (ETS1)		
<b>MS.ETS1.1 Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.</b>		
<b>Clarification Statement:</b> Emphasis is on understanding how to identify and clearly describe the important factors (criteria) and limitations (constraints) of a design problem. <b>Assessment Boundary:</b> Assessment is limited to identifying and defining basic criteria and constraints for a design problem, with a focus on clarity and precision in describing the problem. Assessment also evaluates a students' understanding of how scientific principles relate to the design process, as well as the design's impact on both people and the environment.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Defining Problems</b> <ul style="list-style-type: none"> <li>Define a design problem that can be solved through the development of an object, tool, process, or system, and includes multiple criteria and constraints, including scientific knowledge that may limit possible solutions.</li> </ul>	<b>Defining and Delimiting Engineering Problems</b> <ul style="list-style-type: none"> <li>The more precisely a design task's criteria and constraints can be defined, the more likely it is that the designed solution will be successful. Specification of constraints includes consideration of scientific principles and other relevant knowledge that are likely to limit possible solutions.</li> </ul> <b>Influence of Science, Engineering, and Technology on Society and the Natural World</b> <ul style="list-style-type: none"> <li>All human activity draws on natural resources and has both short and longer term consequences, positive as well as negative, for the health of people and the natural environment.</li> <li>The uses of technologies and limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions.</li> </ul>	<b>System and System Models</b> <ul style="list-style-type: none"> <li>Models can be used to represent systems and their interactions - such as inputs, processes, and outputs - and energy, matter, and information flows within the systems.</li> </ul>

Middle School (MS)		
Engineering Design (ETS1)		
<b>MS.ETS1.2 Evaluate competing design solutions using a systematic process to determine how well they meet the criteria and constraints of the problem.</b>		
<b>Clarification Statement:</b> Emphasis is applying a structured approach to evaluating multiple design solutions, including using qualitative and quantitative data as evidence to support evaluations of the design solutions. Example criteria and constraints could include functionality, cost, safety, and environmental impact. <b>Assessment Boundary:</b> Assessment is limited to comparing two or three design solutions for a given problem, focusing on how well they meet the established criteria and constraints.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Engaging in Argument from Evidence</b> <ul style="list-style-type: none"><li>Evaluate competing design solutions based on jointly developed and agreed-upon design criteria.</li></ul>	<b>Developing Possible Solutions</b> <ul style="list-style-type: none"><li>There are systematic processes for evaluating solutions with respect to how well they meet the criteria and constraints of a problem.</li></ul>	<b>Structure and Function</b> <ul style="list-style-type: none"><li>Structures can be designed to serve particular functions by taking into account properties of different materials, and how materials can be shaped and used.</li></ul>

Middle School (MS)		
Engineering Design (ETS1)		
<b>MS.ETS1.3 Analyze data from tests to determine similarities and differences among several design solutions to identify the best characteristics of each that can be combined into a new solution to better meet the criteria for success.</b>		
<b>Clarification Statement:</b> Emphasis is on analyzing data from multiple tests of different design solutions to identify patterns, strengths, and weaknesses, then using that information to propose different ways of combining the best features of each solution to create a new, improved design that meets the criteria better. <b>Assessment Boundary:</b> Assessment is limited to analyzing test data from two or three design solutions at a time. Focus is on basic comparisons and reasoning to suggest improvements to the design.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Analyzing and Interpreting Data</b> <ul style="list-style-type: none"><li>Analyze and interpret data to determine similarities and differences in findings.</li></ul>	<b>Developing Possible Solutions</b> <ul style="list-style-type: none"><li>There are systematic processes for evaluating solutions with respect to how well they meet the criteria and constraints of a problem.</li><li>Sometimes parts of different solutions can be combined to create a solution that is better than any of its predecessors.</li></ul> <b>Optimizing the Design</b> <ul style="list-style-type: none"><li>Although one design may not perform the best across all tests, identifying the characteristics of the design that performed the best in each test can provide useful information for the redesign process - that is, some of those characteristics may be incorporated into the new design.</li></ul>	<b>Patterns</b> <ul style="list-style-type: none"><li>Graphs, charts, and images can be used to identify patterns in data.</li></ul>

Middle School (MS)		
Engineering Design (ETS1)		
<b>MS.ETS1.4 Develop a model to generate data for iterative testing and modification of a proposed object, tool, or process such that an optimal design can be achieved.</b>		
<p><b>Clarification Statement:</b> Data should be gathered through multiple rounds of testing, with students modifying their designs based on feedback from each round to generate new data. Emphasis is on optimizing the design to better meet the established criteria and constraints. <b>Assessment Boundary:</b> Assessment is limited to simple models that can be tested and modified. Focus should be on the iterative process of testing and modification rather than the creation of highly complex or professional-level models.</p>		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Developing and Using Models</b> <ul style="list-style-type: none"><li>Develop a model to generate data to test ideas about designed systems, including those representing inputs and outputs.</li></ul>	<b>Developing Possible Solutions</b> <ul style="list-style-type: none"><li>A solution needs to be tested, and then modified on the basis of the test results, in order to improve it.</li><li>Models of all kinds are important for testing solutions.</li></ul> <b>Optimizing the Design Solution</b> <ul style="list-style-type: none"><li>The iterative process of testing the most promising solutions and modifying what is proposed on the basis of the test results leads to greater refinement and ultimately to an optimal solution.</li></ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"><li>Models are limited in that they only represent certain aspects of the system under study.</li></ul>

High School (HS)		
Engineering Design (ETS1)		
<b>HS.ETS1.1 Analyze a major global challenge to specify qualitative and quantitative criteria and constraints for solutions that account for societal needs and wants.</b>		
<p><b>Clarification Statement:</b> Emphasis is on analyzing a global challenge (e.g., sustainable energy, air quality) and specifying the criteria and constraints for potential solutions, which could include societal needs (e.g., health, economy) and wants (e.g., technological advancement), as well as environmental impacts. <b>Assessment Boundary:</b> Assessment focuses on how students apply basic principles of system design and problem-solving to identify qualitative and quantitative criteria and constraints for a solution.</p>

High School (HS)		
Engineering Design (ETS1)		
<b>HS.ETS1.4 Use a computer simulation to model the impact of proposed solutions to a complex real-world problem with numerous criteria and constraints on interactions within and between systems relevant to the problem.</b>		
<b>Clarification Statement:</b> Emphasis is on how the proposed solution affects various interacting systems that are relevant to the problem, considering numerous criteria and constraints. Use of simulations can help students explore the effects of multiple variables and see the interactions and trade-offs between different aspects of a solution. <b>Assessment Boundary:</b> Assessment is limited to using simulations that allow for analyzing relationships between different factors and making informed decisions based on the outcomes.		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>Using Computational Thinking</b> <ul style="list-style-type: none"><li>Use computer simulations to predict the effects of a design solution on systems and/or interactions between systems.</li></ul>	<b>Developing Possible Solutions</b> <ul style="list-style-type: none"><li>Both physical models and computers can be used in various ways to aid in the engineering design process. Computers are useful for a variety of purposes, such as running simulations to test different ways of solving a problem or to see which one is most efficient or economical; and in making a persuasive presentation to a client about how a given design will meet his or her needs.</li></ul>	<b>Systems and System Models</b> <ul style="list-style-type: none"><li>Models (e.g., physical, mathematical, computer) can be used to simulate systems and interactions - including energy, matter, and information flows - within and between systems at different scales.</li></ul>
