## Pit Water Assessment Summary

### March 2024 Update

### Prepared March 13, 2024

With Regards to our annual update for the Pit Water Assessment Summary that was originally submitted to the OWRB July 1, 2019.

As of March 13, 2024, all estimates in the July 1, 2019 pit water summary and additional information submitted Dec 17, 2019, as well as any updates prior to March 13, 2024 remain unchanged at this time.

Additional cave research on the property and immediately around the mines site, confirm that groundwater levels are at least 20ft below the surface and beyond our expected mining depth.

#### Mine Site Update:

With regards to the status of our mining operation; At the time of preparation of this update, no mining has yet occurred onsite. Mining is expected to start around April 2024. As soon as startup and active mining begins, we will include an update to the Pit Water Assessment Summary to make note of the official startup date, as well as any changes that may occur during this time.
