Re: Martin Marietta/Material Producers Davis Quarry Q3 2018 Monitoring Report

Dear Mr. Cogburn:

Attached please find the Q3 2018 monitoring report and associated data and calculations for Martin Marietta/Material Producers' Davis Quarry. We continue to have problems with the weather station and are in the process of replacing it. Mesonet weather rainfall and evapotranspiration data from Sulphur were used for the missing data.

In July we discovered that our freshwater pond had significantly silted in. This means that we are storing less water in our circuit than we thought and our recharge to the aquifer and to surface water has been higher than calculated over the past couple years. As a result of ongoing efforts to repair and clear our freshwater pond, we are temporarily not able to monitor water depths in the pond. Since the water collection pond in the pit is now being used to store the water while we resolve the freshwater pond issue, we have temporarily lost access to the data logger in the pit. We have been able to use drone data to get relative elevations for the water in the pit.

As is typical at the Davis Quarry, in Q3 we see more precipitation and runoff entering the pit than the total water we use from the pit. Also typically, we do not see a rise in water levels in the pit that correspond to the additional precipitation and runoff that we know is entering the pit and not being used. Thus we still see a net decrease of water within the pit indicating that we continue to augment groundwater through the pit.

Sincerely,

A handwritten signature in cursive script that reads 'Robin L. Simmons'.
