

BASIN 64

Middle Cimarron River / Central Region

Interactive maps can be viewed through the OCWP dashboards, accessible at oklahoma.gov/owrb/water-planning

SUMMARY

- Basin 64 - Middle Cimarron River demands are supplied by a combination of surface water, groundwater, and out-of-basin supplies.
- Water demand (withdrawal) is projected to increase by 33,715 acre-feet per year (36%) between 2020 and 2075.
- Physical surface water gaps are projected in Basin 64 as early as 2030 and will continue through 2075.
- Physical alluvial groundwater depletions are projected in Basin 64 as early as 2030 and will continue through 2075.
- Physical bedrock groundwater depletions are projected in Basin 64 as early as 2030 and will continue through 2075.
- Basin 64 is projected to have surface water available for appropriation through 2075.
- Basin 64 is projected to have groundwater available for appropriation through 2075.
- To mitigate projected water supply shortages in this basin, the following strategies will typically be most effective:
 - Reduce water demand through conservation, water loss reduction, and other activities (PS, SSI, OG, TE). **WSS**
 - Reduce water demands through agricultural water saving options (CI, LS). **WSS**
 - Stormwater capture and use (PS, SSI). **WM WSS**
 - Water reuse (PS, SSI). **WM WSS**
 - Water transfers (all sectors). **WM WSS**

OWRB Water
Planning Page
oklahoma.gov/owrb/water-planning

Refer to the “Guide to Region and Basin Fact Sheets” for a description of the types of information detailed in this fact sheet.

Water Demand Sectors: PS = Public Supply, SSI = Self-supplied Industrial, OG = Oil & Gas, TE = Thermoelectric Power, CI = Crop Irrigation, LS = Livestock, SSD = Self-supplied Domestic

OCWP Statewide Recommendations are designed to address current and anticipated water supply challenges and are noted throughout this fact sheet with the following icons: **WIW** Water Infrastructure & Workforce, **WM** Water Management,

WSS Water Supplies & Storage, and **WDI** Water Data & Information

Population

How is the population expected to change in the future?

2020	2030	2035	2045	2060	2075
245,902	264,091	275,040	299,505	343,893	381,874

Water Demand Projections

How much water is needed to meet Oklahomans' needs?

Basin 64 accounts for approximately 29% of the overall water demands of the Central Region.

Total Demand by Sector (AFY)

	2020	2030	2035	2045	2060	2075
Self-supplied Domestic	1,907	2,029	2,092	2,244	2,508	2,745
Self-supplied Industrial	-	-	-	-	-	-
Crop Irrigation	46,647	55,884	57,175	59,523	62,511	65,858
Livestock	5,688	5,614	5,633	5,580	5,512	5,482
Oil & Gas	9,154	9,154	9,154	9,154	9,154	9,154
Public Supply	29,356	31,448	32,545	35,002	39,426	43,228
Thermoelectric Power	-	-	-	-	-	-
Total	92,753	104,129	106,600	111,503	119,112	126,467

AFY = acre-feet per year; Small differences may result due to rounding.

Physical Water Shortages

Will there be enough "wet water" physically available to meet anticipated needs?

WIW WM WSS

	Magnitude (AFY)					Frequency ¹
	2030	2035	2045	2060	2075	2075
Surface Water Gap	393	684	1,422	2,782	4,590	89%
Alluvial Groundwater Depletion	5,966	6,926	8,800	11,482	14,248	34%
Bedrock Groundwater Depletion	3,206	3,380	3,706	4,260	4,864	N/A

1. Probability of a water shortage occurring in at least one month of the year.

Legal Water Availability

Will there be water available for permitting after meeting 2075 demands?

WM WSS

Estimated Surface Water available for appropriation in 2075 (AFY)	Inside 2016 Water Settlement Area? ¹	Is there a downstream mainstem restriction? ²	Estimated Groundwater available for appropriation in 2075 (AFY)
370,300	No	No	6,071,180

- If, yes – basin wholly or partially subject to the provisions of the 2016 Water Settlement Agreement.
- If, yes – mainstem restriction may impact water available for appropriation within the basin.

Water Management Strategies

What approaches are most viable for meeting future needs and mitigating shortages?

WSS WDI WIW WM

Water Management Category	Demand Sector	Basin 64 Evaluation
Demand Management	PS, SSI, OG, TE	Partially Effective - Shortages Remain
Agriculture Options	CI, LS	Partially Effective - Shortages Remain
Increase Reliance on In-Basin Surface Water	All sectors	Ineffective at Meeting Future Demands
Increase Reliance on In-Basin Groundwater	All sectors	May Increase Shortages - Use with Other Strategies
Stormwater Capture & Use	PS, SSI	Potentially Effective with Local Variability
Reuse	PS, SSI	Effective at Meeting Future Demands
Water Transfers	All sectors	Effective at Meeting Future Demands

In addition to the water management strategies, water users need:

- Options to address water quality concerns, which could include expanding source water protection programs and expanding water quality studies.
- Ways to address infrastructure limitations, which could include additional water funding from the State, Federal, and/or public-private partnerships, and by providers setting water rates that fully fund system operation and maintenance.
