## SUMMARY

- Basin 7 - Muddy Boggy River - 1 demands are supplied by a combination of surface water, groundwater, and out-of-basin supplies.
- Water demand (withdrawal) is projected to increase by 201 acre-feet per year (25%) between 2020 and 2075.
- Physical surface water gaps are projected in Basin 7 as early as 2030 and will continue through 2075.
- Physical alluvial groundwater depletions are projected in Basin 7 as early as 2035 and will continue through 2075.
- Physical bedrock groundwater depletions are projected in Basin 7 as early as 2030 and will diminish by 2045.
- Basin 7 is projected to have surface water available for appropriation through 2075, but its permitting may be subject to provisions of the 2016 Water Settlement Agreement.
- Basin 7 is projected to have groundwater available for appropriation through 2075.
- To mitigate projected water supply shortages in this basin, the following strategies will typically be most effective:
  - Reduce water demand through conservation, water loss reduction, and other activities (PS, SSI, OG, TE). **WSS**
  - Reduce water demands through agricultural water saving options (CI, LS). **WSS**
  - Continue/increase reliance on in-basin groundwater (all sectors). **WSS** **WDI**
  - Water transfers (all sectors). **WM** **WSS**

Refer to the **“Guide to Region and Basin Fact Sheets”** for a description of the types of information detailed in this fact sheet.

**Water Demand Sectors:** PS = Public Supply, SSI = Self-supplied Industrial, OG = Oil & Gas, TE = Thermoelectric Power, CI = Crop Irrigation, LS = Livestock, SSD = Self-supplied Domestic

**OCWP Statewide Recommendations** are designed to address current and anticipated water supply challenges and are noted throughout this fact sheet with the following icons: **WIW** Water Infrastructure & Workforce, **WM** Water Management, **WSS** Water Supplies & Storage, and **WDI** Water Data & Information

## Population

How is the population expected to change in the future?

2020	2030	2035	2045	2060	2075
5,726	5,668	5,481	5,235	4,996	4,673

## Water Demand Projections

How much water is needed to meet Oklahomans' needs?

Basin 7 accounts for approximately 2% of the overall water demands of the Blue-Boggy Region.

### Total Demand by Sector (AFY)

	2020	2030	2035	2045	2060	2075
Self-supplied Domestic	93	93	90	86	82	77
Self-supplied Industrial	-	-	-	-	-	-
Crop Irrigation	279	344	366	412	482	546
Livestock	408	396	396	385	371	358
Oil & Gas	11	11	11	11	11	11
Public Supply	10	10	9	9	9	8
Thermoelectric Power	-	-	-	-	-	-
<b>Total</b>	<b>801</b>	<b>854</b>	<b>872</b>	<b>904</b>	<b>955</b>	<b>1,002</b>

AFY = acre-feet per year; Small differences may result due to rounding.

## Physical Water Shortages

Will there be enough "wet water" physically available to meet anticipated needs?

WIW WM WSS

	Magnitude (AFY)					Frequency <sup>1</sup>
	2030	2035	2045	2060	2075	2075
Surface Water Gap	9	26	59	119	158	4%
Alluvial Groundwater Depletion	-	1	1	2	3	4%
Bedrock Groundwater Depletion	1	1	-	-	-	N/A

1. Probability of a water shortage occurring in at least one month of the year.

## Legal Water Availability

Will there be water available for permitting after meeting 2075 demands?

WM WSS

Estimated Surface Water available for appropriation in 2075 (AFY)	Inside 2016 Water Settlement Area? <sup>1</sup>	Is there a downstream mainstem restriction? <sup>2</sup>	Estimated Groundwater available for appropriation in 2075 (AFY)
260,200	Yes	No	755,520

- If, yes – basin wholly or partially subject to the provisions of the 2016 Water Settlement Agreement.
- If, yes – mainstem restriction may impact water available for appropriation within the basin.

## Water Management Strategies

What approaches are most viable for meeting future needs and mitigating shortages?

WSS WDI WIW WM

Water Management Category	Demand Sector	Basin 7 Evaluation
Demand Management	PS, SSI, OG, TE	Partially Effective - Shortages Remain
Agriculture Options	CI, LS	Partially Effective - Shortages Remain
Increase Reliance on In-Basin Surface Water	All sectors	May Increase Shortages - Use with Other Strategies
Increase Reliance on In-Basin Groundwater	All sectors	Effective at Meeting Future Demands
Stormwater Capture & Use	PS, SSI	Ineffective at Meeting Future Demands
Reuse	PS, SSI	Ineffective at Meeting Future Demands
Water Transfers	All sectors	Potentially Effective with Local Variability

In addition to the water management strategies, water users need:

- Options to address water quality concerns, which could include expanding source water protection programs and expanding water quality studies.
- Ways to address infrastructure limitations, which could include additional water funding from the State, Federal, and/or public-private partnerships, and by providers setting water rates that fully fund system operation and maintenance.
